- (g) In reviewing such requests, the board of zoning adjustments shall consider all technical evaluations, relevant factors, and all standards specified in this and other sections of this chapter.
- (h) Conditions for variances:
 - (1) A variance shall be issued only when there is:
 - a. A finding of good and sufficient cause;
 - b. A determination that failure to grant the variance would result in exceptional hardship; and
 - c. A determination that the granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, create nuisance, cause fraud on or victimization of the public, or conflict with existing local laws or ordinances.
 - (2) The provisions of this chapter are minimum standards for flood loss reduction, therefore any deviation from the standards must be weighed carefully. Variances shall only be issued upon a determination that the variance is the minimum necessary, considering the flood hazard, to afford relief; and, in the instance of an historic structure, a determination that the variance is the minimum necessary so as not to destroy the historic character and design of the building.
 - (3) Any applicant to whom a variance is granted shall be given written notice specifying the difference between the base flood elevation and the elevation of the proposed lowest floor and stating that the cost of flood insurance will be commensurate with the increased risk to life and property resulting from the reduced lowest floor elevation.
 - (4) The city engineer shall maintain the records of all appeal actions and report any variances to the Federal Emergency Management Agency and the state department of economic and community affairs/office of water resources upon request.
- (i) Upon consideration of the factors listed above and the purposes of this chapter, the board of zoning adjustments may attach such conditions to the granting of variances as it deems necessary to further the purposes of this chapter.

(Ord. No. 99-2, Art. 5, 2-2-99; Ord. No. 2006-36, Art. 5, 9-19-06)

Secs. 7-35—7-50. - Reserved.

ARTICLE III. - PROVISIONS FOR FLOOD HAZARD REDUCTION

Sec. 7-51. - General standards.

In all areas of special flood hazard the following provisions are required:

- (1) New construction and substantial improvements of existing structures shall be anchored to prevent flotation, collapse or lateral movement of the structure;
- (2) New construction and substantial improvements of existing structures shall be constructed with materials and utility equipment resistant to flood damage;
- (3) New construction and substantial improvements of existing structures shall be constructed by methods and practices that minimize flood damage;
- (4) Elevated buildings. All new construction or substantial improvements of existing structures that include any fully enclosed area located below the lowest floor formed by foundation and other exterior walls shall be designed so as to be an unfinished or flood-resistant enclosure. The enclosure shall be designed to equalize hydrostatic flood forces on exterior walls by allowing for the automatic entry and exit of floodwaters.
 - a. Designs for complying with this requirement must either be certified by a professional engineer or architect or meet the following minimum criteria:
 1. Provide a minimum of two openings having a total net area of not less than one square inch for every square foot of enclosed area subject to flooding;
 2. The bottom of all openings shall be no higher than one foot above grade; and,
 3. Openings may be equipped with screens, louvers, valves or other coverings or devices provided they permit the automatic flow of floodwater in both directions.
 - b. So as not to violate the "lowest floor" criteria of this chapter, the unfinished or flood resistant enclosure shall only be used for parking of vehicles, limited storage of maintenance equipment used in connection with the premises, or entry to the elevated area; and,
 - c. The interior portion of such enclosed area shall not be partitioned or finished into separate rooms.
- (5) All heating and air conditioning equipment and components, all electrical, ventilation, plumbing, and other service facilities shall be designed and/or located so as to prevent water from entering or accumulating within the components during conditions of flooding.
- (6) Manufactured homes shall be anchored to prevent flotation, collapse, or lateral movement. Methods of anchoring may include, but are not limited to, use of over-the-top or frame ties to ground anchors. This standard shall be in addition to and consistent with applicable state requirements for resisting wind forces.
- (7) New and replacement water supply systems shall be designed to minimize or eliminate infiltration of floodwaters into the system;
- (8) New and replacement sanitary sewage systems shall be designed to minimize or eliminate infiltration of floodwaters into the systems and discharges from the systems into floodwaters;
- (9) On-site waste disposal systems shall be located and constructed to avoid impairment to them or contamination from them during flooding, and;
- (10) Any alteration, repair, reconstruction or improvement to a structure which is not compliant with the provisions of this chapter, shall be undertaken only if the nonconformity is not furthered, extended or replaced.

(Ord. No. 99-2, Art. 4, § B, 2-2-99; Ord. No. 2006-36, Art. 4, § A, 9-19-06)

Sec. 7-52. - Specific standards.

In all areas of special flood hazard designated as A1-30, AE, AH, A (with estimated BFE), the following provisions are required:

- (1) *New construction and substantial improvements.* Where base flood elevation data are available, new construction or substantial improvement of any structure or manufactured home shall have the lowest floor, including basement, elevated no lower than one foot above the base flood elevation. Should solid foundation perimeter walls be used to elevate a structure, openings sufficient to facilitate the unimpeded movements of floodwaters shall be provided in accordance with standards of section 7-51(4), Elevated Buildings.
- (2) *Nonresidential construction.* New construction or the substantial improvement of any nonresidential structure located in A1-30, AE, or AH zones, may be flood-proofed in lieu of elevation. The structure, together with attendant utility and sanitary facilities, must be designed to be water tight to one foot above the base flood elevation, with walls substantially impermeable to the passage of water, and structural components having the capability of resisting hydrostatic and hydrodynamic loads and the effect of buoyancy. A registered professional engineer or architect shall certify that the design and methods of construction are in accordance with accepted standards of practice for meeting the provisions above, and shall provide such certification to the official as set forth above and in section 7-33(6).
- (3) *Standards for manufactured homes and recreational vehicles.* Where base flood elevation data are available:
 - a. All manufactured homes placed or substantially improved on: (i) individual lots or parcels, (ii) in new or substantially improved manufactured home parks or subdivisions, (iii) in expansions to existing manufactured home park or subdivisions, or (iv) on a site in an existing manufactured home park or subdivision where a manufactured home has incurred substantial damage as the result of a flood, must have the lowest floor including basement elevated no lower than one foot above the base flood elevation.
 - b. Manufactured homes placed or substantially improved in an existing manufactured home park or subdivision may be elevated so that either:
 1. The lowest floor of the manufactured home is elevated no lower than one foot above the level of the base flood elevation, or
 2. Where no base flood elevation exists, the manufactured home chassis and supporting equipment is supported by reinforced piers or other foundation elements of at least equivalent strength and is elevated to a maximum of 60 inches (five feet).
 - c. All manufactured homes must be securely anchored to an adequately anchored foundation system to resist flotation, collapse and lateral movement. (Refer: section 7-51)
 - d. All recreational vehicles placed on sites must either:
 1. Be on the site for fewer than 180 consecutive days, fully licensed and ready for highway use if it is licensed, on its wheels or jacking system, attached to the site only by quick disconnect type utilities and security devices, and has no permanently attached structures or additions; or
 2. The recreational vehicle must meet all the requirements for new construction, including the anchoring and elevation requirements of subsection (3)a—c, above.

(Ord. No. 99-2, Art. 4, § B, 2-2-99; Ord. No. 2006-36, Art. 4, § B, 9-19-06)

Sec. 7-53. - Building standards for streams without established base flood elevations and/or floodway (A Zones).

Located within the areas of special flood hazard established in section 7-7, where streams exist but no base flood data have been provided (A zones), the following provisions apply:

- (1) When base flood elevation data or floodway data have not been provided in accordance with section 7-7, then the city engineer shall obtain, review, and reasonably utilize any scientific or historic base flood elevation and floodway data available from a federal, state, or other source, in order to administer the provisions of article III. Only if data are not available from these sources, then the following provisions (2) and (3) shall apply:
- (2) No encroachments, including structures or fill material, shall be located within an area equal to the width of the stream or 25 feet, whichever is greater, measured from the top of the stream bank, unless certification by a registered professional engineer is provided demonstrating that such encroachment shall not result in any increase in flood levels during the occurrence of the base flood discharge.
- (3) All development in zone A must meet the requirements of section 7-51 and section 7-52(1)—(3).
- (4) In special flood hazard areas without base flood elevation data, new construction and substantial improvements of existing structures shall have the lowest floor of the lowest enclosed area (including basement) elevated no less than three feet above the highest adjacent grade at the building site. Also, in the absence of a base flood elevation, a manufactured home must also meet the elevation requirements of section 7-52(3)b.2 in that the structure must be elevated to a maximum of 60 inches (five feet). Openings sufficient to facilitate the unimpeded movements of floodwaters shall be provided in accordance with standards of section 7-51(4), Elevated Buildings.

The city engineer shall certify the lowest floor elevation level and the record shall become a permanent part of the permit file.

(Ord. No. 99-2, Art. 4, § C, 2-2-99; Ord. No. 2006-36, Art. 4, § D, 9-19-06)

Sec. 7-54. - Standards for areas of shallow flooding (AO zones).

Areas of special flood hazard established in section 7-7, may include designated "AO" shallow flooding areas. These areas have base flood depths of one to three feet above ground, with no clearly defined channel. The following provisions apply:

- (1) All new construction and substantial improvements of residential and nonresidential structures shall have the lowest floor, including basement, elevated to the flood depth number specified on the flood insurance rate map (FIRM) above the highest adjacent grade. If no flood depth number is specified, the lowest floor, including basement, shall be elevated at least two feet above the highest adjacent grade. Openings sufficient to facilitate the unimpeded movements of floodwaters shall be provided in accordance with standards of section 7-51(4), Elevated Buildings.

The city engineer shall certify the lowest floor elevation level and the record shall become a permanent part of the permit file.

- (2) New construction or the substantial improvement of a nonresidential structure may be flood-proofed in lieu of elevation. The structure, together with attendant utility and sanitary facilities, must be designed to be water tight to the specified FIRM flood level or two feet (if no map elevation is listed), above highest adjacent grade, with walls substantially impermeable to the passage of water, and structural components having the capability of resisting hydrostatic and hydrodynamic loads and the effect of buoyancy. A registered professional engineer or architect

shall certify that the design and methods of construction are in accordance with accepted standards of practice for meeting the provisions above, and shall provide such certification to the official as set forth above and as required in subsections 7-32(1)c. and (2).

- (3) Drainage paths shall be provided to guide floodwater around and away from any proposed structure.

(Ord. No. 99-2, Art. 4, § D, 2-2-99; Ord. No. 2006-36, Art. 4, § E, 9-19-06)

Sec. 7-55. - Floodways.

Located within areas of special flood hazard established in section 7-7, are areas designated as floodway. A floodway may be an extremely hazardous area due to velocity floodwaters, debris or erosion potential. In addition, the area must remain free of encroachment in order to allow for the discharge of the base flood without increased flood heights. Therefore, the following provisions shall apply:

- (1) The community shall select and adopt a regulatory floodway based on the principle that the area chosen for the regulatory floodway must be designed to carry the waters of the base flood, without increasing the water surface elevation of that flood more than one foot at any point;
- (2) Encroachments are prohibited, including fill, new construction, substantial improvements or other development within the adopted regulatory floodway. Development may be permitted however, provided it is demonstrated through hydrologic and hydraulic analyses performed in accordance with standard engineering practice that the encroachment shall not result in any increase in flood levels or floodway widths during a base flood discharge. A registered professional engineer must provide supporting technical data and certification thereof;
- (3) Require, until a regulatory floodway is designated, that no new construction, substantial improvements, or other development (including fill) shall be permitted within zones A1-30 and AE on the community's FIRM, unless it is demonstrated that the cumulative effect of the proposed development, when combined with all other existing and anticipated development, will not increase the water surface elevation of the base flood more than one foot at any point within the community.
- (4) Only if subsection (2) or (3) above are satisfied, then any new construction or substantial improvement shall comply with all other applicable flood hazard reduction provisions of article III.

(Ord. No. 99-2, Art. 4, § E, 2-2-99; Ord. No. 2006-36, Art. 4, § C, 9-19-06)

Editor's note— Prior to the enactment of Ord. No. 2006-36, adopted Sept. 21, 2006, § 7-55 pertained to coastal high hazard areas (V zones).

Sec. 7-56. - Standards for subdivisions.

- (a) All subdivision proposals shall be consistent with the need to minimize flood damage;
- (b) All subdivision proposals shall have public utilities and facilities such as sewer, gas, electrical and water systems located and constructed to minimize flood damage;
- (c) All subdivision proposals shall have adequate drainage provided to reduce exposure to flood hazards, and;
- (d) Base flood elevation data shall be provided for subdivision proposals and all other proposed development, including manufactured home parks and subdivisions, greater than 50 lots or five acres, whichever is the lesser.

(Ord. No. 99-2, Art. 4, § F, 2-2-99; Ord. No. 2006-36, Art. 4, § F, 9-19-06)

Chapter 7.5 - GARBAGE, REFUSE AND TRASH^[1]

Footnotes:

--- (1) ---

Editor's note— Ord. No. 2004-02, §§ 1—16, adopted Jan. 6, 2004, repealed Ch. 7.5, §§ 7.5-1—7.5-16, in its entirety and enacted a new Ch. 7.5, §§ 7.5-1—7.5-16 to read as set out herein. Former Ch. 7.5 pertained to similar material and derived from Ord. No. 2000-52, §§ 1, 2, adopted Aug. 15, 2000.

Sec. 7.5-1. - Definitions.

For the purposes of this article, the following words and phrases shall have the meanings respectively ascribed to them in this chapter:

Ashes. The residue from the burning of wood, coal, coke or other combustible materials.

Customer. Shall mean the occupant and/or the owner of the premises.

Debris. Shall mean materials not categorized as trash or garbage.

Garbage. Shall mean and include all waste and discarded foods, animal and vegetable matter and all other putrescible waste matter, including food containers, drink containers, food cans and food packaging materials, but not including liquid waste or body waste.

Garbage container. Shall mean and include a receptacle or can having a capacity of not more than 32 gallons of substantial metal or weather resistant plastic construction, with cans having a tight fitting lid or cover, with not less than one handle on the lid of cover and two handles on the side of the receptacle which can be conveniently lifted or moved. The total weight of the container and contents shall not exceed 60 pounds.

Premises. Any residential unit, dwelling, flat, rooming house, apartment house, townhouse, condominium, hospital, school, hotel, club, restaurant, boarding house, eating place, shop, place of business, commercial establishment, manufacturing establishment, courthouse, jail, city hall, post office or other public building.

Posting of notice. Placing a notice of any violation on an entrance or exit of the premises.

Producers. Shall mean any occupant, owner, lessee or other party packaging or setting material in rights-of-way for pick-up.

Route. The particular streets, alleys and right of ways, scheduled by the city for garbage pick-up on particular days of each week.

Sanitation department. The sanitation department of the City of Irondale, Alabama.

Trash. Nonputrescible solid wastes consisting of both combustible and noncombustible wastes, such as paper, cardboard, tin cans, yard clippings, grass cuttings, leaves, tree limbs, wood, glass, bedding, crockery, metals and other nonputrescible solid waste substances not included in the definition of "garbage" as it appears in this chapter.

(Ord. No. 2004-02, § 1, 1-6-04; Ord. No. 2008-46, § 1, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-2. - Collection by the city (generally).

To the extent prescribed in this chapter, trash and garbage accumulated within the corporate boundaries of the city shall be collected, conveyed and disposed of by the sanitation department of the

city under the supervision of the director of public works, who is responsible for enforcement of this chapter.

(Ord. No. 2008-46, § 2, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-3. - Categories not to be collected.

The following categories of trash, debris and garbage will not be collected, conveyed or disposed of by the city. The actual producers thereof, i.e. owners, lessees, occupants and other parties entering on the premises on which such trash, debris and garbage is accumulated, shall be responsible for collecting, conveying and disposing of such trash, debris and garbage in accordance with the provisions of subsection 7.5-8(3):

- (1) Dangerous materials and substances such as poisons, acids, caustics, infected materials, hot ashes, highly inflammable materials and explosives, including but not limited to paint cans (unless empty and open or filled with sand or dirt), lead plate batteries, and any and all material considered hazardous waste by the state department of environmental management;
- (2) Rocks, dirt, earth;
- (3) Rubber, rubber products (i.e. tires), roofing and similar materials;
- (4) Any debris, trash or other materials resulting from demolition, repair, excavation or construction of buildings or structures by contractor, or from work performed by persons in landscaping, tree service, plumbing, heating and cooling and other like businesses, or from a resident performing job and serving as contractor. It shall be the responsibility of the owner to cause this waste to be removed. This subsection does not, however, prohibit a resident from performing minor landscaping work on the resident's property and disposing of the resulting debris in conformance with the terms of this chapter;
- (5) Solid wastes resulting from industrial or commercial processes;
- (6) [Intentionally omitted]
- (7) Trash, debris and garbage not prepared for collection by the city in accordance with the provisions of this chapter;
- (8) Dog and cat litter and the clean-up from animal pens;
- (9) [Intentionally omitted]
- (10) Leaves, grass and cuttings not in a plastic bag or in a container or not placed in the collection service area as defined in section 7.5-4(2) below.

The deposit of any of the foregoing categories of trash, debris and materials in containers or on the street, alley or collection service area as defined in section 7.5-4(2) below for collection shall be deemed a violation of this chapter.

(Ord. No. 2004-02, § 3, 1-6-04; Ord. No. 2005-63, 10-4-05; Ord. No. 2008-46, § 3, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-4. - Service and service requirements.

Service will be provided by the city and the trash and garbage shall be prepared for collection by the residents of the city in the following manner.

- (1) Collection of garbage will be made once weekly. The city shall strive to collect trash and debris on a routine basis. In the event the collection date is a legal holiday or the collection is delayed as a result of circumstances beyond the control of the sanitation department, the collection shall be rescheduled and residents will be notified of an alternate date. Exceptions to this section

may be made in the event of natural disasters or a state of emergency, in the discretion of the mayor.

- (2) Garbage must be stored in a garbage container as herein defined. Use of plastic liner bags or the placement of garbage in plastic trash or garbage bags in the garbage containers is required. Loose garbage placed in containers without being contained in bags will not be collected. Garbage will not be collected from containers which do not meet the city standards. Garbage cans to be emptied, as herein provided, must be outside of basements, garages and other similar enclosed areas, located no further than three feet from the street or alley of the collection route, must be visible and accessible from the public street, private street or alley constituting a part of the route of the city's garbage pickup service, and must not impede or otherwise interfere with any use of the right-of-way. The area which meets all requirements in the preceding sentence shall be referred to in this chapter as the "collection service area". No garbage or garbage container shall be left for more than 24 hours at the collection location after being serviced. It shall be a violation of this chapter for any garbage containers to remain permanently on or at the collection service area. Any owner, occupant, lessee, firm, corporation partnership or other entity who is found to have violated this section of this chapter shall, upon conviction, be punished in accordance with section 1-10 of this Code as adopted on November 10, 1990, or as it may be hereafter amended. Punishment under this section shall be in addition to all other remedies as herein set out and/or contained in any other ordinance.
- (3) No more than three garbage containers, as defined in section 7.5-1, will be removed.
- (4) Logs not exceeding six feet in length and ten inches in diameter will be collected subject to equipment limitations and section 7.5-3.
- (5) Trash, leaves, limbs, bushes, etc. should be placed in the collection service area as herein required. They shall not be placed on the street or in gutters.
- (6) Garbage should be set out by 6:30 a.m. on the morning of scheduled garbage collection service.
- (7) Leaves, grass and cuttings should be placed in a covered container or plastic bag properly secured and placed in the collection service area. Leaves or grass not in a container or plastic bag properly secured will not be picked up. In no instance shall leaves, limbs or vines be placed on the street, over stormwater drains or in gutters. Limbs and vines must be also placed in the collection service area.
- (8) Any dog which harasses city employees in any way must be leashed, chained or locked in a resident's garage or basement, fenced area or kept inside the residence or building on the scheduled days of collection service. Where dogs are kept fenced in, garbage cans must be kept outside the fenced area.
- (9) Garbage, tin cans and other receptacles which have contained food shall, after being drained free of all liquid, be deposited in garbage containers and shall, unless otherwise authorized or directed by the director of public works, be kept in an area not visible from the street until collection day.
- (10) Ashes (including fireplace ashes) shall, after all embers have expired, be deposited in appropriate closed containers, separate and apart from garbage, debris and trash and placed in the collection service area. Such containers shall be fireproof, watertight and equipped with handles adequate to facilitate collection and shall have a capacity of not more than 32 gallons. The total weight of the container and contents shall not exceed 60 pounds.
- (11) Trash (exclusive of leaves, limbs and brush, which must be handled as provided in subsection (5) or (7) above) shall be deposited in trash containers or plastic bags and apart from garbage and ashes. Such containers shall be left for collection in the collection service area. No trash shall be placed in the same container or receptacle with garbage in any amount. Any broken glass or pottery must be placed in a trash container or receptacle and placed for collection as hereinabove provided.

- (12) Trash, debris and garbage not prepared for collection in accordance with the foregoing provisions of this section shall not be collected by the city. Where the failure to comply with such provisions arises by virtue of the failure to properly bag or prepare material for pickup or the use of defective containers, such as containers which leak or which have ragged or sharp edges or other defects, which could hamper or injure city employees and/or other persons engaged in collecting the contents thereof, the owners of such containers or the persons utilizing such containers shall be given 48 hours after notice to correct such defect before such owners or other persons shall be deemed guilty of a violation of this chapter. Notice will be given by placing a tag marked "condemned" on the defective container. The placing of said tag shall be considered properly posted notice of a violation. A garbage container that has been deemed defective or condemned will no longer be serviced by the city. A defective or condemned container placed at curbside or at the collection service area will be picked up by the city only upon the owner's checking of the appropriate box and signing of the condemned tag.

(Ord. No. 2004-02, § 4, 1-6-04; Ord. No. 2005-63, 10-4-05; Ord. No. 2008-46, § 4, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-5. - Powers of public works director.

The public works director or his designated representative shall have authority to implement and enforce the provisions of this chapter.

(Ord. No. 2004-02, § 5, 1-6-04; Ord. No. 2008-46, § 5, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-6. - Dead animals.

Dead animals of less than 75 pounds in weight shall be collected without charge upon request made to the sanitation department or the police department of the city. Such animals must be deposited in appropriate closed containers or plastic bags, separate and apart from other garbage, debris and trash and placed in the collection service area.

It is hereby declared a nuisance and health hazard and in violation of this chapter for a dead animal, regardless of size, to remain undisposed of on any premises within the city for a period of longer than 24 hours duration.

(Ord. No. 2004-02, § 6, 1-6-04; Ord. No. 2008-46, § 6, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-7. - Commercial property and institutions.

Garbage generated by businesses, churches, schools and other private institutions unless excluded herein shall be collected by the city or its representative and disposed of in accordance with health department requirements. Collection shall be on a rotating schedule to provide at least once weekly service to all commercial property. Businesses generating food waste shall utilize a containerized collection system. Businesses generating garbage in excess of eight 32-gallon containers or receptacles per week on a regular basis shall utilize a containerized collection system. All other businesses and institutions shall deposit garbage in garbage containers sufficient to confine all garbage. No loose debris will be collected. Collectors are prohibited from entering any building to make collection. Collections shall be made at the front or rear of all premises or in accordance with this chapter, any other city ordinance or other regulation which takes precedence.

(Ord. No. 2004-02, § 7, 1-6-04; Ord. No. 2008-46, § 7, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-8. - Owner or occupant's duties (generally).

No owner, lessee or other occupant of any premises located within the city shall permit or suffer any trash, garbage or debris to accumulate on such premises. Such accumulation is hereby declared to be a "nuisance" and is prohibited.

Such owner, lessee or other occupant or person shall jointly and severally be responsible for each of the following:

- (1) Providing garbage and trash containers in sufficient size and number, of appropriate design and construction, except as provided in subsection 7.5-4(5) or (7), to accommodate and keep in a safe and sanitary manner all trash and garbage accumulated on such premises between times of collection. Such containers shall be durable, rust resistant, watertight, nonabsorbent construction, equipped with a close fitting cover or lid as hereinabove provided and, if used for storage of ashes, shall be fireproof.
- (2) Depositing into such containers all trash and garbage, except as provided in subsections 7.5-4(5) and (7), from such premises promptly as it accumulates; for keeping such containers in a clean, neat and sanitary condition at all times, which includes tightly securing the lids or covers thereon at all times other than when trash or garbage is being deposited therein or being removed therefrom in accordance with the terms of this chapter; and for generally maintaining the premises in a sanitary condition at all times, which included preventing the access of flies, rodents and animals to such trash and garbage and preventing the soiling of the ground or surface upon which such garbage or waste containers stand.
- (3) Having such trash and garbage not collectible by the city promptly collected, conveyed and disposed of in a manner approved by the county department of health and at the same frequency as the collection service of the city.
- (4) Having such trash and garbage as is collectible by the city prepared for collection in accordance with the provisions of this chapter.

(Ord. No. 2004-02, § 8, 1-6-04; Ord. No. 2008-46, § 8, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-9. - Multiple-family dwellings or buildings and mobile home parks.

The owners, tenants and other occupants of any premises located within the city which is used for business purposes, mobile home parks, or multiple family dwellings shall jointly and severally be responsible for providing a storage area in which shall be kept the garbage containers and trash containers required by this chapter.

It shall be unlawful for any owner, tenant or other occupant of any such property or for any employee, servant, or agent of such person or entity to place or deposit any trash or garbage from such business operation in a trash basket or waste receptacle maintained by the city on the public streets or sidewalks or in any trash or garbage container other than ones located in such storage area.

(Ord. No. 2004-02, § 9, 1-6-04; Ord. No. 2008-46, § 9, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-10. - Unlawful to litter.

It shall be unlawful for any person to throw, cast or otherwise deposit or cause to be thrown, cast or otherwise deposited any paper, garbage, trash, debris, rubbish, containers (either glass, metal or paper) or any other substance of any kind in or upon any curb, gutter, sidewalk, street, avenue, highway, tunnel, sidewalk, park, parkway or lot, vacant or occupied.

It shall be unlawful for any person to sweep or deposit in the public streets, curblines, sidewalks or gutters any solid waste, grass cuttings, limbs, leaves, bushes or any other material or article that would tend to impede the flow of water in the gutters or along the streets or sidewalks or that would tend to clog the storm drainage system or be an obstruction to traffic or pedestrians.

(Ord. No. 2004-02, § 10, 1-6-04; Ord. No. 2008-46, § 10, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-11. - Removal of garbage from garbage containers.

It shall be unlawful for any person to remove any garbage, rubbish, refuse or other like materials from any garbage container except his/her or its own, within the corporate limits of the city after it has been placed therein, except under the orders of an officer, agent or employee of the sanitation department or by some other person removing same for disposal or by any law enforcement agent or other person empowered by law.

(Ord. No. 2004-02, § 11, 1-6-04; Ord. No. 2008-46, § 11, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-12. - Illegal use of another's garbage container to avoid collection fee.

It shall be unlawful for any person or entity not subscribing to the collection service to place their garbage and or trash in a container belonging to another for the purpose of avoiding payment of collection fees. Any such action by any person or entity shall be prima facie evidence of such intent unless proven otherwise by substantial evidence.

(Ord. No. 2004-02, § 12, 1-6-04; Ord. No. 2008-46, § 12, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-13. - Removal of public trash receptacles.

It shall be unlawful for any person to remove or cause to be removed from any street, sidewalk, park or other municipal property in the city any receptacle furnished by or on behalf of the city for the deposit of trash. It shall be unlawful for any person to sit upon, deface, tamper with, mutilate or destroy any such receptacle or cause it to be used in any way which will make it inaccessible for the receipt of trash.

(Ord. No. 2004-02, § 13, 1-6-04; Ord. No. 2008-46, § 13, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-14. - Inspections by health officers; right of health officers to enter at reasonable times; resisting inspection.

Any health officer of the county, the director of public works or such other authorized inspector as may be designated by the director of public works shall, after identifying himself or herself to such persons as may then be present, have the authority to enter at reasonable times upon private property within the city for the purpose of inspecting and investigating such premises with respect to compliance with the terms of this chapter. It shall be unlawful for any person to resist or interfere with such inspection.

(Ord. No. 2004-02, § 14, 1-6-04; Ord. No. 2008-46, § 14, 8-7-08; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-15. - Fees and penalties.

(a) *Garbage.*

- (1) Garbage collection, hauling and disposal service is conducted by the city's sanitation department, a division of the department of public works, and is hereinafter referred to as the "garbage collection service" or "collection service."
- (2) For the garbage collection service rendered during each 12-month period beginning on February 1 of each year, each business, institution or residential unit receiving service or eligible to receive service shall pay to the city a fee, unless said business, institution or

residential unit is subject to and compliant with the provisions of section 7.5-16. The total of said fees should approximate the cost to the city of said service and may be periodically determined and adjusted by the city council by amendatory ordinance.

- (3) Any garbage collection service fee shall be the responsibility and liability of the business, institution or residential owner and/or occupant last listed at each premises unless and until a proper discontinuation of service form is completed and received by the city sanitation department, or until such time as the business, institution or owner/occupant becomes subject to the provisions of section 7.5-16 and complies with the requirements set out therein.
- (b) *Trash.* There is no fee for trash and debris collection as long as such trash or debris is handled in a manner consistent with the requirements of this chapter. Improperly bagged or disposed of trash or debris in violation of this chapter shall, after the posting of one 48-hour notice, result in an assessment against the customer and the collection of a fee on the city's cost of removal of said trash and debris with a minimum of a \$100.00 charge.
- (c) *Multiple-family dwellings or buildings and mobile home parks of more than five units.* For the collection service to be rendered for each 12-month period beginning February 1 of each calendar year, unless amended, any person firm, corporation, institution or other entity owning investment property, rental property or mobile home parks consisting of more than five units within the city shall be responsible for all solid waste fees on each occupied unit or rental parcel. Each person, firm, corporation, institution or other entity in charge or control of each residential unit of a multi-family dwelling or apartment or mobile home park, where the city is furnishing such collection service, shall pay to the city a fee per occupied residential unit or mobile home site as follows:
- If paid monthly \$ 20.00
 - If paid quarterly 60.00
 - If paid semi-annually 110.00
 - If paid annually 220.00
- (d) *Single-family dwelling units.* For the collection service to be rendered for each 12-month period beginning February 1 of each calendar year, unless amended, the persons occupying and in charge or control of each single-family dwelling unit and or/the owner of each single-family dwelling unit shall pay the city a fee per residential unit as follows:
- If paid monthly \$ 20.00
 - If paid quarterly 60.00
 - If paid semi-annually 110.00
 - If paid annually 220.00
- (e) *Business or institution.* For the collection service rendered for each 12-month period beginning February 1 of each calendar year, unless amended, each business or institution receiving service shall pay the city a fee per unit as follows:
- If paid monthly \$ 40.00
 - If paid quarterly 120.00
 - If paid semi-annually 220.00
 - If paid annually 440.00
- (f) *When increases apply for prepaid customers.* Any and all increases in garbage collection fees shall not apply for any period, whether that be quarterly, six-month or 12-month, which has been prepaid

by a customer. After the expiration of said quarter, six-month or 12-month prepayment period, any increase in garbage fees shall apply to the prepaying customer.

(g) *Billing procedures, late charges and delinquent accounts.*

- (1) All bills for collection service shall be rendered on behalf of the city by the city clerk and shall be due and payable in advance within ten days from the date rendered, provided that fees may be paid in installments as hereinabove provided, and provided further, that at the initiation of service, a person, firm, corporation, institution or other entity shall pay at a pro-rata rate for the 12-month period in which service for such person is begun. Upon request of a customer who no longer occupies a residential or business site where fees for collection service were paid, a pro-rata refund will be given for quarterly, semi-annual or annual fees paid in advance.
- (2)
 - a. Payments on bills where collection service is billed jointly with water service shall be first applied to outstanding collection service fees. A monthly late fee of \$7.50 shall then be applied to any outstanding charges for water service. This late fee shall be in addition to the late fee for water service charges as set out in section 18-14(b).
 - b. Where collection service only is billed, in the event payment is not made for the collection service within the time provided in paragraph (1) of this subsection, such payment shall be deemed delinquent and shall bear a late penalty of \$7.50 per month for each month until paid. Furthermore, any collection service only bill which remains unpaid for a period of 90 days or more shall bear interest at the rate of 1½ percent per month from the date of delinquency until all of the outstanding balance is paid in full.
 - c. All fees imposed by this subsection 7.5-15(g)(2) are in addition to all other penalties or remedies, civil or criminal, allowed by this chapter.
- (3) All payments for garbage collection, hauling and disposal service or any other payments made pursuant to the provisions of this chapter shall be made as directed on the bill for said service. Water and/or garbage payments may be paid online; however, said payments may only be made in full. No partial payments may be made online. The city shall have the right to proceed for the collection of delinquent garbage collection service fees, suspend services, or both, if garbage collection service fees are not paid within 30 days after the same shall come due and payable pursuant to Code of Ala. 1975, § 22-27-5. In the event delinquent charges and fees are referred to an attorney for collection, the occupant shall pay all costs of collection including a reasonable attorney's fee, special process server fee (as a part of collection) and court costs if a court action is filed.
- (4) In the event an account becomes delinquent and unpaid for a period of 90 days, any subsequent payment shall be applied in the following order: First, to the costs of collection, including, but not limited to, attorney's fees, special process server fees, and court costs; second, to any and all late charges and outstanding interest as calculated hereinabove; third, to the outstanding delinquent balance; and fourth, to the current charges due, if any.
- (5) Any person, firm, corporation, partnership or other entity, who is found to have violated any provision or section of this chapter shall, upon conviction, be punished with a fine of not less than \$50.00 nor more than \$200.00 for each day that the amount remains unpaid, in accordance with Code of Ala. § 22-27-7, as it may be hereafter amended. Punishment under this section shall be in addition to all other remedies as herein set out in section 7.5-15.
- (6) In addition to all other penalties or remedies contained in this section 7.5-15(g), the city may publish the names and account balances of delinquent garbage customers. However, personal information shall not be published.

(Ord. No. 2004-02, § 15, 1-6-04; Ord. No. 2008-46, § 15, 8-7-08; Ord. No. 2010-26, 7-6-10; Ord. No. 2010-34, §§ 1, 2, 8-17-10; Ord. No. 2010-40, 10-8-10; Ord. No. 2010-50, 11-16-10; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-16. - Mandatory service requirement exemptions.

- (a) A person, household, business, industry or any property owner may store, haul and dispose of his or her own solid wastes on his or her land or otherwise, provided such storage, haulage or disposal is accomplished pursuant to an exemption or certificate of exception granted by either the county department of health or the Alabama Department of Environmental Management, pursuant to Code of Alabama § 22-27-3(a)(3) or § 22-27-3(g).
- (b) No exception, exception fee, or any other review, approval or payment shall be required of any generator for the collection, handling or disposal of its own solid waste using facilities or equipment owned by the generator, its corporate parent, affiliate or subsidiary and duly permitted for such use by the state department of environmental management or its successor in function, in compliance with Code of Alabama § 22-27-3(g) (2).
- (c) Additionally, any household (1) whose sole source of income is social security benefits, or (2) whose head of household is 65 years of age or older and the combined income of all adult residents of said household, including applicant, shall not exceed 75 percent of the Federal Poverty Guidelines (for the year the exemption is being requested), shall be granted an exemption from the payment of any residential garbage collection fees required by this article, consistent with Code of Alabama § 22-27-3(a). Any outstanding and/or delinquent balance incurred prior to the exemption approval date shall not be exempt from the assessment and/or collection procedures described in this chapter. Applications for exemptions shall be filed in the office of the clerk on forms provided and shall be granted or denied by the clerk. The household for which the exemption is being requested must be the primary residence of the applicant and garbage collection service must be registered in the name of the applicant requesting the exemption. As proof of eligibility for exemption, applicant shall provide a certified copy of the most recent year's income tax returns for which the exemption is being requested. If applicant and/or any resident of applicant's household are exempt from filing yearly income tax returns, each shall be required to submit a sworn statement declaring such, and shall additionally provide a current statement of benefits received from social security, and current bank statement. All applications for exemptions must be filed between January 1 and January 31 each year the exemption is being requested. No applications received after January 31 shall be accepted. All exemptions shall be in place for a 12 month period. Renewal of exemption shall not be automatic. Applicant shall grant permission for the agents of the city to investigate any or all parts of the information provided on the application by means of signing said application for exemption.
- (d) It shall be unlawful for any person to willfully misrepresent any information or make any false statements for the purpose of receiving an exemption or maintaining an exemption. Pursuant to the Code of Alabama, 1975, § 22-27-7 violation of any provision of this article shall be a misdemeanor and any person firm or corporation found guilty shall upon conviction be punished by a fine of not less than \$50.00 nor more than \$200.00.

(Ord. No. 2004-02, § 16, 1-6-04; Ord. No. 2004-25, 6-15-04) ; Ord. No. 2008-46, § 16, 8-7-08; Ord. No. [2015-2](#), 1-6-15; Ord. No. [2017-57](#), 6-6-17)

Sec. 7.5-17. - Recycling.

- (a) It shall be unlawful for any person or entity to deposit, place or leave any item in a container marked for recyclable materials other than the following allowed items: junk mail, magazines, clean cardboard boxes, office paper, newspaper, aluminum cans, steel and tin cans, and #1 and #2 plastic bottles. No other items may be placed in a container marked for recyclable materials, including the following non-exhaustive list of prohibited items: plastic bags, Styrofoam, glass, phone books, trash and any item made with #3, #4, #5, #6 or #7 plastic.
- (b) A violation of this section shall carry the following penalty:
 - (1) *First offense.* A first offense shall carry a fine of \$150.00 plus court costs.

- (2) *Second offense.* A second offense shall carry a fine of \$250.00 plus court costs.
 - (3) *Third offense.* A third offense or more shall carry a fine of \$500.00 plus court costs and incarceration in the city jail for a mandatory minimum 48-hour period.
- (c) Recycling services will be provided weekly.

(Ord. No. 2010-13, 4-6-10; Ord. No. [2015-42](#), 3-3-15; Ord. No. [2017-57](#), 6-6-17)

Editor's note— Ord. No. 2010-13, adopted April 6, 2010, was codified herein as § 7.5-17 at the discretion of the editor.

Sec. 7.5-18. - Solid waste operators.

(a) *License required.*

- (1) It is unlawful for any person to operate or cause any other person to operate a motor vehicle upon a public street within the city for the purpose of removing solid waste from a commercial property or construction debris from a residential property located within the city's corporate limits for compensation unless the person that owns or controls the motor vehicle has a valid commercial waste operator's license issued by the city.
- (2) To obtain a commercial solid waste operator's license, application must be made on forms provided by the city for that purpose along with the application fee. The application requires that the applicant:
 - a. State the name under which the operator conducts business, the business address and telephone number;
 - b. State the make and body of each motor vehicle to be used in the city;
 - c. Submit proof of liability insurance for the motor vehicles in the amounts required by state law;
 - d. By submitting the application agrees to abide by and be bound by the provisions of this article and to comply will all the other state and federal laws applicable to the licensee's activities; and
 - e. Submit any other information reasonably required by the city to administer this article.
- (3) Upon proper application, a commercial solid waste operator's license will be issued in the name of the person or entity responsible for the operation of the motor vehicles used for commercial solid waste collection in the city. The license is valid for one year, unless earlier revoked.
- (4) The city clerk or his/her designee may revoke a commercial solid waste operator's license for any violation of this article giving the license prior written notice of the violation and an opportunity to respond in person as to why the license should not be revoked.

(b) *License fee.*

- (1) Each person or entity granted a license under this article must pay a license fee equal to four percent of the operator's gross revenues from the collection, hauling, or transporting of commercial or industrial solid waste collection within the city, after excluding there from the revenues licensee received from the collection, hauling, or transporting of recycled solid waste collection within the city.
- (2) Each licensee must pay the required license fee quarterly to the city within 45 days following each September 30, December 31, March 31, and June 30. Each quarterly payment must be computed on the revenues for the quarter preceding that in which payment is due. Each licensee must provide with each quarterly payment a statement of the gross revenues upon

which the payment is computed, prepared according to generally accepted accounting practices, and signed by an authorized representative of the licensee. The licensee must pay a late fee of 12 percent per annum, compounded daily, on any quarterly payment, or portions thereof, that is paid subsequent to the required payment date.

- (3) Each quarterly payment must be accompanied by a listing of the location and number of commercial containers serviced by the licensee by the licensee in the city.
 - (4) The city may inspect and audit the licensee's records upon which payments to the city are computed and paid. If the city's inspection or audit shows that the licensee has underpaid an amount required to be paid under this article, licensee must pay the deficiency within 60 days of the date the city gives licensee written notice of the deficiency. If the deficiency is more than ten percent of the amount the licensee was required to pay for the quarter, the licensee must also pay a penalty of ten percent per annum of the deficiency and the city's reasonable cost incurred for the inspection or audit.
 - (5) The city's acceptance of a payment is not deemed to be a release or an accord and satisfaction of any claim the city may have for further and additional sums made payable under this article. The city is not liable to refund to the licensee any payment licensee makes to the city that is more than amount required to be paid by the licensee under this article.
- (c) *License regulations.*
- (1) All licensees must identify each vehicle the licensee operates within the city by placing clearly legible letters identifying the name of the person or business responsible for the operation of the motor vehicle.
 - (2) A licensee must notify the city of any change in the information submitted in an application for a license, including a change in the name, address or telephone number of the licensee. The notification must be given to the city in writing within ten days of the change.
 - (3) It is unlawful for any person to operate or use a motor vehicle to unload or empty a solid waste container by means of a mechanical lifting apparatus or device attached to the motor vehicle between the hours of 10:00 p.m. and 7:00 a.m. of the following day, if the container is located within 400 feet of a residential property.
 - (4) All garbage must be transported in leak proof containers or in leak proof vehicle bodies or compartments and must be so fitted and constructed so that the garbage is kept covered at all times except when being loaded and emptied.
- (d) *Suspension or revocation of license.*
- (1) The city may suspend or revoke a license under this article for a violation of this article in accordance with the uniform permit procedures of this Code.
 - (2) A fine of \$500.00 may be imposed on any person or entity that unlawfully operates or uses a motor vehicle to unload or empty a solid waste container by means of a mechanical lifting apparatus or device attached to the motor vehicle between the hours of 10:00 p.m. and 7:00 a.m. of the following day, if the container is located within 400 feet of a residential property.

(Ord. No. [2013-65](#), 4-16-13; Ord. No. [2017-57](#), 6-6-17)

Editor's note— Ord. No. 2013-65, adopted April 16, 2013, was codified herein as § 7.5-18 at the discretion of the editor.

DIVISION 2. - JUNKED AND ABANDONED MOTOR VEHICLES³

Footnotes:

--- (3) ---

Editor's note— Ord. No. 4-0794, §§ 1—10, adopted July 5, 1994, superseded former §§ 9-51 and 9-52 which pertained to junked and abandoned motor vehicles. The provisions of said ordinance have been included herein as a new div. 2, §§ 9-51—9-61. See the Code Comparative Table.

Cross reference— Traffic and motor vehicles, ch. 17.

Sec. 9-51. - Junked, abandoned or non-operational motor vehicles—Exterior storage.

(a) *Generally.* No person in charge of or in control of premises, whether as owner, lessee, tenant, occupant, or otherwise shall allow any partially dismantled, wrecked, junked, discarded or otherwise non-operable motor vehicle to remain on such property longer than 20 days.

(b) *Exceptions:*

(1) This section shall not apply with regard to any vehicle in an enclosed building or so located upon the premises as not to be readily visible from any public place or from any surrounding private property.

(2) This section shall not apply with regard to any vehicle on the premises of a business enterprise operated in a lawful place, other than in a residential district, and operated in a lawful manner, when the keeping or maintenance of such vehicle is necessary and reasonable to the operation of such business enterprise.

(3) This section shall not apply with regard to a vehicle in an appropriate storage place or depository maintained in a lawful place and manner by the city or any other public agency or entity.

(c) *Enforcement.* This section may be enforced either by a police officer of the city or by the building inspector or other person designated by the mayor and council.

(d) *Definitions.* The following definitions shall apply:

Abandoned is defined as being parked or left on premises (not your own or not in front or near your legal residence) or that which is parked in front or on another's property.

Non-operable is defined as being unable to be legally operated on public street (to include a current license tag and/or decal).

(Ord. No. 4-0794, § 1, 7-5-94)

Sec. 9-52. - Same—Storing of abandoned vehicles on public streets.

(a) No person shall be permitted to store or engage in the storage of any vehicle, whether motorized or propelled by another vehicle, of any type, upon the public streets, alleys or rights-of-way within the city for a period not in excess of 72 hours. After the initial 72-hour period, the vehicle shall be cited for illegal parking by a police officer of the city. For such offense, there shall be imposed, upon conviction, a \$50.00 fine assessed against the (1) owner of record, (2) and/or the current owner, (3) or the last person operating the vehicle if he/she can be identified.

(b) The police officer may have the vehicle towed immediately, if in his/her opinion, the vehicle represents an immediate traffic hazard.

- (c) After a period of 72 hours from the date upon which the vehicle is cited by the police department, the police department shall have the right to order the vehicle towed by a private wrecker service and disposed of pursuant to the provisions of state law.
- (d) The terms "store" or "storage" are defined as the vehicle being parked or remaining unmoved in or from the same location for a period in excess of 72 hours.

(Ord. No. 4-0794, § 1, 7-5-94)

Sec. 9-53. - Motor homes, recreational vehicles, travel trailers, boats, or other similar vehicles with two or more axles.

- (a) No person owning, leasing, occupying, possessing and/or having charge of any premises or business within the city shall park, keep or maintain any motor home, recreational vehicle, travel trailer, boat, or any similar type vehicle upon the streets, alleys or rights-of-way within the city.
- (b) Any motor vehicle having more than two axles, including the front axle shall not operate and shall be prohibited from operating in any area which is primarily residential or any area in the city zoned as follows: R-1, R-2. The term "operate" shall include but not be limited to the parking, driving, repairing or otherwise operating of said motor vehicle in said prohibited areas.
- (c) This division shall not prohibit the parking of a legally operable motor vehicle on the street or right-of-way in front of a residence when adequate parking is not available on private property unless:
 - (1) It has been designated and posted as a "No Parking" area.
 - (2) It is on a major thoroughfare and is considered as a traffic hazard by the chief of police or his representative.
 - (3) It is deemed by the chief of police or his representative to impede the proper flow of traffic.
 - (4) It has more than two axles and is in an area zoned R-1 or R-2.

(Ord. No. 4-0794, § 2, 7-5-94)

Sec. 9-54. - Semitrailers.

No semitrailer truck or any part thereof shall be parked upon the public ways of the city, other than for the expeditious loading, delivery, pickup and/or loading of materials.

(Ord. No. 4-0794, § 3, 7-5-94)

Sec. 9-55. - Authority over traffic control devices and authority to post signs.

- (a) The chief of police shall cause to be erected and maintained all official signs, signals or devices to regulate traffic in any street or avenue in the city as he shall see fit in accordance with the exercise of reasonable police power.
- (b) No operator or owner of any motor vehicle, as defined by the Highway Code of the State of Alabama, shall drive, or allow to be driven, any such motor vehicle on any street in a manner contrary to any regulatory sign, signal or device placed by order of the chief of police.
- (c) The chief of police or any other person so designated by the mayor and city council shall post or cause to be posted suitable signs indicating a restricted or prohibited parking zone.

(Ord. No. 4-0794, § 4, 7-5-94)

Sec. 9-56. - No parking zone.

No person shall park a motor vehicle in any designated area when such area is properly marked with yellow paint and/or with an appropriate sign.

(Ord. No. 4-0794, § 5, 7-5-94)

Sec. 9-57. - Emergency vehicles.

The provisions of this division shall not apply to police, fire or other emergency vehicles while in the active discharge of their duties.

(Ord. No. 4-0794, § 6, 7-5-94)

Sec. 9-58. - Owner presumed operator.

The presence of an unattended, junked, abandoned or non-operable motor vehicle on the premises of one who is not the owner or in control of such vehicle or in a restricted or prohibited parking area shall raise a prima facie presumption of evidence that the registered owner of the automobile or other motor vehicle parked or left or caused to be parked or left the automobile or other motor vehicle on such premises, and the burden of proof shall be upon the registered owner to show otherwise.

(Ord. No. 4-0794, § 7, 7-5-94)

Sec. 9-59. - Authority to cite or tow.

Any police officer of the city is hereby authorized to place a traffic citation on a motor vehicle for parking in a designated restricted zone. Any police officer of the city is authorized to remove or cause to be removed to the nearest garage or other place of safety any motor vehicle found parked in a restricted or prohibited zone when such vehicle has been left unattended for a period of 72 hours or is determined by the police officer that such motor vehicle constitutes a hazard to traffic or to the general public of the city by being parked in the restricted parking zone.

(Ord. No. 4-0794, § 8, 7-5-94)

Sec. 9-60. - Punishment.

Except as stated above in section 9-52, the court upon conviction of any part of this division may impose a fine not to exceed \$500.00 and/or impose a jail sentence not to exceed six months. Further, that upon the conviction of the above division, the court may in its discretion impose as an additional fine or cost any expense of towing, storage or disposition of any vehicle involved in the above division by the city.

(Ord. No. 4-0794, § 9, 7-5-94)

Secs. 9-61—9-70. - Reserved.

**STORMWATER MANAGEMENT
POST-CONSTRUCTION
ORDINANCE**

RECITALS

WHEREAS, the City of Irondale operates under the requirements of the Alabama Department of Environmental Management (ADEM) National Pollutant Discharge Elimination System (NPDES) Permit; and

WHEREAS, this permit authorizes stormwater discharges from regulated small municipal separate storm sewer systems (MS4); and

WHEREAS, the City of Irondale must be compliant with the ADEM NPDES Permit by developing, implementing, and enforcing a program to address post-construction stormwater management; and

WHEREAS, the City of Irondale finds it necessary to enact an ordinance to address and enforce post-construction stormwater management standards on Qualifying Sites to prevent or minimize water quality impacts and ensure that the volume and velocity of pre-construction stormwater runoff is not significantly exceeded for the life of the property's use to the maximum extent practical (MEP).

NOW, THEREFORE BE IT ORDAINED by the City Council of the City of Irondale, Alabama, as follows:

Section 1 DEFINITIONS

For the purposes of this ordinance, the following words and terms shall have the meaning assigned to them in this section.

Best Management Practices - (herein abbreviated as "BMP") - activities, prohibitions of practices, maintenance procedures and management practices designed to prevent or reduce the pollution of waters to the MS4. Best Management Practices also include treatment requirements, operating procedures, and practices to control facility site runoff, spillage or leaks, sludge or waste disposal or drainage from raw material storage and construction sites.

Non-structural BMPs - Non-structural BMPs may include but not be limited to the following: preservation of open spaces and vegetation, the establishment of conservation easements, the establishment of buffers along streams and other waters, maintenance of vegetation, BMP inspection and maintenance, planning for future development or redevelopment.

Qualifying Site - Qualifying Site is any new development site or re-development site that results in a total land disturbance of one or more acres and sites that disturb less than one acre but are a part of a larger common development or sale that would disturb one or more acres.

Structural BMPs - Structural BMPs may include, but not be limited to the following: detention/ retention devices, check dams, drainage swales, lined ditches, infiltration basins, porous pavement, outlet protection, velocity dissipation devices, slope protection, constructed wetlands, rain gardens, catch basin inserts, vegetated filter strips, and rain barrels.

Section 2 ADMINISTRATION

The municipal engineer for the City, the municipal official or employee who is a qualified credentialed professional, such other municipal official or municipal employee who has had sufficient experience dealing with BMP design to enable them to enforce the provisions of this ordinance, an individual or agency contracted to provide such service, shall be responsible, on behalf of the City, to enforce the provisions of this ordinance.

Section 3 POST-CONSTRUCTION BMP DESIGN

Section 3.1 Design Standards.

The post-construction BMPs for qualifying sites, which may include a combination of structural BMPs and/or non-structural BMPs, must be designed to ensure that the volume and velocity of pre-construction stormwater runoff, to the maximum extent

practicable, is not significantly exceeded.

The current Post Construction Stormwater Management Technical Memorandum (Addendum A) details acceptable design criteria meeting the requirement of the current NPDES Permit No. _____ and shall be the basis for the design and implementation of post-construction BMPs.

Section 3.2 Design References.

By reference in this Section, the City adopts the following as design references to meet the design standards:

- a) The latest version of the "Alabama Handbook for Erosion Control, Sedimentation Control and Stormwater Management on Construction Sites and Urban Areas," Volumes 1 and 2.
- b) The latest version of the "Low Impact Development Handbook for the State of Alabama."
- c) Any stormwater design manual approved by the city that meets the design requirement of this ordinance.

Section 4 APPLICATION REQUIREMENTS

As part of the Land Disturbance Application, all Qualifying Sites shall include the following components:

Section 4.1 Post-Construction BMP Design Description.

Procedures and strategies of the structural BMPs and/or non-structural BMPs that meet the design standards for Qualifying Sites found in Section 3.1 of this ordinance. Submittal to the City of a certified as-built of the BMPs and a letter of substantial compliance from the design engineer is required within 120 days of construction completion.

Section 4.2 Post-Construction BMP Inspection Plan Description.

Procedures and strategies that will address inspections of the BMPs to confirm proper function require corrective actions to poorly functioning or inadequately maintained BMPs, and require record keeping of maintenance activities, inspections, and corrective actions. The City shall perform or require the performance of an inspection by the developer/ owner/ operator at least once per year. Records of these inspections shall be made available to ADEM upon request and copies shall be provided to the City on an annual basis. The minimum documentation requirements for inspections are as follows:

- a) Facility type

- b) Inspection date
- c) Name and signature of the inspector
- d) Site location
- e) Owner information (name, address, phone number, fax, and email)
- f) Description of the stormwater BMP condition that may include the quality of: vegetation and soils, inlet and outlet channels and structures, embankments, slopes, and safety benches; spillways, weirs, and other control structures; and sediment and debris accumulation in storage and forebay areas as well as in and around inlet and outlet structures;
- g) Photographic documentation of all critical stormwater BMP components;
- h) Specific maintenance items or violations that need to be corrected by the owner/operator of the stormwater control or BMP; and
- i) Maintenance agreements for long-term BMP operations and maintenance.

Section 4.3 Post-Construction BMP Operation and Maintenance Plan Description.

Procedures and strategies that will address adequate long-term operation and maintenance of the BMPs. One or more of the following shall be applicable (as determined by the City) to establish the responsible party for long-term operation and maintenance. The document(s) shall be provided to the City for review. Upon approval, an executed copy shall be put on file in the _____ Department:

- a) The developer's signed statement accepting responsibility for maintenance until the maintenance responsibility is legally transferred to another part.
- b) Written conditions in the sales or lease agreement that require the recipient to assume responsibility for maintenance.
- c) Written conditions in project conditions, covenants, and restrictions for residential properties assigning maintenance responsibilities to a home owner's association or another appropriate group for maintenance of structural and treatment control management practices.
- d) Any other legally enforceable agreement that assigns permanent responsibility for maintenance.

Section 5
ENFORCEMENT AND ABATEMENT

If a responsible party fails or refuses to meet the design, operation, or maintenance standards required by this ordinance, the City, after reasonable notice, may correct a violation of the design standards, operation, or maintenance needs by performing all necessary work to place the measures in proper working condition. If the BMPs become a danger to public safety or public health, the City shall notify in writing the responsible party for changes to design, operation, maintenance, and repairs of the BMP. Upon receipt of that notice, the responsible party shall have 14 calendar days or such additional time as the City shall determine to be reasonably necessary to complete the action, to make changes to design, operation, maintenance, and repairs of the measures in an approved manner. If corrective action is not undertaken within that time, the City may take necessary corrective action. The cost of any action by the City under this Section shall be billed to the responsible party. If the responsible party refuses to pay the bill, the City is entitled to bring an action against the responsible party to pay, file a lien against the property, or both. Costs shall include interest, collection fees, and reasonable attorney fees.

Section 6
MISCELLANEOUS

Section 6.1 Notices.

Whenever the City is required or permitted to:

- (a) give notice to any party; such notice must be in writing; or
- (b) deliver a document to any party; such notice or document may be delivered by personal delivery, certified mail (return receipt requested), registered mail (return receipt requested) or a generally recognized overnight carrier, to the address of such party which is in the records of the City or is otherwise known to the City.

Section 6.2 References.

Whenever a Section is referred to in this ordinance, unless the context clearly indicates the contrary, such reference shall be to a section of this ordinance.

Section 6.3 Severability.

The provisions of this ordinance are severable. If any part of this ordinance is determined by a court of law to be invalid, unenforceable or unconstitutional, such determination shall not affect any other part of this ordinance.

Section 6.4 Captions.

The captions of Sections and sections are for reference only, and such captions shall not affect the meaning of any provision of this ordinance.

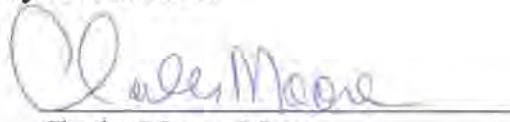

Section 6.5 Ultimate Responsibility.

The standards set forth herein and promulgated under this ordinance are minimum standards; therefore, this ordinance does not intend nor imply that compliance by any person will ensure that there will be no contamination, pollution, nor unauthorized discharge of pollutants.

Section 6.6 Effective Date.

This ordinance shall be published as required by law and shall become effective June 7, 2018.

ADOPTED & APPROVED this the 7th day of June 2018.

Charles Moore, Mayor

CERTIFICATION

I, James D. Stewart Jr., City Clerk of the City of Irondale, Alabama, hereby certifies the above to be a true and correct copy of a resolution adopted by the City Council of the City of Irondale at its regular meeting held on June 7, 2018, as same appears in the minutes of record of said meeting.

ATTEST:

James D. Stewart Jr., City Clerk

ADDENDUM A

Overview

In 1990, the U.S. Environmental Protection Agency (EPA) promulgated regulations establishing Phase I of the National Pollutant Discharge Elimination Systems (NPDES) stormwater program. The Phase I program for municipal separate storm sewer systems (MS4s) require operators of “medium” and “large” MS4s that generally serve populations of 100,000 or higher to implement a stormwater management program as a means to control to the maximum extent practicable (MEP) polluted discharges from certain municipal, industrial and construction activities into the MS4.

The Alabama Department of Environmental Management (ADEM) presently has primary jurisdiction over permitting and enforcement of the Stormwater Program for Alabama. The City of _____ (City) was issued NPDES Permit Number ALS0000__ on **DATE**. This NPDES Permit became effective on **DATE** and will expire on **DATE**. The City is required to develop and implement a Stormwater Management Program (SWMP) in accordance with the NPDES Permit requirements.

In accordance with the NPDES Permit, the City is required to develop and implement a Post Construction Stormwater Program to address stormwater runoff from qualifying new development and re-development projects by **DATE**. This memorandum provides technical guidance regarding the City’s updated post-construction stormwater management requirements in accordance with the City’s NPDES Permit.

Applicable Developments

The City’s updated post-construction stormwater management requirements are only applicable to “Qualifying New Development or Redevelopment” projects as defined below:

“Qualifying New Development and Redevelopment” means any site that results from the disturbance of one acre or more of land or the disturbance of less than one acre of land if part of a larger common plan of development or sale that is greater than one acre. Qualifying new development and redevelopment does not include land disturbances conducted by entities under the jurisdiction and supervision of the Alabama Public Service Commission.

Since stormwater detention and retention facilities are the primary Best Management Practices (BMPs) that have historically been used for post-construction stormwater management, this technical memorandum has been developed to address stormwater detention and retention facilities. However, this does not preclude the use of other generally accepted engineering practices.

Implementation

Effective **DATE**, all qualifying new development, and redevelopment projects shall be designed in accordance with this technical memorandum.

Waiver Request

The City recognizes that there are existing project sites that have been constructed or previously approved, before the effective **DATE** of this technical memorandum, that may qualify for a waiver from the updated post-construction stormwater management requirements. As a result, the City has developed an Existing Development, Post Construction Stormwater Management Waiver Request Form (Figure 1) to address existing project sites. In order for an existing project site to be considered for a waiver, the waiver request form shall be completed and submitted to the City for review and approval. If a waiver has been submitted for a development that has not been completed and the density of the development is increased and/or modified, the developer shall resubmit a waiver request for this development.

Water Quality Requirements

Post-construction stormwater runoff quality is an important component of the City's SWMP. In order to meet the requirements of the City's NPDES Permit, a Water Quality Volume (WQv) must be accounted for on each project site, and BMPs must be utilized to store and treat the WQv. The required WQv is based upon the first 1.1 inches of rainfall that occurs on the project site. The WQv can be estimated as described below.

WQv = 1.1 inches / acre of additional impervious area.

For example, an existing 12.5-acre site planned for re-development contains 3 acres of existing impervious area. The proposed development will contain seven total acres of impervious area in the post-development condition. The required WQv shall be calculated as follows:

$$\begin{aligned} \text{WQv} &= 1.1 \text{ inches} * 4 \text{ acres of additional impervious area} \\ &= 1.1 \text{ inches} * (1 \text{ foot} / 12 \text{ inches}) * 4 \text{ acres} * (43,560 \text{ sq. ft.} / 1 \text{ acre}) \\ &= 15,972 \text{ cubic feet of storage required} \end{aligned}$$

The WQv that is required for each project site may be provided in multiple ways to allow greater flexibility during design. There are a number of post-construction BMPs such as detention ponds, retention ponds, bioretention swales, proprietary stormwater quality treatment devices, sand filters, etc. that may be utilized by the Owner and their Engineer-of-Record to meet the water quality requirements.

Low Impact Development (LID)

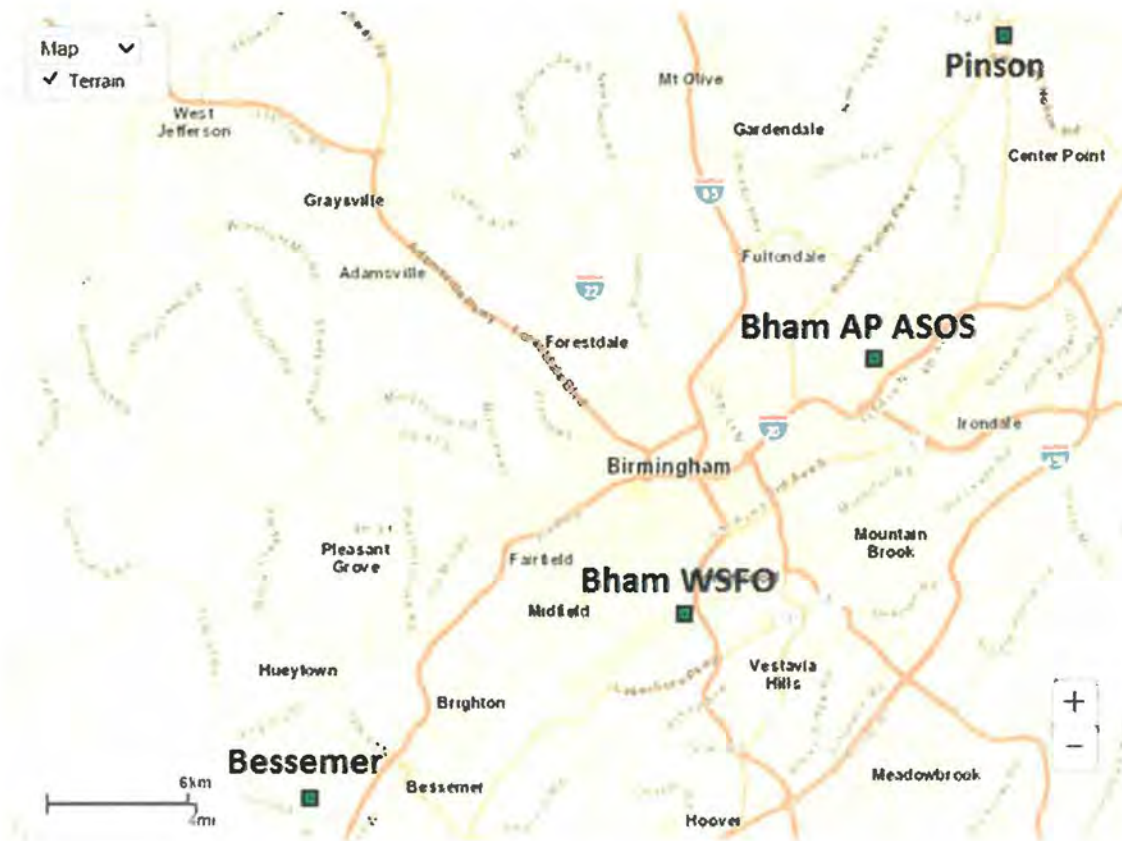

As an option for meeting the updated post-construction stormwater management requirements, the City encourages Owners and Developers to incorporate the use of low impact development (LID) practices into qualifying development and redevelopment projects. The latest version of the Alabama Low Impact Development is incorporated into this technical memorandum by reference.

Design Standards

For detention and retention ponds, the calculation methodology shall utilize the National Resource Conservation Resources (NRCS) Urban Hydrology for Small Watersheds Technical Release 55 (TR-55) or equivalent. For the determination of pre-construction and post-construction stormwater runoff hydrology, the 24-hour rainfall depths from National Oceanic and Atmospheric Administration (NOAA) Atlas14, Volume 9, Version 2 included in Table 1 shall be used:

Table 1. Design Storms

Storm Event (24 hour)	Rainfall (inches) (Bessemer)	Rainfall (inches) (Bham WSFO)	Rainfall (inches) (Bham AP ASOS)	Rainfall (inches) (Pinson)
2-year	4.09	4.1	4.12	4.11
5-year	4.97	4.99	5.02	4.99
10-Year	5.82	5.83	5.85	5.8
25-Year	7.18	7.15	7.13	7.02
100-Year	9.71	9.56	9.39	9.15

As a part of the City's requirements for post-construction stormwater runoff management, all project sites shall be responsible for ensuring, to the MEP, that post-development runoff mimics pre-development hydrology for the 2-year, 5-year, 10- year, and 25-year rainfall depths listed in Table 1. All stormwater detention or retention facilities must be able to convey the peak flow rate associated with a 100- year, 24-hour storm event. The Owner and/or Developer shall ensure, to the MEP, that installation of post-construction BMPs shall not adversely impact and/or cause flooding of properties located upstream and downstream of post-construction BMPs.

Detention and Retention Ponds

As a part of this technical memorandum, two structural BMPs (detention and retention ponds) have been highlighted as design options to assist in meeting the post-construction stormwater management requirements of the City's NPDES permit. Both detention ponds and retention ponds are fairly simple to design, construct and maintain. However, other structural BMPs may be selected by the Owner and Engineer-of-Record for review and approval by the City and are welcomed to be incorporated into the overall stormwater management plan for each project site.

A Design Form, Detention / Retention Ponds (Figure 2) has been developed by the City to aid in the design, review, and approval of detention and retention facilities. The design form provides a standard format for the Engineer-of-Record to provide information concerning pre-development conditions, post-development conditions, pond outlet configurations, pond storage, and pond peak flow discharges. For a project that contains multiple detention facilities, the Engineer-of-Record may simply provide a Design Form for each facility. While a detention pond can be utilized to meet the stormwater management requirements, some type of filtration system is needed for a detention pond to meet the stormwater quality requirements. The filtration system must allow the volume of water associated with the WQv to drain slowly out of the pond, but should drain within a forty-eight (48) hour period. Figure 3 provides some basic examples of filtering systems that may be applicable to detention ponds.

As-Built Certification

As a part of the NPDES permit, the City must insure the BMPs that have been designed and approved are constructed and operated in accordance with their original design and intent. In an effort to confirm that the constructed BMPs meet the designer's intent, an As-Built Evaluation and Certification form (Figure 4) has been developed. It shall be the Owner's responsibility to have as-built information, such as pond volume, embankment size, and elevations, invert size and elevations, and spillway elevations, field surveyed by a Professional Land Surveyor. It shall be the engineer of record's responsibility to utilize the field surveyed information to fill out the As-Built Evaluation

and Certification Form. The Owner has two options for completing the As-Built Evaluation and Certification:

Option 1 The As-Built Evaluation and Certification form shall be submitted and approved by the City before the issuance of a Certificate of Occupancy (CO) and/or before the recording of the final subdivision plat.

Option 2 If the Owner would like to obtain a CO and/or record the final subdivision plat prior to the City's approval of the As-Built Evaluation and Certification form, the Owner may post a bond or other forms of surety acceptable to the City in the amount of 100% of the construction cost associated with post-construction stormwater management BMPs and the cost associated with the effort required to complete the As-Built Evaluation and Certification. The As-Built Evaluation and Certification form shall be submitted to the City within 120 days of receipt of a CO and/or recording of the final subdivision plat.

Annual Inspections

In order for post-construction BMPs to continue to function in accordance with their original design and installation, annual inspections are required by the City's NPDES permit. The Owner of the project is required to have these annual inspections performed and must then submit the required Annual Inspection Form (Figure 5) to the City. The Annual Inspection Form shall provide documentation concerning the condition of each facility in terms of vegetative cover, erosion that may be occurring, the condition of inlets into the pond and the pond outlet, embankment conditions and any maintenance required and/or performed. The City shall evaluate the documentation submitted to confirm that the stormwater management facilities are continuing to function as designed.

The Annual Inspection Form shall be submitted to the City each year by 30 September.

Operation and Maintenance

It is the responsibility of the Owner to operate and maintain the stormwater management facility and/or BMPs in accordance with the original design intent and approval. If the original Owner or Developer has sold the project or passed ownership on to a Homeowner's Association, then it is the new Owner or HOA's responsibility to maintain the facility and provide any required inspection and maintenance.

Should maintenance be needed at a facility as a result of the Annual Inspection, the Owner shall provide the City documentation of the maintenance required and a schedule for completing all maintenance activities. Once all maintenance activities are completed, the Owner shall provide documentation to the City of the maintenance performed and that the BMP operates as it was designed.

A summary of maintenance activities shall be submitted to the City each year by 30 September. The summary shall cover the previous fiscal year beginning 1 October through 30 September.

Follow-up actions:

Follow-up actions required: yes No If Yes, please explain: _____

Professional Engineer Certification:

By affixing my professional seal and signature on this form, I hereby certify that this stormwater management facility provides the required water quality volume (WQ_v) and is being properly maintained in accordance with the technical memorandum listed in the City of Irondale's Post Construction Ordinance. In my professional opinion, the stormwater management facility is functioning as it was designed.

By affixing my professional seal and signature on this form, I hereby certify that this stormwater management facility requires the above described maintenance in order to provide the required water quality volume (WQ_v) and/or to function as it was designed.

STORM WATER MANAGEMENT ILLCIT DISCHARGE

RECITALS

WHEREAS, the purpose of this ordinance is to provide for the health, safety, and general welfare of the citizens of **IRONDALE** through the regulation of non-storm water discharges to the storm drainage system to the maximum extent practicable as required by federal and state law.

WHEREAS, this ordinance establishes methods for controlling the introduction of pollutants into the municipal separate storm sewer system (MS4) to comply with the requirements of the National Pollutant Discharge Elimination System (NPDES) permit process.

WHEREAS, this ordinance provides the minimum content for implementing and enforcing a STORMWATER management consistent with the Alabama Department of Environmental Management (ADEM) permit currently issued to the **IRONDALE**.

WHEREAS, the objectives of this ordinance are:

1. To regulate the contribution of pollutants to the municipal separate storm sewer system (MS4) by STORMWATER discharges by any user
2. To prohibit Illicit Connections and Discharges to the municipal separate storm sewer system
3. To establish legal authority to carry out all inspection, surveillance and monitoring procedures necessary to ensure compliance with this ordinance

NOW, THEREFORE BE IT ORDAINED by the City Council of the Irondale, Alabama, as follows:

Section 1 DEFINITIONS

For the purposes of this ordinance, the following words and terms shall have the meaning assigned to them in this section.

Authorized enforcement agency: employees or designees of the director of the municipal agency designated to enforce this ordinance.

Best Management Practices (BMPs): schedules of activities, prohibitions of practices, general good housekeeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices to prevent or reduce the discharge of pollutants directly or indirectly to STORMWATER, receiving waters, or STORM WATER conveyance systems. BMPs also include treatment practices, operating procedures, and practices to control site runoff, spillage or leaks, sludge or water disposal, or drainage from raw materials storage.

Clean Water Act. The Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), and any subsequent amendments thereto.

Construction Activity. Activities subject to NPDES Construction Permits. Currently, these include construction projects resulting in land disturbance of 1 acre or more. Such activities include but are not limited to clearing and grubbing, grading, excavating, and demolition.

Hazardous Materials. Any material, including any substance, waste, or combination thereof, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may cause, or significantly contribute to, a substantial present or potential hazard to human health, safety, property, or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.

Illegal Discharge. Any direct or indirect non-storm water discharge to the storm drain system, except as exempted in Section X of this ordinance.

Illicit Connections. An illicit connection is defined as either of the following:

1. Any drain or conveyance, whether on the surface or subsurface, which allows an illegal discharge to enter the storm drain system including but not limited to any conveyances which allow any non-storm water discharge including sewage, process wastewater, and wash water to enter the storm drain system and any connections to the storm drain system from indoor drains and sinks, regardless of whether said drain or connection had been previously allowed, permitted, or approved by the **IRONDALE** or,
2. Any drain or conveyance connected from commercial or industrial land use to the storm drain system which has not been documented in plans, maps, or equivalent records and approved by the **IRONDALE**.

Industrial Activity. Activities subject to NPDES Industrial Permits as defined in 40 CFR, Section 122.26 (b) (14).

National Pollutant Discharge Elimination System (NPDES) Storm Water Discharge Permit. Means a permit issued by EPA (or by a State under authority delegated under 33 USC § 1342(b)) that authorizes the discharge of pollutants to waters of the United States, whether the permit is applicable on an individual, group, or general area-wide basis.

Non-Storm Water Discharge. Any discharge to the storm drain system that is not composed entirely of stormwater.

Person. Any individual, association, organization, partnership, firm, corporation or other entity recognized by law and acting as either the owner or as the owner's agent.

Pollutant. Anything which causes or contributes to pollution. Pollutants may include, but are not limited to: paints, varnishes, and solvents; oil and other automotive fluids; non-hazardous liquid and solid wastes and yard wastes; refuse, rubbish, garbage, litter, or other discarded or abandoned objects, ordinances, and accumulations, so that same may cause or contribute to pollution; floatables; pesticides, herbicides, and fertilizers; hazardous substances and wastes; sewage, fecal coliform and pathogens; dissolved and particulate metals; animal wastes; wastes and residues that result from constructing a building or structure; and noxious or offensive matter of any kind.

Premises. Any building, lot, parcel of land, or a portion of land whether improved or unimproved including adjacent sidewalks and parking strips.

Storm Drainage System. Publicly-owned facilities by which stormwater is collected and/or conveyed, including but not limited to any roads with drainage systems, municipal streets, gutters, curbs, inlets, piped storm drains, pumping facilities, retention and detention basins, natural and human-made or altered drainage channels, reservoirs, and other drainage structures.

Storm Water. Any surface flow, runoff, and drainage consisting entirely of water from any form of natural precipitation, and resulting from such precipitation.

Storm Water Pollution Prevention Plan. A document which describes the Best Management Practices and activities to be implemented by a person or business to identify sources of pollution or contamination at a site and the actions to eliminate or reduce pollutant discharges to STORMWATER, STORMWATER Conveyance Systems, and/or Receiving Waters to the Maximum Extent Practicable.

Wastewater means any water or other liquid, other than uncontaminated storm water, discharged from a facility.

Section 2 ADMINISTRATION

The **IRONDALE** shall administer, implement, and enforce the provisions of this ordinance. Any powers granted or duties imposed upon the **IRONDALE** may be enforced by _____ or delegated in writing by an official of the **IRONDALE** to persons or entities acting in the beneficial interest of or in the employ of the agency.

Section 3 ILLICIT DISCHARGE PROHIBITIONS

Section 3.1 Prohibition of Illegal Discharges.

No person shall discharge or cause to be discharged into the municipal storm drain system or watercourses any materials, including but not limited to pollutants or waters containing any pollutants that cause or contribute to a violation of applicable water quality standards, other than stormwater.

Section 3.2 Illegal Discharges Exemptions.

The prohibition shall not apply to any non-storm water discharge permitted under an NPDES permit, waiver, or waste discharge order issued to the discharger and administered under the authority of the Federal Environmental Protection Agency, provided that the discharger is in full compliance with all requirements of the permit, waiver, or order and other applicable laws and regulations, and provided that written approval has been granted for any discharge to the storm drain system.

The following discharges are exempt from discharge prohibitions established by this ordinance provided that they have been determined not to be a substantial contributor of pollutants by the City or Alabama Department of Environmental Management (ADEM):

- a) Water line flushing
- b) Landscape irrigation or lawn watering (not consisting or treated, or untreated wastewater unless otherwise authorized)
- c) Diverted stream flows
- d) Uncontaminated ground water infiltration
- e) Uncontaminated pumped groundwater
- f) Discharges from potable water sources
- g) Foundation or footing drains (not including active groundwater dewatering systems)
- h) air conditioning condensation or drains
- i) Irrigation water (not consisting or treated, or untreated wastewater unless otherwise authorized)
- j) Rising groundwater
- k) Springs
- l) Water from crawl space pumps
- m) Lawn watering runoff
- n) Individual residential car washing, to include charitable carwashes
- o) Residential street wash water
- p) Discharges or flows from firefighting activities (including fire hydrant flushing)
- q) Flows from natural riparian habitat or wetlands
- r) Dechlorinated swimming pool discharges
- s) Dye testing is an allowable discharge but requires a verbal notification to the **IRONDALE** before the time of the test.

Section 3.3 Prohibition of Illicit Connections.

- a) The construction, use, maintenance or continued existence of illicit connections to the storm drain system is prohibited.
- b) This prohibition expressly includes, without limitation, illicit connections made in the past, regardless of whether the connection was permissible under law or practices applicable or prevailing at the time of connection.

- c) A person is considered to be in violation of this ordinance if the person connects a line conveying sewage to the MS4, or allows such a connection to continue.

**Section 4
SUSPENSION OF MS4 ACCESS**

Section 4.1 Suspension Due to Illicit Discharges in Emergency Situations.

The **IRONDALE** may, without prior notice, suspend MS4 discharge access to a person when such suspension is necessary to stop an actual or threatened discharge which presents or may present imminent and substantial danger to the environment, or the health or welfare of persons, or the MS4 or Waters of the United States. If the violator fails to comply with a suspension order issued in an emergency, the **IRONDALE** may take such steps as deemed necessary to prevent or minimize damage to the MS4 or Waters of the United States, or to minimize danger to persons.

Section 4.2 Suspension Due to the Detection of Illicit Discharge.

Any person discharging to the MS4 in violation of this ordinance may have their MS4 access terminated if such termination would abate or reduce an illicit discharge. The **IRONDALE** will notify a violator of the proposed termination of its MS4 access. The violator may petition the **IRONDALE** for a reconsideration and hearing.

A person commits an offense if the person reinstates MS4 access to premises terminated under this Section, without the prior approval of the **IRONDALE**.

**Section 5
INDUSTRIAL, COMMERCIAL OR CONSTRUCTION ACTIVITY
DISCHARGES**

Any person subject to an industrial, commercial or construction activity NPDES stormwater discharge permit shall comply with all provisions of such permit. Proof of compliance with a said permit may be required in a form acceptable to the **IRONDALE** before the allowing of discharges to the MS4.

**Section 6
MONITORING OF DISCHARGES**

Section 6.1 Applicability.

This section applies to all facilities that have stormwater discharges associated with industrial, commercial, and construction activity.

Section 6.2 Access to Facilities.

- a) The **IRONDALE** shall be permitted to enter and inspect facilities subject to regulation under this ordinance as often as may be necessary to determine compliance with this ordinance. If a discharger has security measures in force which require proper identification and clearance before entry into its premises, the discharger shall make the necessary arrangements to allow access to representatives of the **IRONDALE**.
- b) Facility operators shall allow the **IRONDALE** ready access to all parts of the premises for the purposes of inspection, sampling, examination, and copying of records that must be kept under the conditions of an NPDES permit to discharge stormwater, and the performance of any additional duties as defined by state and federal law.
- c) The **IRONDALE** shall have the right to set up on any permitted facility such devices as are necessary in the opinion of the **IRONDALE** to conduct monitoring and/or sampling of the facility's stormwater discharge.
- d) The **IRONDALE** has the right to require the discharger to install monitoring equipment as necessary. The facility's sampling and monitoring equipment shall be maintained at all times in a safe and proper operating condition by the discharger at its own expense. All devices used to measure **STORMWATER** flow, and quality shall be calibrated to ensure their accuracy.
- e) Any temporary or permanent obstruction to safe and easy access to the facility to be inspected and/or sampled shall be promptly removed by the operator at the written or oral request of the **IRONDALE** and shall not be replaced. The costs of clearing such access shall be borne by the operator.
- f) Unreasonable delays in allowing the **IRONDALE** access to a permitted facility is a violation of a stormwater discharge permit and of this ordinance. A person who is the operator of a facility with an NPDES permit to discharge stormwater associated with industrial activity commits an offense if the person denies the **IRONDALE** reasonable access to the permitted facility for the purpose of conducting any activity authorized or required by this ordinance.
- g) If the **IRONDALE** has been refused access to any part of the premises from which **STORMWATER** is discharged, and he/she is able to demonstrate probable cause to believe that there may be a violation of this ordinance, or that there is a need to inspect and/or sample as part of a routine inspection and sampling program designed to verify compliance with this ordinance or any order issued hereunder, or to protect the overall public health, safety, and welfare of the community, then the **IRONDALE** may seek issuance of a search warrant from any court of competent jurisdiction.

Section 7
**REQUIREMENT TO PREVENT, CONTROL, AND REDUCE STORMWATER
POLLUTANTS BY THE USE OF BEST MANAGEMENT PRACTICES**

IRONDALE will adopt requirements identifying Best Management Practices for any activity, operation, or facility which may cause or contribute to pollution or contamination of stormwater, the storm drain system, or waters of the U.S. The owner or operator of a commercial or industrial establishment shall provide, at their own expense, reasonable protection from accidental discharge of prohibited materials or other wastes into the municipal storm drain system or watercourses through the use of these structural and non-structural BMPs. Further, any person responsible for a property or premise, which is, or may be, the source of an illicit discharge, may be required to implement, at said person's expense, additional structural and non-structural BMPs to prevent the further discharge of pollutants to the municipal separate storm sewer system. Compliance with all terms and conditions of a valid NPDES permit authorizing the discharge of stormwater associated with industrial activity, to the extent practicable, shall be deemed compliance with the provisions of this section. These BMPs shall be part of a STORMWATER pollution prevention plan (SWPP) as necessary for compliance with the requirements of the NPDES permit.

Section 8
WATERCOURSE PROTECTION

Every person owning property through which a watercourse passes, or such person's lessee, shall keep and maintain that part of the watercourse within the property free of trash, debris, excessive vegetation, and other obstacles that would pollute, contaminate, or significantly retard the flow of water through the watercourse. Also, the owner or lessee shall maintain existing privately-owned structures within or adjacent to a watercourse, so that such structures will not become a hazard to the use, function, or physical integrity of the watercourse.

Section 9
NOTIFICATION OF SPILLS

Notwithstanding other requirements of law, as soon as any person responsible for a facility or operation, or responsible for emergency response for a facility or operation has information of any known or suspected release of materials which are resulting or may result in illegal discharges or pollutants discharging into storm water, the storm drain system or water of the U.S. said person should take all necessary steps to ensure the discovery, containment, and cleanup of such release. In the event of such a release of hazardous materials said person shall immediately notify emergency response agencies of the occurrence via emergency dispatch services. In the event of a release of non-hazardous materials, said person shall notify the **IRONDALE** in person or by phone or facsimile no later than the next business day. Notifications in person or by phone shall be confirmed by written notice addressed and mailed to the **IRONDALE** within three business days of the phone notice. If the discharge of prohibited materials emanates from a commercial or industrial establishment, the owner or operator of such establishment shall also retain an on-site written record of the discharge and the actions taken to prevent its recurrence. Such

records shall be retained for at least three years.

Section 10 ENFORCEMENT AND ABATEMENT

Whenever the **IRONDALE** finds that a person has violated a prohibition or failed to meet a requirement of this Ordinance, the **IRONDALE** may enforce the ordinance with escalating procedures.

Section 10.1 Notification; Enforcement Remedies.

- (a) Warning Notice: A warning notice of violation is the lowest level of formal response to a violation. It is a verbal or written response presented to the violator shortly after a violation has been identified and is intended for minor violations that would not cause significant harm to the environment.

- (b) Notification of Violation: Whenever the Official finds that any person is in violation of any provision of this ordinance, or any order issued hereunder, the Official or his agent may serve upon such person written notice of the violation requiring the removal of illicit discharges and immediate cessation improper disposal practices within ten (10) calendar days of the date of such notice. Compliance by written notice of violation to the responsible person may require without limitation:
 - 1. The performance of monitoring, analyses, and reporting;
 - 2. The abatement or remediation of stormwater pollution or contamination hazards and the restoration of any affected property; and
 - 3. Payment of a fine to cover administrative and remediation costs; and
 - 4. The implementation of source control or treatment BMPs.

- (c) Compliance Order: Whenever abatement of a violation and/or restoration of the affected property is not possible within ten (10) days, a compliance order may be issued to the violator. The order shall set forth a deadline within which such remediation or restoration must be completed. Said order shall further advise that, should the violator fail to remediate or restore within the established deadline, the work will be done by a designated governmental agency or a contractor, and the expense thereof shall be charged to the violator.

Section 10.2 Appeal of Violation.

Any person receiving a Notice of Violation or Compliance Order may appeal the determination of the **IRONDALE**. The notice of appeal must be received within ten (10) days from the date of the Notice of Violation/Compliance Order. Hearing on the appeal before the appropriate authority or his/her designee shall take place within fifteen (15) days from the date of receipt of the notice of appeal. The decision of the municipal authority or

their designee shall be final.

Section 10.3 Enforcement Measures After Appeal.

If the violation has not been corrected pursuant to the requirements set forth in the Notice of Violation, or, in the event of an appeal, within **thirty (30) days** of the decision of the municipal authority upholding the decision of the **IRONDALE**, then representatives of the **IRONDALE** shall enter upon the subject private property and are authorized to take any and all measures necessary to abate the violation and/or restore the property. It shall be unlawful for any person, owner, agent or person in possession of any premises to refuse to allow the government agency or designated contractor to enter upon the premises for the purposes set forth above.

Section 10.4 Cost of Abatement of the Violation.

Within _____ days after abatement of the violation, the owner of the property will be notified of the cost of abatement, including administrative costs. The property owner may file a written protest objecting to the amount of the assessment within _____ days. If the amount due is not paid within a timely manner as determined by the decision of the municipal authority or by the expiration of the time in which to file an appeal, the charges shall become a special assessment against the property and shall constitute a lien on the property for the amount of the assessment.

Any person violating any of the provisions of this ordinance shall become liable to the city by reason of such violation. The liability shall be paid in not more than 12 equal payments. Interest at the rate of twelve (12) percent per annum shall be assessed on the balance beginning on the 1st day following the discovery of the violation.

Section 10.5 Injunctive Relief.

It shall be unlawful for any person to violate any provision or fail to comply with any of the requirements of this Ordinance. If a person has violated or continues to violate the provisions of this ordinance, the **IRONDALE** may petition for a preliminary or permanent injunction restraining the person from activities which would create further violations or compelling the person to perform abatement or remediation of the violation.

Section 10.6 Compensatory Action.

In lieu of enforcement proceedings, penalties, and remedies authorized by this Ordinance, the **IRONDALE** may impose upon a violator alternative compensatory actions, such as storm drain stenciling, attendance at compliance workshops, creek cleanup, etc.

Section 10.7 Violations Deemed a Public Nuisance.

In addition to the enforcement processes and penalties provided, any condition caused or permitted to exist in violation of any of the provisions of this Ordinance is a threat to public health, safety, and welfare, and is declared and deemed a nuisance, and may be summarily abated or restored at the violator's expense, and/or a civil action to abate, enjoin, or otherwise compel the cessation of such nuisance may be taken.

Section 10.8 Criminal Prosecution.

Any person that has violated or continues to violate this ordinance shall be liable to criminal prosecution to the fullest extent of the law, and shall be subject to a criminal penalty of \$500 dollars per violation per day and/or imprisonment for a period of time not to exceed one hundred and eighty (180) days.

The **IRONDALE** may recover all attorney's fees court costs and other expenses associated with the enforcement of this ordinance, including sampling and monitoring expenses.

Section 10.9 Remedies Not Exclusive.

The remedies listed in this ordinance are not exclusive of any other remedies available under any applicable federal, state or local law and it is within the discretion of the **IRONDALE** to seek cumulative remedies.

Section 11 MISCELLANEOUS

Section 11.1 Applicability.

This ordinance shall apply to all water entering the storm drain system generated on any developed and undeveloped lands unless explicitly exempted by an **IRONDALE**.

Section 11.2 Severability.

The provisions of this ordinance are hereby declared to be severable. If any provision, clause, sentence, or paragraph of this Ordinance or the application thereof to any person, establishment, or circumstances shall be held invalid, such invalidity shall not affect the other provisions or application of this Ordinance.

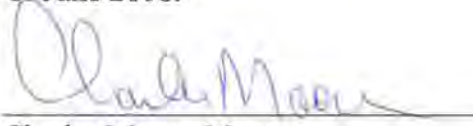

Section 11.3 Ultimate Responsibility.

The standards set forth herein and promulgated pursuant to this ordinance are minimum standards; therefore, this ordinance does not intend nor imply that compliance by any person will ensure that there will be no contamination, pollution, nor unauthorized discharge of pollutants.

Section 11.4 Effective Date.

This ordinance shall be published as required by law and shall become effective on June 7, 2018.

ADOPTED & APPROVED this the 7th day of June 2018.

Charles Moore, Mayor

CERTIFICATION

I, James D. Stewart Jr., City Clerk of the City of Irondale, Alabama, hereby certifies the above to be a true and correct copy of a resolution adopted by the City Council of the City of Irondale at its regular meeting held on June 7, 2018, as same appears in the minutes of record of said meeting.

ATTEST:

James D. Stewart Jr., City Clerk

2011

Guidelines and Standard
Operating Procedures

Chapter 1

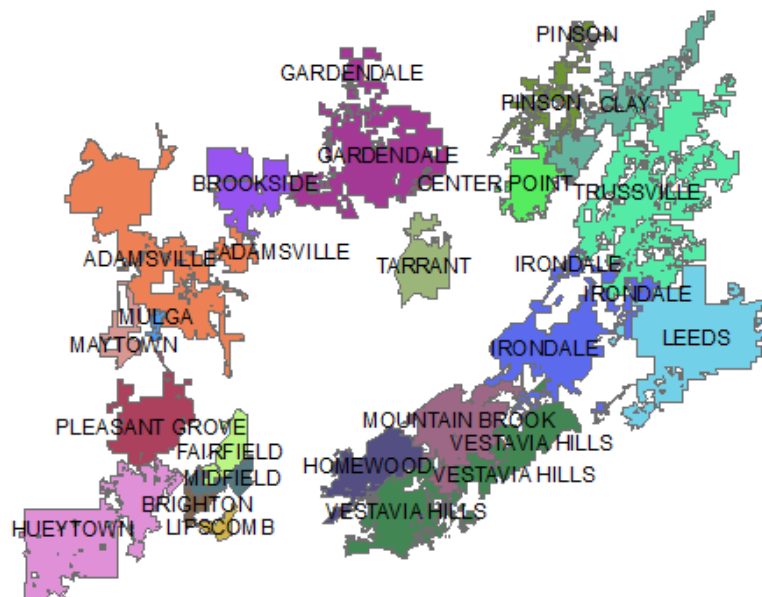

I. INTRODUCTION

The Introduction section describes the regulatory basis, overall organization, and intended audience of the Manual.

2.1 BASIS FOR THE MANUAL

In October 2001, The Alabama Department of Management (ADEM) in accordance with the Environmental Protection Agency (EPA) issued a National Pollutant Discharge Elimination System (NPDES) for stormwater discharges from Municipal Separate Storm Sewer Systems (MS4s). The 21 municipalities comprising the Storm Water Management Authority, Inc became subject to stormwater Phase I regulations based on their designation as high-density urbanized areas according to the 2000 US Census. See Figure 1-1 for a map of the regulated municipalities.

Figure 1-1: Storm Water Management Authority, Inc Municipalities

The regulation specifies that a new general permit be issued by ADEM on a revolving five year basis. The General permit is valid until the new permit is issued and requires each municipality to develop a five year plan to:

“(R)educe the discharge of pollutants from the MS4 to the maximum extent practicable; protect water quality, and satisfy the water quality requirements of the Clean Water Act and state water quality standards.”

The 21 municipalities decided to best meet the goals of the permit that a uniform organization, Storm Water Management Authority, Inc, Inc. (Storm Water), would need to be formed. In September 2009, the members of Storm Water contracted with the Jefferson County Department of Health to perform certain stormwater duties for each municipality. The municipalities incorporated into Storm Water before this Manual did not have written standardized procedures for carrying out municipal operations that pertain to the management of stormwater. This Manual is the creation of such a standardization that provides a commonly accepted framework, technical standards, and guidance on stormwater management measures that control the quantity and quality of stormwater produced from common municipal activities. This Manual will aid in helping a communities’ Illicit Discharge Detection and Elimination (IDDE) program and provide a basis for future employee training

This manual will not only provide assistance to municipalities to meet the Stormwater Phase I regulations, but encourages them to use targeted best management practices (BMPs) within the watershed with the long-term goal of consistent application by all regulated entities within the watershed. The Manual of Guidelines and Standard Operating Procedures will help promote improvement in the water quality of Jefferson County’s lakes, ponds, streams, and rivers.

2.2 OBJECTIVES OF THE MANUAL

The specific objectives of the Manual are to

- Provide a uniform set of technical standards and guidance on stormwater management measures that will control both the quantity and quality of stormwater produced by municipal activities, new development, redevelopment, and post-construction;
- Assist municipalities in meeting Stormwater Phase I requirements;

- Encourage the use of uniform BMP strategies with the long term goal of consistent application by all regulated entities within the watershed;
- Encourage municipal cost-savings through proper and timely maintenance of stormwater systems; and
- Promote behavior that will improve the water quality throughout Jefferson County

2.3 CONTENT OF THE MANUAL

The content of this Manual is based primarily on the select requirements of the Stormwater Phase I program. The five year plan for each community must address the following control measures:

1. Public Education and Outreach on Stormwater Impacts
2. Public Involvement and Participation
3. Illicit Discharge Detection and Elimination (IDDE)
4. Industrial Inspection Program
5. Construction Site Stormwater Runoff Control
6. Post-Construction Stormwater Management in New Development and Redevelopment
7. Pollution Prevention/Good Housekeeping for municipal operations
8. Promotion of Green Development
9. Roadway Procedures
10. Pesticide, Herbicide, and Fertilizer Application
11. Flood Control Projects
12. Spill Prevention and Response

This Manual addresses components for two of the minimum control measures, Illicit Discharge Detection and Elimination and Pollution Prevention/Good Housekeeping, as follows:

Illicit Discharge Detection and Elimination (IDDE) – This Manual describes the procedures that are used to develop the IDDE program for the MS4s in the 21 municipalities covered under the permit. The program is based on the specific needs of each municipality and the watershed it falls within. This Manual offers the outline of the steps used by JCDH to develop an overall IDDE program that is implemented by each municipality. The basic steps currently underway by JCDH are: 1) Location of priority areas likely to have illicit discharges 2) Mapping of all storm drain systems 3) implementing an illicit discharge detection program through dry screening and outfall monitoring 4) Developing uniform procedure to trace sources of illicit discharging 5) Developing

procedures to remove sources, and 6) Evaluating overall IDDE program effectiveness. This Manual provides information on each of the six steps currently being deployed by JCDH, and how they result in an effective IDDE program that fulfills the intent of the General Permit.

Pollution Prevention/Good Housekeeping for Municipal Operations –

This Manual provides the Program Manager and municipal staff with the resources and technical references to aid Jefferson County Department of Health and Storm Water Management Authority, Inc in implementing their own Pollution Prevention/Good Housekeeping program. The General Permit requires the following Pollution Prevention/Good Housekeeping components as part of the overall plan:

- a) *A program with a goal of preventing and/or reducing pollutant runoff from municipal operations. The program will include employee training through Jefferson County Department of Health in cooperation with the Storm Water Management Authority, Inc.*
- b) *Maintenance activities for the following: parks and open spaces (area such as public golf courses and athletic fields); fleet maintenance, building maintenance; new construction and land disturbance; roadway drainage system maintenance and storm sewer maintenance.*
- c) *Schedules and records for municipal maintenance activities in paragraph (b) above.*
- d) *Inspection procedures and schedules for long term structural controls.*

This approach allows for flexibility in communities that are in the Stormwater Management Authority to develop their own unique programs according to community needs and available resources.

2.4 MANUAL AUDIENCE AND ORGANIZATION

The Stormwater Phase I Program requires the development of new programs as well as training for municipal employees to implement the overall stormwater program during daily activities. For this reason the Manual addresses two distinct types of audiences (1) City Engineers; JCDH personnel; City Officials, and (2) municipal employees, such as public works personnel, who implement the programs on a day-to-day basis.

Chapter 1 will provide an introduction and overview of the Manual. Chapter 2, *Illicit Discharge Detection and Elimination*, presents procedures for City Engineers, JCDH personnel, and City Officials to use in identifying high priority areas, tracing illicit discharges, and

eliminating illicit discharges in a timely manner. Chapter 3, *Pollution Prevention and Good Housekeeping*, provides the general details on the many ways that municipal activities such as vehicle and facilities maintenance may adversely affect stormwater, and presents ways to modify municipal operations to better prevent and reduce stormwater pollution.

Chapter 3 also gives some details on how to develop procedures related to good housekeeping and pollution prevention.

The Appendices are intended for use by “in-the-field” municipal employees. Appendix A contains some guidelines and standard operating procedures (SOPs) employed by Storm Water Management Authority, Inc and JCDH for use in the detection and elimination of illicit discharges. Appendix B contains guidelines, SOPs, and forms to use in applying pollution prevention and good housekeeping techniques during regular work duties.

The guidelines will be divided into three categories to make them easier for all users. These categories are: Always, whenever possible, and Never. Facility Managers are encouraged to keep up with any changes that occur in specific regulatory compliances with any SOPs in this Manual and should contact Storm Water Management Authority, Inc accordingly. Specific training on the guidelines and SOPs will help to reinforce their importance and encourage implementation.

2.5 COMMON STORMWATER POLLUTANTS, SOURCES, AND IMPACTS

Stormwater runoff contains pollutants that can harm human health, degrade water quality and aquatic habitat, impair water recreational activities, and impair ecosystem functions. On its way into our local streams, rivers, and other receiving waterbodies, stormwater runoff accumulates pollutants such as oil, gas, and other hydrocarbons, heavy metals, deicers, pesticides, fine sediment, fertilizers and bacteria(pathogens), all of which cause impairment to water quality. Runoff from fertilized lawns, golf courses, right-of-ways, and city parks can contribute excess nutrients to waterbodies, which can lead to algal blooms and in extreme cases, fish kills events due to low dissolved oxygen levels. Elevated fecal coliform from sewage or other sources can impair water quality and can lead to restrictions on use and enjoyment of natural resources such as fishing and swimming areas. Other stormwater pollutants of concern are toxic contaminants, such as heavy metals, mercury, pesticides, which can come from vehicles, businesses, or from homeowner activities.

All of these pollutants can be dissolved in water and can wash into receiving bodies during storm events. Understanding the sources of these pollutants and the impacts each pollutant has can help identify the priority goals and objectives of your specific municipality. Table 1-1 summarizes common stormwater pollutants, their sources and potential impacts.

TABLE 1-1: COMMON STORMWATER POLLUTANTS, SOURCES AND IMPACTS		
Pollutant	Sources	Impact
Sediment	Construction sites; eroding stream banks and lakeshores; winter sand and salt application; vehicle/boat washing; agricultural sites.	Destruction of plant and fish habitat; transportation of attached oils, nutrients and other pollutants; increased maintenance costs, flooding.
Nutrients (phosphorus, nitrogen)	Fertilizers; malfunctioning septic systems; livestock, bird & pet waste; vehicle/boat washing; grey water; decaying grass and leaves; sewer overflows; leaking trash containers, leaking sewer lines.	Increased potential for nuisance or toxic algal blooms; increased potential for hypoxia/anoxia (low levels of dissolved oxygen which can kill aquatic organisms).
Hydrocarbons (petroleum compounds)	Vehicle and equipment leaks; vehicle and equipment emissions; pesticides; fuel spills; equipment cleaning; improper fuel storage & disposal.	Toxic to humans and aquatic life at low levels.
Heavy Metals	Vehicle brake and tire wear; vehicle/equipment exhaust; batteries; galvanized metal; paint and wood preservatives; batteries; fuels; pesticides; cleaners.	Toxic at low levels; drinking water contamination.
Pathogens (Bacteria)	Livestock, bird and pet wastes; malfunctioning septic systems; sewer overflows; damaged sanitary lines.	Risk to human health leading to closure of shellfish areas and swimming areas; drinking water contamination.

USEPA defines an illicit discharge as any discharge to an MS4 that is not composed entirely of stormwater or the allowable non-stormwater discharges such as water from fire fighting activities, infiltrating groundwater, etc.. (See list below).

Chapter 2

II. ILLICIT DISCHARGE DETECTION AND ELIMINATION

Allowable Non-Stormwater Discharges

1. Water line flushing
2. Landscape irrigation
3. Diverted stream flows
4. Rising ground waters
5. Uncontaminated ground water infiltration (as defined in 40 CFR 35.2005 (20))
6. Uncontaminated pumped ground water
7. Discharge from potable water source
8. Foundation drains
9. Air conditioning condensation
10. Irrigation water, springs
11. Water from crawl space pumps
12. Footing drains
13. Lawn watering
14. Individual resident car washing
15. Flows from riparian habitats and wetlands
16. Dechlorinated swimming pool discharges
17. Street wash water
18. Residential building wash waters, without detergents

In our communities, the municipal separate storm drain systems discharge to receiving waterbodies without treatment. Therefore, it is particularly important that only stormwater is discharged and to ensure that illicit discharges are eliminated from the system. The General Permit requires that an effective IDDE program be developed by the regulated municipalities. The use of SOPs by JCDH and Storm Water Management Authority, Inc will allow for a unified approach to formulating an effective IDDE program. The Center for Watershed Protection's (CWP) *Illicit Discharge Detection and Elimination- A Guidance Manual for Program Development and Technical Assessments* (2004) , the New England Interstate Water Pollution Control Commission's (NEIWPCC) *Illicit Discharge Detection and Elimination Manual- A Handbook for Municipalities* (2003) , and *Guidelines and Standard Operating Procedures- Illicit Discharge Detection and Elimination and Pollution Prevention/ Good Housekeeping* were used to develop this chapter.

This chapter provides some procedures that are being employed or deemed necessary to create an effective IDDE program in accordance with the USEPA General Permit. City officials should have a good understanding of the types of illicit discharges that may be encountered and the proper procedures and roles that are deployed by Storm Water Management Authority, Inc, JCDH, and the local municipality to address the problems. Section 2.1 describes various types of illicit discharges that may be encountered throughout Jefferson County. The next sections address additional steps that can be taken or are currently underway to create an effective IDDE program. The subsequent sections will then address additional steps that are being taken by Storm Water Management Authority, Inc, Inc. and JCDH to create an effective IDDE program such as: locating priority areas within Jefferson County (Section 2.2), storm-drain mapping (Section 2.3), detecting illicit discharges (Section 2.4), tracing illicit discharges back to its source (Section 2.5), removing illicit

discharges (Section 2.6), and tracking illicit discharges (Section 2.7). Lastly, Section 2.8 provides an approach to evaluating the overall IDDE program.

2.1 TYPES AND SOURCES OF ILLICIT DISCHARGES

The USEPA defines an illicit discharge as *“any discharge to a regulated small MS4 or to the waters of the State of Alabama that does not consist entirely of stormwater or allowable non-stormwater discharges”*. Illicit discharges are often categorized according to frequency, which provides information about the source and helps determine which tracing procedures may be useful in locating the discharge. The following three categories provide a good basis for defining illicit discharges:

1. Transitory illicit discharges are typically single occurrence events resulting from spills, breaks, dumping or accidents. Transitory illicit discharges are often reported to an authority through the JCDH Stormwater Hotline (205) 930-1999, the local municipality, or through a municipal or JCDH employee observation while performing regular duties. Because they are not recurring, they are the most difficult to identify, trace, and remove. The best methods to reduce transitory discharges is through the use of education to the general public, municipal response personnel, tracking of discharge locations, and enforcement of an illicit discharge ordinance.
2. Intermittent illicit discharges occur occasionally over a period of time (several hours per day, or a few days per year). Intermittent discharges can result from legal connections to the storm drain system, such as a legal sump pump connection that is illegally discharging anything other than groundwater. Intermittent discharges can also result from activities such as a drum washing in exterior areas. These types of discharges are more likely to be discovered, and are less difficult to trace and remove, but can still present significant challenges. These discharges can have large or small impacts on waterbodies depending on pollutant content, duration, and the size of the receiving water body.
3. Continuous illicit discharges are typically the result of direct connection from a sanitary sewer, overflow from a malfunctioning septic system, inflow from a connection from a commercial or industrial facility. Continuous illicit discharges are usually easiest to trace and can have substantial pollutant loads. (CWP 2004).

Land use should be a major contributing factor when looking for illicit discharges. Table 2-1 provides a list of conditions and activities that may produce transitory and intermittent discharge, along with associated sources and land use. Table 2-2 lists possible sources of continuous discharges and their associated land use.

TABLE 2-1: LAND USES, LIKELY SOURCE LOCATIONS AND ACTIVITIES THAT CAN PRODUCE TRANSITORY OR INTERMITTENT ILLICIT		
Land Use	Likely Source Locations	Condition or Activity that Produces Discharge
Residential	<ul style="list-style-type: none"> • Apartments • Multi-family • Single family detached 	<ul style="list-style-type: none"> • Driveway cleaning • Dumping/spills (e.g., leaf litter and RV/boat holding tank effluent) • Equipment/vehicle wash-downs • Septic system maintenance • Swimming pool discharges
Commercial	<ul style="list-style-type: none"> • Campgrounds/RV parks • Car dealers/rental car companies • Car washes • Commercial laundry/dry cleaning • Gas stations/auto repair shops • Marinas • Nurseries and garden centers 	<ul style="list-style-type: none"> • Building maintenance (power washing) • Dumping/spills • Landscaping/grounds care • Outdoor fluid storage • Parking lot maintenance (power washing) • Vehicle fueling • Vehicle maintenance/repair • Vehicle washing • Wash-down of greasy equipment and grease traps

Industrial	<ul style="list-style-type: none"> • Auto recyclers • Beverages and brewing • Construction vehicle washouts • Distribution centers • Food processing • Garbage truck washouts • Marinas, boat building and repair • Metal plating operations • Paper and wood products • Petroleum storage and refining • Printing 	<ul style="list-style-type: none"> • Industrial process water or rinse water • Loading and un-loading area wash-downs • Outdoor material storage
Municipal	<ul style="list-style-type: none"> • Airports • Landfills • Maintenance depots • Municipal fleet storage areas • Ports • Public works yards • Streets and highways • Golf courses • Schools 	<ul style="list-style-type: none"> • Building maintenance (power washing) • Dumping/spills • Landscaping/grounds care • Outdoor fluid storage • Parking lot maintenance (power washing) • Road maintenance • Emergency response • Vehicle fueling • Vehicle maintenance/repair • Vehicle washing • Aircraft deicing

TABLE 2-2: LAND USES, LIKELY SOURCE LOCATIONS AND ACTIVITIES THAT CAN PRODUCE <u>CONTINUOUS</u> ILLICIT DISCHARGES	
Land Use	Condition or Activity that Produces Discharge
Residential	<ul style="list-style-type: none"> • Failed sanitary sewer infiltrating into storm drain • Sanitary sewer connection into storm drain • Failed septic systems discharging to storm drain system
Commercial/Industrial	<ul style="list-style-type: none"> • Failed sanitary sewer infiltrating into storm drain • Process water connections into storm drain • Sanitary sewer connection into storm drain
Municipal	<ul style="list-style-type: none"> • Failed sanitary sewer infiltrating into storm drain • Sanitary sewer connection into storm drain

SOURCE (Tables 2-1 and 2-1) : Modified from Illicit Discharge Detection and Elimination: A Guidance Manual for Program Development and

Technical Assessments, Center for Watershed Protection, 2004. p.12, Table 2.

The illicit discharge detection system provided by Storm Water Management Authority, Inc, Inc and JCDH uses these criteria to provide an effective detection and elimination program to address all types of illicit discharges.

2.2 LOCATING PRIORITY AREAS

Section 2.2 provides the methodology for locating priority areas that have a high potential for illicit discharges. Storm Water Management Authority, Inc, Inc and JCDH are continually evaluating/improving this process as changes arise and illicit discharges are removed (described in Section 2.6) This allows for a continuous modeling approach on where illicit discharge detection assets should be placed.

To locate priority areas within our municipalities JCDH is:

1. Continually monitoring watersheds for any substantial changes such as local water quality classifications (303 d and various others) by using current water quality monitoring for trending data. This helps divide the watershed into discrete areas that can obtain different priority levels.
2. Gathering and evaluating available information that provide clues as to where in the community illicit discharges might be found (e.g. older neighborhoods, industrial parks, and gentrified neighborhoods). This is done by taking data from ADEM issued NPDES permits, Sanitary Sewer Overflows, Land usage, and outfall quantity and type and plotting them using Geographical Information System (GIS) mapping technology. The maps are then examined for areas where concentrations of all these components tend to occur.
3. Using existing information to assess where illicit discharges may be found and what waterbodies are particularly sensitive (e.g. , drinking water sources, areas containing unique biodiversity, and swimming areas).

The following subsections present further discussion on each of these areas. The mapping and watershed prioritization conducted by Storm Water Management Authority, Inc, Inc and JCDH will help to manage each of these areas.

Natural Resource
Conservation Service (NCRS)
HUC

Level	Name	Number
1	Region	2 digit
2	Sub-Region	4 digit
3	Basin	6 digit
4	Sub-basin	8 digit
5	Watershed	10 digit
6	Subwatershed	12 digit
7	Drainage	14 digit
8	Site	16 digit

2.2.1 Identify Watersheds and Waterbodies

In order to identify priority areas where illicit discharges may occur, a decision must be made as to how to define an “area”. The Center for Watershed Protection recommends defining watersheds for individual waterbodies. The National Hydrograph Dataset has a Hydrologic Unit Code (HUC 10) that is used throughout Jefferson County. These 10 digit HUC codes provide an overall framework for delineating the 11 watershed areas within Jefferson County.

Figure 2-1 : Jefferson County HUC 10 Watersheds

This approach is particularly useful when reviewing the 303(d) list of impaired waters. Although wetlands are not taken into the HUC coding program they are taken into account in any water resource planning.

2.2.2 Review Available Information

Priority areas for our overall IDDE program will vary from one municipality to another depending on water quality conditions, land use, etc. The following is a list of resources that is compiled on a continual basis as well as a brief description of the factors used in the prioritization process:

- GIS land use maps - industrial areas with high density development may have a high potential to contain an illicit discharge.

Some Common Impairments in Jefferson County

- Nutrients
- Siltation
- Pathogens
- Pesticides (Dieldrin)
- Turbidity
- Temperature
- pH
- Oil and grease

- Locations of previous illicit discharges- areas with historical illicit discharge reports or previous citizen complaints are considered high priority.
- Approximate density of known outfalls per stream mile - areas with a high density of outfalls are considered high priorities.
- Age of infrastructure/development – older areas of the community with known high septic tank failure rates or improper stormwater infrastructure is considered a priority.
- Location of public sanitary sewer/age of sewer/date of separation – Older areas that were put on sewer long ago or have or have areas that are susceptible to pipe erosion are considered a priority.
- Water Quality Information

Water Quality Classification for the State of Alabama applicable to Jefferson County is as follows:

- Outstanding Alabama Water (OAW)
- Public Water Supply (PWS)
- Swimming and Other Whole Body Water-Contact Sports (S)
- Fish and Wildlife (F&W)
- Limited Warmwater Fishery (LWF)
- Agricultural and Industrial Water Supply (A&I)

For specific information on the classification of specific rivers go to:

http://www.epa.gov/waterscience/standards/wqslibrary/al/al_4_11wqs.pdf

ADEM 303(d) list – ADEM and EPA evaluate water quality of Alabama surface waterbodies and generate the 303(d) list of impaired water bodies. The list includes a description of the use that is impaired, the cause of the impairment, and the source. In some cases ADEM has identified illicit discharges or wet weather discharges as the cause. If one of the municipalities has a waterbody that is impaired due to wet weather or illicit discharges it becomes a priority to JCDH and Storm Water Management Authority, Inc, Inc. Impaired waters on the 303(d) list will be subjected to Total Maximum Daily Load (TMDL) standard for the pollutant of concern. This TMDL (when available) is factored into the overall IDDE program. This list is provided to the public at

<http://adem.alabama.gov/programs/water/wquality/2010AL303dList.pdf>

- Areas that drain to public beaches or drinking water sources – These areas are designated as high priority areas for public health and economic reasons.

It should be noted that the above list is not exhaustive. There may be additional data pertinent to locating priority areas that are constantly evolving. The use of any of these will be based on the personal knowledge and experience of JCDH as well as Storm Water Management Authority, Inc, Inc officials.

2.2.3 Evaluate Illicit Discharge Potential

The understanding of the unique waterbodies spread throughout the municipalities of Jefferson County allows the officials of Storm Water Management Authority, Inc, Inc and JCDH to establish a priority ranking. This will assign values of High Priority, Medium Priority, or Low Priority to each watershed. Table 2-4 provides an example of one of the components employed where criterion is evaluated for each waterbody and assigned an illicit discharge potential (IDP) of 1 for low potential, 2 for medium potential, and 3 for high potential. The scores for each waterbody are then averaged to produce a resultant overall score for the waterbody that will range from 1 (low priority) to 3 (high priority). Figure 2-2 shows a GIS mapping detection system that is the major component along with scoring that allows for priority areas to be assigned to each watershed.

The IDDE prioritization process allows Storm Water Management Authority, Inc, Inc and JCDH to focus their efforts on:

- Areas that need further mapping
- Community-specific detection techniques
- Prioritization of storm drain system maintenance work

**TABLE 2-4:
EXAMPLE PRIORITIZATION TABLE USING AVAILABLE INFORMATION**

	Land Use	NHDES Category on 303(d) List	Stormwater Outfall Density (# of Outfalls per Stream Mile)	Average Age of Development (years)	Raw IDP Score	Normalized IDP Score**
Area A	Commercial (2)*	Impaired – Other Source (2)*	14 (2)*	40 (2)*	8	2
Area B	Residential (1)	Not Impaired (1)	10 (2)	10 (1)	5	1.25
Area C	Industrial (3)	Impaired – Illicit Discharge or Stormwater (3)	16 (2)	75 (3)	11	2.75
Area D	Residential (1)	Not Impaired (1)	9 (1)	15 (1)	4	1
Area E	Residential (1)	No data available	21 (3)	20 (1)	5	1.67

Notes:

- The number in parentheses is the Illicit Discharge Potential (IDP) “score” (with 3 defined as a high IDP) earned for that area for the category identified. Basis for assigning scores (based on benchmarks) to assess IDP is defined as follows:

Category Definitions	Land Use	JCDH Category	Stormwater Outfall Density	Average Age of Development
High (3)	Industrial	Impaired-illicit discharge or stormwater	>20	>50
Medium (2)	Commercial	Impaired- other source	10-20	25-50
Low (1)	Residential	Not impaired	<10	<25

- Normalizing the raw IDP scores (by dividing the raw score by the number of screening factors assessed) will produce scores that fall into the Standard scale of 1 to 3 for low to high IDP, respectively.

SOURCE: Modified from Illicit Discharge Detection and Elimination: A Guidance Manual for Program Development and Technical Assessments, Center for Watershed Protection, 2004, p.53, Table 15.

Figure 2-2 Shades Creek Watershed

2.3 MAPPING THE SYSTEM

This section will focus on the development of a comprehensive storm drain map using GIS technology. The strategy used to build the storm drain map by JCDH and Storm Water Management Authority, Inc, Inc is as follows:

1. Review/ Office Preparation:
 - a) Existing GIS maps were checked for data in high priority areas first, then medium priority areas, then low priority areas. The maps used came from various sources including Jefferson County, Storm Water Management Authority, Inc, and various state and local agencies. The maps obtained showed land usage, development area patterns, tax maps, as well as old Storm Water Management Authority, Inc priority areas.
 - b) A naming and numbering system was developed for outfalls as well as GIS coordinates and pictures of all outfalls were stored in a data dictionary. This will facilitate future inspections and aid in documentation of maintenance.
 - c) A system of marking outfalls is being employed to help mark outfalls in the field. Spray paint is being examined but a more permanent system would be ideal.
 - d) Equipment was obtained for mapping including all on the list and a few items that are excluded.
 - e) A preliminary schedule was developed to show the various steps need to reach completion. This schedule is subject to change based on factors such as weather, creek level, or other factors.
 - f) Canoes were put into service for areas that could not be walked. Areas that have thick undergrowth were identified as areas to be walked during the fall or winter months.
 - g) Sampling sites and results were taken into account in what areas needed to be first priority.

2. Field verification:
 - a) All major waterbodies within a given area of a municipality are being walked and outfall data collected on a weekly basis. The outfalls are identified using a global positioning system (GPS) unit capable of 3-5 m accuracy. Pathfinder® is being used to post-process the points to even greater accuracy than the GPS unit alone can provide. The outfalls are also being assigned a number in the GPS data dictionary as well as a picture taken by the Trimble Juno GPS Unit.
 - b) Spray paint is used in the field to identify outfalls.
 - c) Dry weather sampling is being conducted in regular intervals at sites designated by JCDH on the major feeder creeks. There are 29 of these sites along the feeder creeks in our municipalities. Dry weather screening on outfalls is also conducted on complaints and whenever an opportunity presents itself.
 - d) Dry weather screen is also being conducted on each tributary area twice a year to document any pollutant loadings.

3. Develop Initial GIS Maps: The storm drain systems are being mapped as a larger part of the GIS database for the Storm Water Management Authority, Inc's municipalities. The new data collected has the option to be displayed with any of the existing data sets. JCDH has the ability to display aerial photography, street maps, municipal boundaries, and various other layers as backdrops for relevant GIS maps. Aerial photographs are one of the most interesting background files to use to display information; however, their large file size (20 MB and larger) can make them impractical for all applications. An alternate way to display our mapped information consisted of downloading either United States Geological Survey (USGS) quadrangles, or a set of roads, political boundaries, waterbodies, and watershed information from various other local and governmental sources.

TIN maps are used by JCDH to formulate 3-dimensional pictures of watersheds and how data can affect the waterbodies therein. The 3-dimensional maps allow water to be traced from source to areas where it will likely be terminate into a major feeder creek.

4. Review and field check other structures (catch basins, culverts, pipes, ditches, drain manholes, etc.):
 - a. Aerial photography was first used to identify stormwater detention structures. Field Staff along with local firemen are now in the process of locating various catch basins that are undetectable using aerial photography, and taking photographs of pipe locations and sizes. The design details will then be used to get a detailed overview of all structures. A GPS unit with a data logger is being used to take photographs and pinpoint locations.
 - b. Quality Assurance/ Quality Control is performed in the office on a daily basis on all data recorded.
 - c. All data collected has a unique point type and number assigned.
5. Incorporate field data into GIS and revise as necessary: Once the GPS data files have been converted into GIS layers, and revised maps have been produced; these maps are proofed to assess their accuracy and completeness. The JCDH reviewer documents any additional data requirements, and corrects any errors in the information collected. A relational database helps JCDH and local municipalities establish the connections between pipes, outfalls, and other structures.

The mapping database should be completed in a four year period depending on resources and availability starting on August, 1, 2010. Below in Figure 2-3 is a sample GIS map generated by JCDH.

Figure 2-3: Storm and Outfall GIS map

All storm drains are marked on a GIS database with a picture assigned to each one.

2.4 DETECTION

Dry Weather Discharge Definition

The CWP defines **dry weather** as a 48 hour period with no runoff producing rain fall. JCDH and Storm Water Management Authority, Inc define dry weather as a 48-72 hour period with less than 1/10-inch rainfall.

Illicit discharges can be detected in many ways. Determining which detection methods are appropriate for a municipality can be a relatively simple process. An example of this selection process is provided in Table 2-6. Sheets such as this as well as the following information are used to generate the areas and the frequency of inspections.

2.4.1 Dry Weather Inspections During Mapping (or initial inspections)

The Dry Weather Inspection Form (see Appendix A) can be used during the mapping to detect the continuous and intermittent discharges. The form is completed whenever evidence of an illicit discharge such as significant flow during dry weather, the presence of raw sewage indicators, staining, or residue, is observed. The discharge is then filed into a complaint form like the one seen below in Figure 2-5.

2.4.2 Long-Term Dry Weather Inspections

Long-term, regular inspections of outfalls are a primary part of JCDH’s IDDE program. Regular inspections are not significantly different from inspections conducted during mapping. The major difference is that a crew or inspector will have historical data to work with to make assessments. These inspections are kept in an electronic data base that is analyzed for any higher than expected sample values by using the bench marks in the Figure 2-4 below. The database is then used to direct inspectors on follow-up visits to investigate problem samples. The database also can provide a graph that gives a good baseline above which a sample should not reach. These sites are sampled at least four times a year and can be sampled on an as needed basis.

Figure 2-4: JCDH Sampling Program

Date Range: 7/6/2009 thru 7/6/2010

Site Name	Sample Date	Test Name	Result Value	Result Text	Unit	Weather	Sample Type	Lab Id	Lab Method
VES-CAR-076T	4/5/2010 1:15:00 PM	FECAL COLIFORMS	1	<1.00	COL/100ML	DRY	GRAB	20100 695-01	9222D
VES-CAR-078T	4/5/2010 2:15:00 PM	FECAL COLIFORMS	32	32.0	COL/100ML	DRY	GRAB	20100 696-01	9222D
VES-CAR-079T	4/6/2010 10:20:00 AM	FECAL COLIFORMS	66	66	COL/100ML	DRY	COMP	20100 704-01	9222D
VES-CAR-077T	4/7/2010 10:40:00 AM	FECAL COLIFORMS	28	28	COL/100ML	DRY	GRAB	20100 731-01	9222D

A schedule of long-term inspections for outfalls was then developed. The CWP recommends inspecting all outfalls once, at a minimum, during the first permit cycle in which JCDH is currently inspecting all outfalls and coming up with a grid system to allow for more efficient management of personnel. Further inspections are conducted to supplement the existing JCDH inspections as personnel and funds

allow. Long-term inspections are conducted during dry weather to maximize the potential to observe evidence of illicit discharges and form baseline trends. Winter and summer inspections are conducted at 29 sites to help monitor illicit discharges. The use of interns reduces cost, but to ensure quality of service each intern is trained in safety and identification techniques. If any problems are discovered a procedure is in place to allow for examination by more experienced personnel.

2.5.1 Opportunistic Inspections

Most public works crews conduct their regular duties in and around the storm drain system. A Supervisor may elect to have crews conduct outfall inspections on an informal basis while performing other work, or the supervisor may elect to have crews informally “keep a look out” for illicit discharges. If a city employee observes evidence of an illicit discharge during an informal or non-routine inspection, he/she should collect as much information about the potential illicit discharge as possible then contact his/her supervisor which will relay the information to the JCDH Stormwater hotline at (205)930-1999. A complaint form will then be generated by JCDH containing the information given and will be worked so as to alleviate the problem. A sample complaint form is shown on the next page in Figure 2-4.

Figure 2-4: Sample Complaint Form

Examples of Illicit Discharge Indicators

- Color
 - Floatables
 - Solids
 - Turbidity
 - Oil sheen
 - Grey mat
 - Odor
-

While it may not be possible for all municipal employees to be able to personally call in an illicit discharges. There should be several other ways they can help alleviate this problem such as:

- The person observing the discharge can provide the information verbally to a dispatcher or the supervisor, who can then call in the complaint to the hotline.
- Personnel can log into JCDH's website to report any complaint concerns; however this option may be a bit more time consuming and immediate needs should be called in.
- A "local" JCDH stormwater program employee can be called to come investigate the complaint on an as needed basis.

It is important to collect as much information as possible at the time of the initial observation due to the likelihood that a discharge may be transitory or intermittent. Initial identification of the likely or potential sources of the discharge is also very important.

2.5.2 Citizen Call-In Inspections

A citizen call-in program is an effective way to identify illicit discharges.

JCDH has a stormwater hotline that is accessible and publicized throughout the Storm Water Management Authority, Inc's municipalities. To maximize the effectiveness of citizen call-ins, the complaint system is filtered by an initial inspection so that each complaint is addressed and identified as valid. Upon validation the complaint is worked within 7-10 business days. The form is filled out with the citizen's information along with all relevant complaint information. There are a few ways through letters and faxes that anonymous complaints can be generated but most complaints must have an original complainant so as to be able to notify someone of the results. These are done by environmental health specialists as well as stormwater employees. The hotline is also accessible through JCDH's website at WWW.JCDH.ORG.

2.5.3 Septic System Inspections

Septic System inspections are conducted through JCDH's Community Environmental Protection Division. The older rural and low density areas that are prone to septic tank failures are identified first and any problem is reported internally to that division to handle. Any failure is then handled in a timely manner and the tank is pumped out until the failure is repaired to prevent leaking into the storm sewer system.

2.5 TRACING ILLICIT DISCHARGES

Once an illicit discharge has been reported or detected through an inspection, the next step is to locate the source. Selection of tracing techniques will depend on the type of illicit discharge detected, information collected during the initial discovery period, observation (whether through an inspection by a municipal employee, JCDH regular inspections, or through a citizen call-in), and the resources/technology available to the municipality. A single technique may be used or several techniques may be used in combination to identify the source of the discharge. Figure 2-5 presents a flow chart for selecting tracing techniques that can be applied to the two categories of potential illicit discharges: (1) transitory or intermittent discharges (where upon returning to the site, no flow is present at the location where the illicit discharge was initially reported), and (2) continuous discharges (where upon returning to the site a continuous flow is present and the flow may be more easily traced to its source). Each of these circumstances is described below:

1. Transitory or intermittent discharges: These conditions may occur as a result of an inspection or a citizen complaint. While initial information may have been collected regarding the potential illicit

discharge, a return trip may show that the discharge was either intermittent or transitory (e.g., no flow is present upon return to the site). The investigative techniques used will depend on whether or not a potential source location was identified during the initial observation:

Potential source identified - If a potential source for the illicit discharge was initially identified, steps are taken to investigate the potential source site, such as inspecting the site and storm drain system in the vicinity of the site. If floor drains, sumps, or other suspect discharge locations are observed during this inspection, dye testing, smoke testing, or continuous flow monitoring may be used. These techniques should definitively show whether the suspect site was the source of the illicit discharge.

Potential source not identified - If no source site is suspected, and only the general area of the illicit discharge is known, it may be possible to trace the evidence of the illicit discharge by visual inspection of the storm drain access points. If this catch basin/manhole inspection technique proves to be unsuccessful, some interim steps are taken attempt to capture water from an intermittent discharge. For example, sand bagging, damming or block testing of selected storm drain access points, combined with installation can help reveal the source of the discharge. If these techniques have no positive result (no water pools behind the weir or sand bag), the discharge was likely transitory (one time only), and it may not be possible to determine its origin. In this case, the location of the originally reported illicit discharge is added to the complaint database and tracked for any future incidents. If the original report of the illicit discharge was severe or gross pollution, then smoke testing or televising of the storm drain system may be warranted.

Figure 2-5
Flow Chart for Selecting Tracing Techniques

2. Continuous discharges: Tracing continuous discharges is typically easier than tracing transitory or intermittent discharges. The primary difference between tracing a transitory or intermittent discharge and tracing a continuous discharge is that sandbagging and weirs are not required for a continuous discharge. Visual observation of the system access points should reveal where the flow is coming from. Just as for tracing a transitory or intermittent discharge, if visual inspections fail in identification of the source and the original report was severe or gross pollution, then televising, smoke testing, or sample collection would be warranted. JCDH randomly collects a grab sample for bacterial analysis from any pipe with a significant flow, even if the discharge appears to be clear.

While these conditions may not cover the full extent of discharges that may be discovered, they should provide general guidance on the selection of tracing techniques. The following subsection describes in more detail each of the techniques that can be applied by JCDH, including their advantages and disadvantages.

2.5.1 Tracing Techniques

To select an effective tracing technique, one must have a good understanding of the technique and its limitations. The following is a brief summary of each of the tracing techniques that may be employed by JCDH to locate the source of an illicit discharge:

1. Visual Inspection at manholes/catch basins: This tracing technique is typically used when there is no suspected source site or in residential neighborhoods. It is the most cost effective and efficient method of tracing. Structures are inspected systematically starting at the initial detection location, gradually working upstream through the system. If the inspector is tracking a continuous discharge, the inspections may be relatively easy, and the flow can be traced back to its source. If the inspector is attempting to track a transitory or intermittent discharge, the inspector will make the following observations depending on the information provided from the initial identification: color and clarity of any discharge, staining or deposits on bottom of structure; oil sheen, scum, or foam on any standing fluids in sump of structure; odors, staining or deposits on inlet pipes

and outlet pipes. Depending on what the inspector is looking for, and what they find, they will progressively inspect additional structures until either a potential source is found, or no further evidence is found. If no further evidence is found the inspector may elect to further assess some of the structures by installing sandbags or other damming devices to determine if the discharge recurs. Inspectors are always equipped with proper safety equipment such as proper cone placement, safety vests in traffic areas, confined space entry techniques (if entry is necessary), steel-toed boots, etc.

2. Sampling flowing discharges: As shown in Figure 2-5, samples are collected only in the event a discharge is flowing through the outfall, unless a pollutant is clearly evident in stagnant pools of water or sump water. Table 2-8 lists the parameters that a sample can be analyzed for and provides a general discussion of how the results may be interpreted. This table was taken from the CWP manual (2004) which provides a more detailed discussion of sampling procedures and analysis of results. Sampling and analysis for many of the compounds should be completed by JCDH or other personnel trained in collection, handling, and preservation techniques to ensure accurate data. JCDH recommends collecting a sample when the discharge is initially found and after any source is removed. The sample collected after removing an illicit discharge can indicate if other illicit discharges are present. JCDH also holds the right to test any different chemical or pollutant at the inspector's discretion.

TABLE 2-8: INDICATOR PARAMETERS USED TO DETECT ILLICIT DISCHARGES					
Parameter	Discharge Types it can Detect				Laboratory/Analytical Challenges
	Sewage	Washwater	Tap Water	Industrial or Commercial Liquid Wastes	
Ammonia	●	☑	○	☑	Can change into other nitrogen forms as the flow travels to the outfall.
Boron	☑	☑	○	*	
Chlorine	○	○	○	☑	High chlorine demand in natural waters limits utility to flow with very
Color	☑	☑	○	☑	
Conductivity	☑	☑	○	☑	Ineffective in saline waters, generally highly variable.
Detergents - Surfactants	●	●	○	☑	Reagent is a hazardous waste.
E. coli Enterococci Total Coliform	☑	○	○	○	24-hour wait for results. Need to modify standard monitoring protocols to measure high bacteria concentrations.
Fluoride**	○	○	●	☑	Reagent is a hazardous waste. Exception for communities that do not fluoridate their tap water.
Hardness	☑	☑	☑	☑	
pH	○	☑	○	☑	
Potassium	☑	○	○	●	May need to use two separate analytical techniques, depending on the concentration.
Turbidity	☑	☑	○	☑	
<ul style="list-style-type: none"> ● Can almost always (>80% of samples) distinguish this discharge from clean flow types (e.g., tap water or natural water). For tap water, can distinguish from natural water. ☑ Can sometimes (>50% of samples) distinguish this discharge from clean flow types depending on regional characteristics, or can be helpful in combination with another parameter. ○ Poor indicator. Cannot reliably detect illicit discharges, or cannot detect tap water. * Data are not available to assess the utility as a single parameter, but when combined with additional parameters (such as detergents, ammonia and potassium), it can almost always distinguish between sewage and washwater. ** Fluoride is a poor indicator when used alone, but can distinguish between washwater and sewage when combined with analysis for detergents, ammonia and potassium. 					

SOURCE: Modified from *Illicit Discharge Detection and Elimination: A Guidance Manual for Program Development and Technical Assessments*, Center for Watershed Protection, 2004, p. 122, Table 39

3. Sandbagging or damming: Sandbagging and damming is typically only conducted when the discharge flow has ceased since initial detection. Application of this technique is sparsely used and will show whether the discharge is one time only (no water pools behind the sandbag or dam) or intermittent (water pools behind the sandbag). CWP provides the following explanation:

This technique involves placement of sandbags or similar barriers such as caulk dams within strategic manholes in the storm drain network to form a temporary dam that collects any intermittent flows that may occur. Any flow collected behind the sandbag is then assessed using visual observations or by indicator sampling. Sandbags are lowered on a rope through the manhole to form a dam along the bottom of the storm drain, taking care not to fully block the pipe (in case it rains before the sandbag is retrieved). Sandbags are typically installed at junctions in the network to eliminate contributing branches from further consideration. If no flow collects behind the sandbag, the upstream pipe network can be ruled out as a source of the intermittent discharge. Sandbags are typically left in place for no more than 48 hours, and should only be installed when dry weather is forecast. Sandbags should not be left in place during a heavy rainstorm. They may cause a blockage in the storm drain, or, they may be washed downstream and lost. The biggest downside to sandbagging and damming is that it requires at least two trips to each manhole (CWP, 2004, p.157).

4. Optical brightener monitoring traps: (JCDH is very limited in employing this specific technique because the effectiveness is yet to be determined) Optical brightener monitoring (OBM) traps can be used to trace intermittent or transitory discharges that result from washwater with detergent. Detergents usually contain optical brighteners that can be detected at high concentrations using this method. However, the traps only detect highly concentrated discharges. The detergent concentration required to be detected by the light is approximately the same as pure washwater from a washing machine. Consequently, OBM traps may be best suited as a simple indicator of the presence or absence of intermittent flow or to detect the most concentrated flows. The traps can be made using easily acquired materials.

The traps contain an absorbent, unbleached cotton pad or fabric swatch contained inside a wire mesh trap or section of small diameter (e.g., 2-inch) PVC pipe. The traps should be anchored to the inside of an outfall at the invert using wire or monofilament that is secured to the pipe itself. Rocks or bricks can be used a temporary weight to hold the trap in place.

JCDH inspectors can retrieve the OBM traps after 24 to 72 hours of dry weather. OBM traps are retrieved before coming into contact with stormwater, which will contaminate the trap or wash it away. When placed under a long wave fluorescent ultraviolet or “black” light, an OBM trap will indicate if it has been exposed to detergents. CWP reports that OBM traps have been used with some success in Massachusetts (Sergeant et al. 1998) and northern Virginia (Waye 2000).

5. Dye testing: (Green Fluorescent used by JCDH) Dye testing is typically conducted when a potential source site has been identified, and the inspector is trying to determine whether the site has floor drains or other locations that connect and discharge to the storm drain system. Permission to access the site must be obtained before dye testing can be conducted. Verbal or written requests by JCDH are both acceptable. The inspector should review available sanitary sewer and storm drain maps before conducting the dye testing. The dye testing procedure consists of two steps: (1) discharging the dye into the suspect location, and (2) opening nearby storm drain and sanitary sewer manhole covers to determine where the dye discharges to. This procedure is fairly effective for confirming direct connections into the storm drain system for short reaches. If a longer pipe network is being evaluated, charcoal packets can be left in selected structures and later collected and analyzed for the presence of the dye. If dye testing porcelain structures, tablets or charcoal should be wrapped in tissue before depositing. When dye testing, the inspector takes into account that each structure (sink, toilet, etc.) should be tested separately. Many times a single utility in a basement may be incorrectly connected to a storm drain line instead of a sanitary line.
6. Televising: (Not in use by JCDH at this time but Jefferson County Environmental Services employs this technique) Televised video inspections are a useful technique when an illicit connection or infiltration from a nearby sanitary sewer is

suspected, but little evidence of the illicit discharge remains behind. Two types of video cameras are available for use: (1) a small camera that can be manually pushed on a stiff cable through storm drains to observe the interior of the piping, or (2) a larger remote operated video camera on treads or wheels that can be guided through storm drains to view the interior of the pipe. Typically the operator of the camera has access to a keyboard or audio voice-over to record significant findings on the videotape that is produced for future review and evaluation.

7. Smoke testing: Smoke testing is a useful technique for tracing intermittent discharges or continuous discharges that have no apparent source site. Smoke is introduced into the storm drain system, and emerges at locations that are connected to the system. Smoke testing works best for short reaches of pipe, or in situations where pipe diameters are too small for video testing.

The Center for Watershed Protection provides the following discussion on planning and executing smoke testing:

JCDH must provide notice to the public in the immediate vicinity about the date and purpose of the smoke testing. The smoke used is non-toxic, but can cause respiratory irritation, which can be a problem for some residents. Residents will be notified prior to testing, and should be provided the following information (Hurco Technologies, Inc. 2003):

- Date testing will occur
- Reason for smoke testing
- Precautions they can take to prevent smoke from entering their homes or businesses
- What they need to do if smoke enters their home or business, and any health concerns associated with the smoke
- A number residents can call to relay any particular health concerns (e.g., chronic respiratory problems)

JCDH will also notify local media to get the word out if extensive smoke testing is planned (e.g., television, newspaper, and radio). On the actual day of testing, local fire departments and 911 call centers will be notified to handle any calls from the public.

The basic equipment needed for smoke testing includes manhole safety equipment, a smoke source, smoke blower, and sewer plugs. Two smoke sources can be used for smoke testing. The first is a smoke “bomb,” or “candle” that burns at a controlled rate and releases very white smoke visible at relatively low concentrations. Smoke bombs are suspended beneath a blower in a manhole. Candles are available in 30 second to three minute sizes. Once opened, smoke bombs should be kept in a dry location and should be used within one year.

The second smoke source is liquid smoke, which is a petroleum-based product that is injected into the hot exhaust of a blower where it is heated and vaporized. The length of smoke production can vary depending on the length of the pipe being tested. In general, liquid smoke is not as consistently visible and does not travel as far as smoke from bombs.

Smoke blowers provide a high volume of air that forces smoke through the storm drain pipe. Two types of blowers are commonly used: “squirrel cage” blowers and direct-drive propeller blowers. Squirrel cage blowers are large and may weigh more than 100 pounds, but allow the operator to generate more controlled smoke output. Direct-drive propeller blowers are considerably lighter and more compact, which allows for easier transport and positioning.

Three basic steps are involved in smoke testing. First, the storm drain is sealed off by plugging storm drain inlets. Next, the smoke is released and forced by the blower through the storm drain system. Lastly, the inspector looks for any escape of smoke above-ground to find potential leaks. Septic vents on rooftops are clear indicators of cross connections to the storm drain system.

One of three methods can be used to seal off the storm drain. (1) Sandbags can be lowered into place with a rope from the street surface. (2) Alternatively, beach balls that have a diameter slightly larger than the drain can be inserted into the pipe. The beach ball is then placed in a mesh bag with a rope attached to it so it can be secured and retrieved. If the beach ball gets stuck in the pipe, it can simply be punctured, deflated

and removed. (3) Finally, expandable plugs are available, and may be inserted from the ground surface.

Blowers should be set up next to the open manhole after the smoke is started. Only one manhole is tested at a time. If a smoke candle is used, the inspector simply lights the candle, places it in a bucket, and lowers it into the manhole. The inspector then watches to see where smoke escapes from the pipe. The two most common situations that indicate an illicit discharge are when smoke is seen rising from internal plumbing fixtures (typically reported by residents) or from sewer vents. Sewer vents extend upward from the sewer lateral to release gas buildup, and are not supposed to be connected to the storm drain system (CWP, 2004, p. 165-166).

2.6 REMOVING ILLICIT CONNECTIONS AND DISCHARGES

Regulated MS4 communities are required to adopt an ordinance or other regulatory mechanism to prohibit illicit discharges to their storm drain system. Storm Water Management Authority, Inc and JCDH operate off the *Erosion and Sedimentation Control Ordinance* that was instated on October 1, 1999. This ordinance allows for enforcement procedures that can be taken in the event of discovery of an illicit discharge. A new ordinance is set to be released within the 2011 calendar year and all illicit discharges should be referred to the most current ordinance. This section describes the procedures that should be taken for illicit discharge removal.

Table 2-9 summarizes the procedures that should be followed to ensure a timely and complete removal depending on the types of illicit discharges that may be discovered, and the various responsible parties. For most cases, the enforcement authority in the Ordinance will coordinate discharge removal.

**TABLE 2-9:
NOTIFICATION AND REMOVAL PROCEDURES FOR ILLICIT DISCHARGES INTO THE MUNICIPAL SEPARATE
STORM SEWER SYSTEM**

Financially Responsible Party	Source Identified	Enforcement Authority	Procedure to Follow
Private Property Owner	One-time illicit discharge (e.g., spill, dumping, etc.)	Ordinance enforcement authority (e.g., City official, JCDH official, or various other agencies)	<ul style="list-style-type: none"> • Contact Owner • Issue Notice of Violation • Issue fine for larger spills
Private Property Owner	Intermittent or continuous illicit discharge from legal connection	Ordinance enforcement authority (e.g., Code Enforcement Officer)	<ul style="list-style-type: none"> • Contact Owner • Issue Notice of Violation • Determine schedule for removal • Confirm removal
Private Property Owner	Intermittent or continuous illicit discharge from illegal connection or indirect (e.g., infiltration or failed septic)	Plumbing Inspector, JCDH Community Environmental Protection Division	<ul style="list-style-type: none"> • Notify plumbing inspector/ • Notify JCDH by complaint • Enforcement Action taken by JCDH
Municipal	Intermittent or continuous illicit discharge from illegal connection or indirect (e.g., failed sewer line)	Ordinance enforcement authority (e.g., City official, JCDH official, or various other agencies)	<ul style="list-style-type: none"> • Issue work order • Schedule removal • Remove connection • Confirm removal
Exempt 3 rd Party (see Section 2.6.4)	Any	USEPA	<ul style="list-style-type: none"> • Notify exempt third party and USEPA of illicit discharge

The following subsections address the issues of financial responsibility for removal (Section 2.6.1), forms and procedures that can be used in association with issuing a Notice of Violation (NOV) (Section 2.6.2), circumstances in which a municipality can take emergency action by referring directly to JCDH for discharges that are a threat to human health or the environment (Section 2.6.3), and procedures to follow when an illicit discharge from an exempt party is identified (Section 2.6.4).

2.6.1 Financial Responsibility

Once an illicit discharge's source has been identified, the financial responsibility of removing it is determined in the *Erosion and Sedimentation Control Ordinance* adopted by all Storm Water Management Authority, Inc municipalities on October 1, 1999. The following describes three cases that might be encountered:

- 1) The illicit discharge was a private party dumping into the storm drain system (a transient discharge). In this case, the *Erosion and Sedimentation Control Ordinance Article 7, Section 7.05* would allow for first a Notice of Violation, a Compliance Order, and/ or a Cease and Desist Order to be issued and a fine to be imposed of no less than \$100.00 and no more than \$500.00 a day or up to 180 days in jail.
- 2) The illicit discharge originated from a connection to the storm drain system (transient, intermittent, or continuous) that was once allowed. Such as an outdated overflow or anything of the nature. The overflow must be fixed on an as needed basis and appropriate action taken. A Notice of Violation could be issued and a fine could be imposed by JCDH if necessary. All washing machines, septic tanks, gray water generators, etc. are taken off through the Community Environmental Health Division of JCDH.
- 3) The illicit discharge resulted from an illegal connection (i.e., a connection that violates state plumbing codes). For intermittent or continuous discharges that are the result of an illegal direct connection into the storm drain system, the cost for disconnection will fall to either the property owner of the illegal connection or the municipality, depending on the circumstances of the connection. For example, if the connection was incorrectly applied during a separation project conducted by the municipality, the cost to correct the connection should be borne by the municipality. If the connection was the result of a private contractor working for the resident, the resident would be financially responsible for correcting the connection. Similarly, if the illicit discharge is the result of a failed sanitary sewer line, the party responsible for the failed sanitary sewer line must pay for the correction.

2.6.2 Notice of Violation

For violations of the *Erosion and Sedimentation Control Ordinance*, the Storm Water Management Authority, Inc municipalities issue a Notice of Violation. A Notice of Violation form will be generated by the municipalities and will look similar to the form shown in Appendix A. It

should be noted that the NOV describes a schedule for the removal to be completed, as well as a summary of any agreements between the parties.

2.6.3 Emergency Disconnections

The *Erosion and Sedimentation Control Ordinance* allows for a disconnection to the storm drain system for discharges that present “a threat to the environment or to the health or welfare of persons, or to the storm drain system”. Disconnections may include blocking pipes, constructing dams, or taking other measures on public ways or public property to physically block the discharge. The municipal enforcement authority for the ordinance may want to call the Jefferson County Department of Health at (205) 930-1230 or the Jefferson County Emergency Management Authority at (205) 254-2039 when making this determination for disconnection.

2.6.4 Discharges from Exempt Parties

Several categories of facilities are regulated by the USEPA for stormwater discharges under other permits. Because these facilities are already responsible to USEPA authority for stormwater discharges, the municipality can exempt them from the *Erosion and Sedimentation Control Ordinance*. If a municipality encounters an illicit discharge that is suspected or determined to be coming from an exempt party that is regulated under USEPA stormwater regulation, the municipality should notify both the suspected discharger and the enforcement authority for that discharger. The notification can be verbal or in writing. Most municipalities have prior experience working with other enforcement authorities for suspected violations of either state or federal law.

The following is a brief list of parties that are regulated under an alternate stormwater program and are present in the *Erosion and Sedimentation Control Ordinance, Article 4 Exclusions*:

TABLE 2-10: EXAMPLE EXEMPT FACILITIES		
Exempt Facility	Alternate Regulation They Are Subject To	Enforcement Authority
Alabama Department of Transportation (ALDOT) (in selected urbanized areas)	NPDES General Permit for Stormwater Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Part V	USEPA
Railroad facilities	NPDES General Permit for Stormwater Discharges from Small Municipal Separate Storm Sewer Systems (MS4s)	USEPA
Industrial Facilities with selected SIC codes (See Table 2-11 for a complete list)	Multi Sector General Permit for Industrial Activities	USEPA

As shown in Table 2-9, if a municipality identifies that an illicit discharge has come from one of these facilities, they should notify both the discharger and the enforcement authority verbally or in writing of the activity. Standard Industrial Classification (SIC) codes for NPDES Stormwater Multi-Sector General Permit (MSGP) Industrial Facilities are listed in Table 2-11.

Sector Name	SIC Code Listing
Sector A: Timber Products	2411, 2421, 2426, 2429, 2431–2439 (except 2434), 2448, 2449, 2451, 2452, 2491, 2493, 2499
Sector B: Paper and Allied Products	2611, 2621, 2631, 2652–2657, 2671–2679
Sector C: Chemical and Allied Products	2812–2819, 2821–2824, 2833–2836, 2841–2844, 2851, 2861–2869, 2873–2879, 2891–2899, 3952 (limited to list)
Sector D: Asphalt Paving and Roofing Materials and Lubricants	2951, 2952, 2992, 2999
Sector E: Glass Clay, Cement, Concrete, and Gypsum Products	3211, 3221, 3229, 3231, 3241, 3251–3259, 3261–3269, 3271–3275, 3281, 3291, 3292, 3296, 3297, 3299
Sector F: Primary Metals	3312–3317, 3321–3325, 3331–3339, 3341, 3351–3357, 3363–3369, 3398, 3399
Sector G: Metal Mining (Ore Mining and Dressing)	1011, 1021, 1031, 1041, 1044, 1061, 1081, 1094, 1099
Sector H: Coal Mines and Coal Mining Related Facilities	1221–1241
Sector I: Oil and Gas Extraction and Refining	1311, 1321, 1381–1389, 2911
Sector J: Mineral Mining and Dressing	1411, 1422–1429, 1442, 1446, 1455, 1459, 1474–1479, 1481, 1499
Sector K: Hazardous Waste Treatment, Storage, or Disposal Facilities	HZ
Sector L: Landfills and Land Application Sites	LF
Sector M: Automobile Salvage Yards	5015
Sector N: Scrap Recycling Facilities	5093
Sector O: Steam Electric Generating Facilities	SE
Sector P: Land Transportation and Warehousing	4011, 4013, 4111–4173, 4212–4231, 4311, 5171
Sector Q: Water Transportation	4412–4499
Sector R: Ship and Boat Building or Repairing Yards	3731, 3732
Sector S: Air Transportation	4512–4581
Sector T: Treatment Works	TW
Sector U: Food and Kindred Products	2011–2015, 2021–2026, 2032, 2041–2048, 2051–2053, 2061–2068, 2074–2079, 2082–2087, 2091–2099, 2111–2141
Sector V: Textile Mills, Apparel, and Other Fabric Product Manufacturing, Leather and Leather Products	2211–2299, 2311–2399, 3131–3199 (except 3111)
Sector W: Furniture and Fixtures	2434, 2511–2599
Sector X: Printing and Publishing	2711–2796
Sector Y: Rubber, Miscellaneous Plastic Products, and Miscellaneous Manufacturing Industries.	3011, 3021, 3052, 3053, 3061, 3069, 3081–3089, 3931, 3942–3949, 3951–3955 (except 3952 facilities as specified in Sector C), 3961, 3965, 3991–3999
Sector Z: Leather Tanning and Finishing	3111
Sector AA: Fabricated Metal Products	3479, 3411–3499, 3911–3915
Sector AB: Transportation Equipment, Industrial or Commercial Machinery	3511–3599 (except 3571–3579), 3711–3799 (except 3731, 3732)
Sector AC: Electronic, Electrical, Photographic, and Optical Goods	3571–3579, 3612–3699, 3812–3873
Sector AD: Non-Classified Facilities	N/A

2.7 TRACKING ILLICIT DISCHARGES

JCDH has developed a long-term stormwater complaint tracking program that can help municipalities better understand the origins of illicit discharges and identify maintenance issues for the storm drain system structures. The complaint tracking program will also facilitate evaluation of the overall IDDE program and will expedite annual reporting. The tracking program is based to address illicit discharge and maintenance issues resulting from the following:

- Citizen's Complaints
- Opportunistic Inspections (such as if an illicit discharge is found while doing outfall monitoring in which JCDH has a self complaint system in place)
- Regular Long Term Inspections (if a sample comes back with high readings any follow-up tests are logged in the complaint system)
- Removal Actions Taken

2.7.1 *Electronic Database*

A GPS data dictionary has been created that includes all the fields on the Dry Weather Outfall Inspection Form. The advantage to this type of tracking program is that the database can be easily linked into GIS. Linking to GIS has allowed mapping of illicit discharge locations, citizen complaint locations, and many other IDDE issues which have assisted greatly in the overall program. Figure 2-12 contains some of the simple attributes that are used in the database. JCDH uses a sequel server database as well for sample technique, results inventory, and an excel spreadsheet for location data.

2.8 EVALUATING THE PROGRAM

JCDH evaluates their IDDE program at the end of each year to assess its' effectiveness, efficiency, and to identify where improvements are needed. Table 2-13 is a worksheet that is used at the end of the fiscal cycle to evaluate the following components:

- 1) Priority Areas: Are the priority areas initially identified still appropriate? Considerations include reviewing the priority worksheet to assess if any changes have occurred since the initial evaluation was completed (such as: Have additional illicit discharges been discovered in any of the areas or is there significant development? Has a new 303(d) list come out naming new waterbodies as impaired?). JCDH also takes into account any negative sample trends in if priority area scopes need to be limited or expanded.
- 2) Detection Program: Is the detection program effective? Documenting the number of illicit discharges detected by the various detection mechanisms (inspections, citizen call-ins, opportunistic inspections) helps to decide where to allocate resources. This is becoming more extensive as the database at JCDH grows.
- 3) Tracing Techniques: What tracing techniques were generally used (site inspections, damming, etc)? What tracing techniques were generally effective? In how many instances were visual inspections of the area sufficient to identify the source of the illicit discharge (% effective)? Were there any times the equipment necessary to effectively trace an illicit discharge was not used because it was not available, was too costly to obtain, or not deemed a priority? Documenting the effectiveness of tracing techniques helps to evaluate how efficient the inspector is at the technique and if training is needed on where best to employ the technique.

Although completing an evaluation of the overall IDDE program may be time consuming and labor intensive, its benefits helps to reduce the costs for future inspection and IDDE efforts, which allows us to employ more efforts in other areas of the program. Keeping track of where illicit discharges are likely to occur and what techniques are useful can help lead to an effective identification program between JCDH and Storm Water Management Authority, Inc's municipalities

Comments/Recommended Changes ⁽⁶⁾

Instructions: This worksheet is for Program Managers to evaluate their IDDE Program.

1. Fill in the names of the priority areas in your municipality.
2. List any factors that have changed since the initial prioritization (i.e. have additional illicit discharges been discovered in these areas, has a new 303(d) list come out naming new waterbodies as impaired, etc.).
3. Circle the applicable recommended change.
4. Fill in the number of illicit discharges identified and subsequently resolved for each detection mechanism used.
5. Fill in the different tracing techniques that were used (visual, sampling, sandbagging, OBM, dye/smoke testing, televising), and check whether they were effective or ineffective for each applicable detection mechanism that they were used for. If the method was ineffective, comment on why it was ineffective and how it could be improved.
6. Note any additional comments or recommended changes.

Chapter 3

III. POLLUTION PREVENTION AND GOOD HOUSEKEEPING

Many municipal activities can result in stormwater pollution if not conducted properly. Activities such as vehicle maintenance, fueling, and landscaping involve handling, storage, and use of chemicals and petroleum products that must be used properly to prevent stormwater from becoming polluted. In addition, construction activities conducted during general maintenance of infrastructure can result in sedimentation and erosion of soil that can be swept by stormwater into the storm drain system or directly into waterbodies.

- a) *Develop and implement a program with a goal of preventing and/or reducing pollutant runoff from municipal operations. The program must include an employee training component.*
- b) *Include, at a minimum, maintenance activities for the following: parks and open space (areas such as public golf courses and athletic fields); fleet maintenance, building maintenance; new construction and land disturbance; roadway drainage system maintenance, post-construction plans; and stormwater system maintenance.*
- c) *Develop schedules for municipal maintenance activities described in paragraph (b) above.*
- d) *Develop inspection procedures and schedules for long term structural controls.*

**TABLE 3-1:
GOOD HOUSEKEEPING/POLLUTION PREVENTION SOPs/ACTIVITY MATRIX**

B.26 Deicing Material Storage				
B.27 Deicing Material Application				

To address these components, this Chapter is divided into four subsections that describe four major categories of operations completed by each municipality:

- Vehicle/Equipment Maintenance (Section 3.1)
- Facilities Maintenance including parks and open space (Section 3.2)
- Storm Drain System Maintenance (Section 3.3), and
- Construction Activities (Section 3.4)

Each of these four operational areas contains a diverse set of activities, for which SOPs are appropriate. SOPs associated with each of these operational areas are contained in Appendix B. The SOPs outline the management and maintenance procedures that are used to minimize impacts on stormwater. Some of the SOPs apply to more than one operational area. For example, both vehicle maintenance and facilities maintenance require handling, storage, and disposal of petroleum products. Therefore, the SOPs for petroleum handling, storage and disposal in Appendix B address both of these operational areas. Table 3-1 shows the relationship between the SOPs that are contained in Appendix B and the operational areas that are described in this Chapter.

What is a “regulated contaminant”?

JCDH defines any regulated contaminant as “any physical, chemical, biological, radiological substance or other matter other than naturally occurring substances at naturally occurring levels, in water which adversely affects human health or the environment.” The Material Safety Data Sheets (MSDS) should be consulted for the products you use; See disposal information in the “Spills or Leaks” Section of the MSDS.

3.1 VEHICLE AND EQUIPMENT MAINTENANCE

The SOPs related to vehicle maintenance have three basic structural components:

- 1) Store chemicals, wastes, and vehicles inside whenever possible to minimize their potential to pollute stormwater.
- 2) Handle with care to avoid spills. Preventing spills is the best way to minimize stormwater contact with chemicals and petroleum products.
- 3) Recycle whenever possible. When it is not possible to recycle, Use proper disposal procedures to ensure contact with stormwater is minimized.

Seven common vehicle maintenance activities are described below. To assist each Storm Water Management Authority, Inc municipality in understanding what are the best methods to protect stormwater from becoming polluted by these activities, a worksheet-style aid is being given by JCDH to each facility that provides for stormwater pollution prevention methods for each activity immediately following the description of that activity. It is recommended that each municipal

JCDH rules prohibit any discharge to the ground of non-domestic wastewater containing any regulated chemicals.

employee become familiar with the worksheets applicable for your facility and practice filling them out as you review this section.

1. **Floor Drains:** Facility managers should be able to positively identify the discharge location of their floor drains. If the discharge location is unknown, it should be determined by visual inspections. Available methods to determine the discharge location include: televising or dye testing in which a bottle can be obtained from JCDH (see Section 2.5 for discussion of advantages and disadvantages of each method). Floor drains should either be connected to a regularly maintained septic tank or to a regularly maintained oil/water separator that discharges to the sanitary sewer. The facility should connect the floor drains to the appropriate device or close and seal the floor drains, and run a “dry shop”. Public works facilities typically store or use “regulated contaminants” in the area served by the floor drain. Therefore, these floor drains must be closed, rerouted to the sanitary sewer via an oil/water separator, or rerouted to a septic tank registered with the JCDH (205)930-1230.

2. Parts Cleaning: Most vehicle maintenance facilities use one of three methods to clean parts: chlorinated solvents, citrus-based cleaners, or aqueous base cleaners. If chlorinated solvents are used, they should be disposed of as hazardous waste by a licensed hazardous waste contractor. Citrus based cleaners can be recycled by an off-site contractor reducing overall cost of its use. Steam cleaning or use of a commercial aqueous washer allows discharge to the sanitary sewer. Using non-hazardous chemicals reduces the risk of stormwater pollution.

3. Petroleum Storage: ADEM regulates above-ground storage tanks (ASTs) when a facility is storing more than 660 gallons of used oil or fuel, or when a facility is storing more than 10,000 gallons of heating oil used for on-site heating. ADEM requires registration of ASTs and requires interstitial monitoring and double walls on all tanks. Federal regulations (40 CFR Part 112) require development of a Spill Prevention Control and Countermeasure Plan (SPCC) for facilities that store more than 1,320 gallons of any petroleum product. These regulations help protect stormwater by requiring regular inspections and development of spill prevention and clean-up procedures. Facility managers should understand and follow the regulations that apply to their facility.

To Register an AST

Call ADEM AST
Program at (334)394-
4399

4. **Petroleum Disposal:** Proper disposal of petroleum products can minimize their impact on stormwater. Used oil can be recycled with a marketer who has registered with the ADEM. Used oil can also be burned on-site by a municipality for energy recovery as long as the oil has not been mixed with any other fuels or chemicals. Municipalities must notify ADEM of their used oil management activities if they are burning used oil on-site. Other wastes generated should be managed as follows:

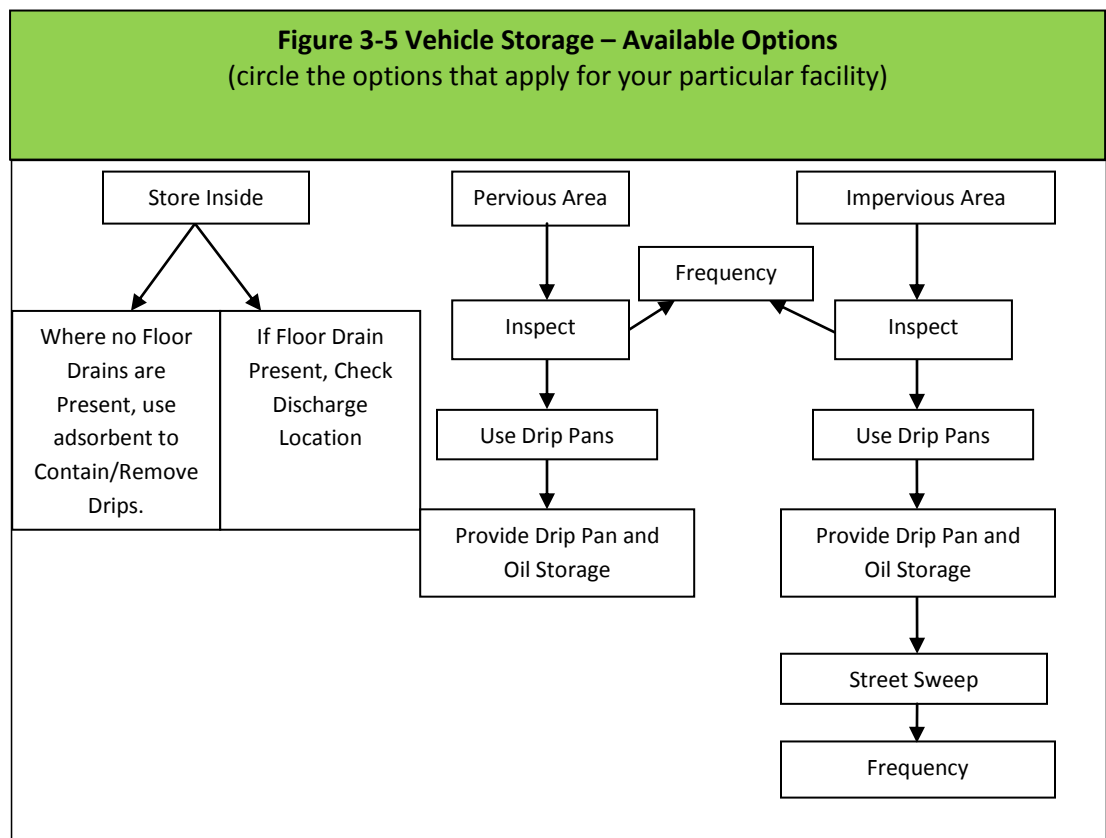

- Diesel fuel and gasoline, or any mixture of oil and water, must be managed as hazardous waste and should not be mixed with used oil.
- Sludge from floor drains should be analyzed for Toxicity Characteristics Leaching Procedure (TCLP) prior to disposal to determine if it is hazardous waste.
- Residual solids from oil spills may be managed as solid waste, unless the residuals are from a volatile fuel such as gasoline. Volatile fuel residuals must be managed as a hazardous waste.

Municipalities burning used oil onsite must register with ADEM

(334)271-7730

5. **Vehicle Storage:** Vehicles should be stored indoors in an area where there are no floor drains or where any floor drains have been properly connected and registered(see above). If vehicles cannot be stored indoors, they can be stored on impervious areas that are inspected on a regular basis and which can be cleaned with a street sweeper as necessary. Vehicles can be stored on pervious (unpaved) areas that are inspected on a regular basis to assess if drip pans are necessary. Drip pans should always be used to collect leaking fluids. A dedicated, convenient storage area should be provided and clearly labeled for the drip pans and for the fluids they will contain. Leaking vehicles should be repaired as soon as practical to minimize stormwater pollution.

To Register a Car Wash Facility:

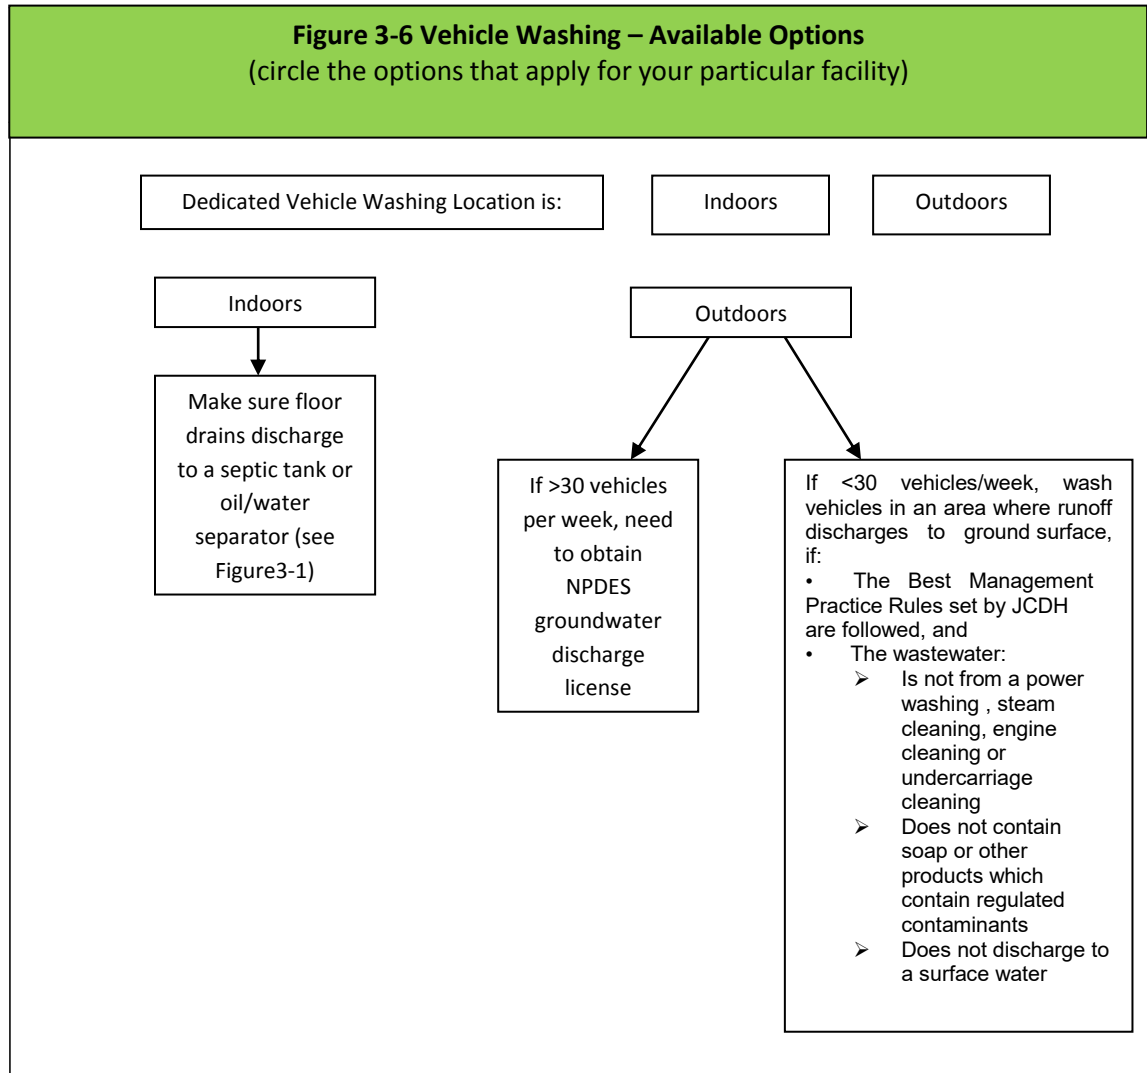

Call ADEM at (334) 271-4367 or for any other questions call JCDH at (205)930-1230

6. **Vehicle Washing:** If vehicles are washed regularly onsite, they should be washed in a dedicated area. The area can be:
 - 1) Indoors, if the washwater is discharged to floor drains that are properly connected to the septic tank or the sanitary sewer (See Figure 3-1),
 - 2) Outdoors; however if you wash more than 30 vehicles per week you must obtain a NPDES Groundwater Permit from ADEM, or
 - 3) Outdoors if you wash fewer than 30 vehicles per week and discharge to the ground surface, if:

To register a vehicle washing activity (when less than 30 vehicles per week):

Contact JCDH
Stormwater Division at
(205)930-1230

- The Best Management Practice Rules are followed,
- The activity is registered with JCDH or ADEM, and
- The wastewater is not from power washing, steam cleaning, engine cleaning, or undercarriage cleaning or does not contain soaps or other products which contain regulated contaminants.
- Does not discharge to a surface water or storm inlet

7. Vehicle Fueling: Vehicle fueling areas are a significant generation point for petroleum contamination of stormwater. Vehicle fueling areas should be impervious surfaces, and should be inspected and swept with a street sweeper on a regular basis. A spill kit and covered garbage container should be located near the fueling area and should be well labeled for individuals to use when needed.

Figure 3-7 Vehicle Fueling – Available Options (Circle the options that apply for your particular facility)		
Spill Kit Location: _____	→	Street Sweep
	→	Frequency: _____

An important component of stormwater protection at vehicle and equipment maintenance facilities is general good housekeeping. Conducting regular inspections of a facility can be an effective pollution prevention technique. The following is a list of areas facility Managers should consider when developing their own inspection checklist:

- 1) Check refuse areas for trash on the ground that could contaminate stormwater.
- 2) Check exterior vehicle and equipment areas for leaks, spills, drips, or excess dirt. Consider if street sweeping is necessary and if drip pan use is acceptable.
- 3) Check fueling areas for leaks, spills, or drips.
- 4) Check exterior petroleum storage areas for leaks, spills, or drips.
- 5) Check or clean-up of tracked sand and/or salt.
- 6) Check calcium chloride tank for leaks, spills, or cracks.
- 7) Check vehicle washing area for excess sediment and wastes..
- 8) Check oil/water separator in floor drain system to ensure it is functioning, and clean if necessary.
- 9) Clean catch basin grates around facility for entering stormwater.

Table 3-2 is an example inspection checklist that should be used on a regular (monthly or quarterly) basis to identify areas of potential stormwater pollution. Table 3-3 contains a blank form that the Facility Manager should fill in for their facility and return to the governing municipal official as soon as practical. These forms will be used to track the stormwater duties performed by each facility for the Storm Water Management Authority, Inc's annual report.

**TABLE 3-2:
EXAMPLE INSPECTION CHECKLIST**

Municipality: _____ **Facility Manager:** _____
Date: _____ **Inspector:** _____

Inspection Area	Practice Followed	Comments	Date Resolved (if applicable)
Check refuse areas for trash on the ground that could contaminate stormwater or be washed away in stormwater	Acceptable/Needs Attention		
Check all exterior vehicle and equipment areas for leaks, spills, drips, or excess dirt – Street sweeping necessary?	Acceptable/Needs Attention		
Check all exterior vehicle and equipment areas for leaks, spills, drips, or excess dirt – Drip pan use acceptable?	Acceptable/Needs Attention		
Check fueling areas for leaks, spills or drips	Acceptable/Needs Attention		
Check exterior petroleum storage areas for leaks, spills, or drips	Acceptable/Needs Attention		
Clean-up of tracked sand that might allow stormwater transport of sand	Acceptable/Needs Attention		
Clean-up tracked salt that might result in stormwater transport	Acceptable/Needs Attention		
Check calcium chloride tank for leaks, spills or cracks	Acceptable/Needs Attention		
Check vehicle washing area for excess sediment or wastes	Acceptable/Needs Attention		
Other:	Acceptable/Needs Attention		
Other:	Acceptable/Needs Attention		

Instructions: This form needs to be used for regular (quarterly) inspections at vehicle/equipment maintenance facilities. Program Managers should fill in the areas to be inspected for their facilities (refer to Section 3.1 and Table 3.2 Example Inspection Checklist). When the checklist is used during an inspection, the inspector needs to fill in the date as well as his/her name, circle either “Acceptable” or “Needs Attention”, and note comments for each inspection area.

3.1 FACILITIES MAINTENANCE

Most Storm Water Management Authority, Inc municipalities own and maintain their own buildings, parks, and other green spaces while others rely on Jefferson County to provide this service. Those that have their own maintenance staff perform general maintenance activities that include mowing and trimming, painting, pest control, weed control, and all of the chemical and petroleum handling that is associated with these activities. The SOPs contained in Appendix B provide best management practices to protect stormwater from the potential hazards associated with each of these maintenance activities. Facilities maintenance personnel should be trained in each of the SOPs associated with their job by their respective cities or JCDH.

In addition to training municipal employees on the SOPs in Appendix B that affect their jobs, a formal street sweeping program can reduce pollutant loads from road salt and can reduce sand export to receiving waters. Street sweeping also reduces the amount of sediment, debris, and organic matter being washed away by stormwater. A street sweeping schedule will need to be kept similar to the one shown in Appendix B and presented to Storm Water Management Authority, Inc.

USEPA does not recommend how frequently a community should sweep, but most sweeping of municipal lots and roadways should be performed at least once per year. An appropriate schedule for street sweeping should be determined based on each municipality's specific needs. Heavy traffic areas can be swept weekly or monthly, depending on a community's available resources. Other locations, such as construction entrances, sand/salt loading areas, vehicle fueling areas, and vehicle and equipment storage areas should be swept on an as needed basis.

The State of Alabama has no formal standards that would not allow municipalities to reuse street sweepings in accordance with the Environmental Fact Sheet shown below. Street sweepings may be reused as long as they do not contain visual evidence of wastewater, animal wastes, oil or other petroleum products. Catch basin residuals must be tested to determine if they may be reused. Table 3-4 lists the compounds, the S-1 limits which allow unrestricted reuse, and the S-3 limits which allow reuse as a road base or subbase. Visually contaminated street and catch basin residuals must also be tested to determine if they contain hazardous wastes.

Table 3-4 Soil Standards Catch Basin Cleanings Reuse Guidance			
Maximum Contaminant Concentrations			
<i>Regulated Contaminant</i>	<i>S-1 Standards (mg/kg)</i>	<i>S-3 Standards (mg/kg)</i>	<i>USEPA SW-846 Test Method</i>

3.2 STORM DRAIN SYSTEM MAINTENANCE

Storm drain system maintenance consists of three components: cleaning, repairing (or retrofitting), and upgrading. Historically, storm drain systems have been repaired or upgraded only when catastrophic failures have occurred, such as those causing

flooding, road failures, or severe erosion. The General Permit requires that each Storm Water Management Authority, Inc regulated municipality develop a maintenance schedule for the storm drain system, as well as inspection procedures and schedule for long term control structures. The storm drain mapping currently being performed by JCDH will be presented to each city upon completion. The estimated time frame with current resources should be able to meet the five years required from October 1, 2010. The completion date will hopefully be sooner through cooperative programs with the municipality fire departments and other agencies. This will allow for cities to make better estimates on where to expend fiscal resources to get the biggest impact on Storm Water infrastructure instead of the as-needed maintenance system in place now.

Conveyance System Maintenance

Section 2.2 of this Manual reviews how JCDH divides a municipality into distinct areas and prioritizes the areas based on their illicit discharge potential. A future component of that evaluation will be to consider the age and material of the infrastructure, which is an indicator of failure potential. This prioritization can be used in the future to aid in developing a maintenance program for the system.

Additional useful resources include the municipal capital budget and the GASB 34 accounting information. All of these items should be reviewed and evaluated to identify where and when repairs, retrofits, and upgrades should be conducted. The storm drain system maintenance program can be developed using a process that is similar to the local pavement management program. The following paragraphs provide guidance to city managers in developing an operation and maintenance program.

- 1) Vitrified clay (terracotta) storm drain pipe, asbestos cement pipe, or corrugated metal pipes in older areas should be replaced or retrofitted as part of other infrastructure work (street reconstruction, or combined sewer overflow (CSO) work). Televising and/or manual inspections should be performed to confirm the degree of repair or replacement necessary.
- 2) An inspection and replacement program should be developed for newer pipes and structures in order to conduct preventative maintenance that can affect long-term cost savings and avert catastrophic failures. The inspection and replacement program should consist of the following items:
 - Storm Drain Pipe/Outfall Cleaning and Inspections

- A cleaning and inspection prioritization should be established by all municipalities for storm drain pipes and outfalls. The City Manager should consider conducting annual inspections on storm drains and outfalls in high priority areas. Less frequent inspections (every 2 to 3 years) should be completed for medium and low priority areas. Inspections for structural conditions should be combined with the inspections for illicit discharges as described in Section 2.4.2. JCDH is helping to aid municipalities in this endeavor through the mapping of the storm drain and outfalls by providing information on the condition and sedimentation loading of each pipe.
- Catch basin Cleaning and Inspection – A prioritization plan should also be established for catch basin cleaning. The prioritization can be completed by the City Manager using the following two considerations: (1) amount of winter sand spread in different areas (this will be zero for most cities but should still be included in the plan), and (2) areas that have historically accumulated a large quantity of sediment or debris. This prioritization should be reviewed and updated frequently. The re-evaluation should use the same two criteria listed above (sand application and historical sediment accumulation). City Managers should identify a reasonable frequency of cleaning based on need, municipal budgets, and personnel availability. JCDH and Jefferson County can provide some assistance to cities without their own capabilities

The Catch Basin Cleaning Form contained in Appendix A, should be used during cleaning as a method to inspect the catch basins to evaluate the integrity of the structure and identify necessary repairs. Any repairs identified on the forms should be incorporated into the municipality's work order system. Communities that outsource catch basin cleaning should either require that the contractor use the inspection form or should consider sending a public works employee, intern, or other municipal representative along with the contractor to evaluate structures. This form will be used by Storm Water Management Authority, Inc and JCDH to estimate the effectiveness of the program so all forms should be

completed and given to the relevant agency.

- Ditches and Swales Maintenance - Many Storm Water Management Authority, Inc municipalities have rural areas, where the storm drain system consists of roadside ditches. Sediment, grass clippings, winter sand, leaves, excess vegetation and other debris periodically impedes the proper function of these ditches and should be removed approximately annually. Ditch cleaning can be conducted manually or using heavy equipment. Ditch cleaning should be conducted during low water periods, minimizing the disturbance to existing vegetation. If existing vegetation is removed during ditch cleaning, the ditch side slopes should be seeded and mulched as soon as possible after dredging. Ditch cleaning with heavy equipment should not be conducted in areas where the ditch carries a perennial stream unless specifically approved by the Army Corp of Engineers. Pesticide use should also be kept to a minimum in these sensitive areas due to their direct impact on waterways.

3.3.1 Long Term Control Structure Inspection and Maintenance

In addition to the storm drain pipes, catch basins and outfalls, long term control structures such as detention ponds, vegetated filter strips, grass swales, and constructed wetlands must be inspected and maintained.

ADEM produces a BMP Manual that tells the design features for these BMPS that must be maintained. JCDH is working on a Manual that will tell the frequency of maintenance needed for these devices and is targeted for release in August 2012. The following table 3-5 provides recommended maintenance requirements from *NHDES BMPs for Urban Stormwater Runoff* to provide some general guidance until the manual can be released.

TABLE 3-5: RECOMMENDED MAINTENANCE ON COMMON LONG-TERM STORMWATER BMPs	
Structure Type	Maintenance Requirements
Extended Detention Pond (Dry)	<p>The embankment should be inspected annually to determine if rodent burrows, wet areas, or erosion of the fill are present. Trees and shrubs should be kept off the embankment and emergency spillway areas.</p> <p>The vegetation should be mowed once per year to discourage woody growth. Vegetation should be managed without the aid of fertilizers.</p> <p>If vegetation is sparse or non-existent, test soils for proper nutrients/growing conditions and re-vegetate with drought-tolerant.</p> <p>Pipe inlets and outlets should be inspected annually and after major storm events.</p> <p>Sediment should be continually checked in the basin and removed as necessary.</p> <p>The structure should be inspected by a qualified professional on a periodic basis.</p>
Vegetated Filter Strips	<p>A properly designed and constructed filter strip should require little maintenance. It should be inspected frequently during the first year of operation and then annually thereafter. Large accumulations of sediments should be removed, and all gullies filled in and stabilized. Areas of bare soil should be immediately stabilized.</p>
Grassed Swales	<p>Swales should be mowed at least once per year to prevent the establishment of woody vegetation.</p> <p>Sediments should be removed as required and swale reseeded if necessary.</p> <p>Grass should not be mowed to less than three inches in height.</p>
Wet Ponds and Constructed Wetlands*	<p>The embankment should be inspected annually to determine if rodent burrows, wet areas, or erosion of the fill are present. Trees and shrubs should be kept off the embankment and emergency spillway areas.</p> <p>The vegetation should be mowed once per year to discourage woody growth. Vegetation should be managed without the aid of fertilizers.</p> <p>Inspect vegetation for invasive species annually and remove if present. Supplement wetland plants if <50% surface is bare. Harvest wetland plants that have been "choked out" by sediment buildup.</p> <p>Pipe inlets and outlets should be inspected annually and after major storm events.</p> <p>Sediment should be continually checked in the basin and removed as necessary.</p> <p>The structure should be inspected by a qualified professional on a periodic basis.</p>

**NOTE: Source of information for Constructed Wetlands is USEPA manual of BMPs.*

3.4 CONSTRUCTION ACTIVITIES AND OTHER LAND DISTURBANCES

As Storm Water Management Authority, Inc's municipalities perform construction activities and other activities which disturb soil, they take precautions to prevent erosion and runoff of sediment. Road crews and landscaping crews are being trained in erosion and sediment control methods. JCDH is creating publications and training sessions that describe a variety of methods that can be used to reduce the long term impact of sedimentation and erosion on water quality. The material for each municipality should be available by June 2011 and in video form sometime thereafter. Each municipality will then be responsible for making sure any new hires are trained using the video material as well as a refresher course is offered for each existing employee on an annual basis. Erosion and Sedimentation Control SOPs are listed in Appendix C.

4. GLOSSARY OF ACRONYMS

ADEM	Alabama Department of Environmental Management
AST	Aboveground Storage Tank
AU	Assessment Unit
BMP	Best Management Practice
CWP	Center for Watershed Protection
GASB	General Accounting Standards Board
GIS	Geographic Information System
GPS	Geographic Positioning System
HUC	Hydrologic Unit Code
JCDH	Jefferson County Department of Health
IDDE	Illicit Discharge Detection and Elimination
IDP	Illicit Discharge Potential
MEP	Maximum Extent Practical
MCM	Minimum Control Measure
MSDS	Material Safety Data Sheet
MSGP	Multi Sector General Permit
MS4	Municipal Separate Storm Sewer System
NEIWPC	New England Interstate Water Pollution Control Commission

NOV	Notice of Violation
NPDES	National Pollutant Discharge Elimination System
NRCS	National Resource Conservation Service
OBM	Optical Brightener Monitoring
PAHs	Polycyclic Aromatic Hydrocarbons

APPENDIX A

ILLICIT DISCHARGE DETECTION AND ELIMINATION SOPS AND FORMS

TYPICAL GPS SCREEN EXPLANATION

The screenshot shows the TerraSync application interface on a handheld device. The interface includes a top status bar with the time 10:11 and various icons. Below the status bar are several menu options: 'Data', 'Collect', 'Options', and 'Close'. A 'Create' button is visible next to the 'Options' menu. The main screen displays a 'File: JUNO071410A' and a 'Choose Feature:' section with a list of feature types. A 'Create' button is also present next to the 'Choose Feature:' label. The bottom of the screen shows a 'Create' button and a small logo.

Data Option allows for Mapping, Data Retrieval, Status and Setup

Number of Satellites currently reading- JCDH recommends at least 4 but optimal 6

Battery Life

Amount of Error in ft before post - processing

Normally a bullseye for number of points logged- JCDH recommends at Least 30 points taken

Data Logger Start Button

Create Dataset Button

Type of Inventory

Collection Sites of Interest each has a separate dictionary and are updated with new options

Type	Feature Name
<input checked="" type="checkbox"/>	CLOSED PIPE
<input type="checkbox"/>	OPEN CHANNEL
<input type="checkbox"/>	TRIBUTARY
<input type="checkbox"/>	SITE OF INTEREST
<input type="checkbox"/>	Point_generic
<input type="checkbox"/>	Line_generic
<input type="checkbox"/>	Area_generic

Standard Operating Procedure for:	
A.1 IDDE: Inspections During Mapping (JCDH Employees)	
Purpose of SOP:	This SOP provides a basic checklist for JCDH employees conducting illicit discharge inspections during mapping.

Always:

- 1) Characterize the outfall by recording information on the Tremble Nomad Unit data dictionary such as:
 - Side of creek
 - GPS location (at least 30 points to post process)
 - Flow present
 - Flow description
 - Material of pipe
 - Shape
 - Diameter, horizontal distance, vertical distance
 - Number of pipes
 - Submerged pipe
 - Sediment filled
 - pH
 - temperature
 - picture of all pipes
- 2) Conduct inspections during dry weather periods using the Dry Weather Outfall Inspection Form or data dictionary shown on the next page if a problem outfall is believed to be discovered
- 3) Follow procedure below if an illicit discharge is encountered (such as raw sewage, paint, etc.).
- 4) Conduct inspections with at least two JCDH employees per crew.
- 5) Carry a list of emergency phone numbers. (All JCDH inspectors are equipped with cell phones)
- 6) Have on JCDH badge at all times

Whenever Possible:

- 1) Conduct inspections during low groundwater and leaf off conditions.
- 2) Identify and label the outfall with a unique identifier if outfall is believed to be a problem.
- 3) If dry weather flow is present at the outfall, and the flow **does not** appear to be an illicit discharge attempt to identify the source of the flow (intermittent stream etc.), then document the discharge for future comparison.
- 4) Collect samples of flowing discharges before and after source removal.

Never:

- 1) Never put yourself in danger.
- 2) Never enter private property without permission

Figure 1: Tremble Nomad Unit

Dry Weather Discharge

The CWP defines **dry weather** as a 48 hour period with no runoff-producing rainfall. JCDH prefers the period to be 72 hours but if continual rain occurs that will be switched to 48 hours as needed.

Equipment list for mapping:

1. Entrance and Exit Point Map
2. GPS unit with built in camera
3. Field sheets for any illicit discharge found (can be left in truck)
4. Cell phones
5. pH meter
6. First aid kit
7. Flash light or head lamp
8. Surgical gloves
9. Tape measure
10. Temperature probe
11. Waders
12. Watch with a second hand
13. Hand sanitizer
14. Sampling pole
15. Safety vests

JCDH Procedure for illicit discharge detection

- Call supervisor and notify of location
- Take photos and record under Site of Interest in data dictionary on GPS unit as shown below
- Supervisor carries out sample bottles to be taken to lab for a rush sample
- Area is then visually inspected for the possible sources.
- If no source can be identified then wait for sample results to come back to see what possible contaminants are. At this point a further investigation will be launched. This can include but is not limited to 24 hour ISCO sampling, damming, etc.

Dry Weather Outfall Inspection Form

Location Information

Date: _____ **Inspector:** _____
Time: _____
Outfall ID: _____
Outfall Location: _____
Receiving Waterbody: _____
Photo Taken: Yes No **Photo ID:** _____

Weather: Clear Cloudy **Approximate Temp:** _____ **Wind Present:** Yes No
Precipitation in the past 3 days: No Yes _____ inches

Pipe Flow: None Trickle Steady 1/4 pipe flow or more
Seepage Flow: None Trickle Steady 1/4 pipe flow or more
Color (if flow is present): _____

Inspection Information *Select all that are applicable*

Obvious Debris/Pollution:	0	3	5	8	9	9	10	Odor:	0	5	10	10	Water Clarity:	0	5	10
None								None/Natural					Clear			
Foam								Musty					Cloudy			
Staining								Sewage/septic								
Floating Green Scum								Petroleum					Opaque			
Oil / Film

Sewage Solids																
TOTAL								TOTAL					TOTAL			

GRAND TOTAL SCORE =

Additional Information

Sediment Condition: Open 1/4 Full 1/2 Full 3/4 Full Plugged
Structure Condition: Excellent Good Fair Poor
Trash/litter present: Yes No **Yard waste observed:** Yes No
General Comments: _____

Potential Sources / Actions Taken:

Sample collected? Yes No
 By whom? _____
Follow up required: Yes No

Parameters: Results:

Be sure to staple all relevant lab tests and assigned GPS points and photos to sheet during investigation.

NOTE: This information is to accompany the Dry Weather Outfall Inspection Form.

Odor – Most strong odors, especially gasoline, oils, and solvents are likely associated with high responses on the toxicity screening test.

Stale sanitary wastewater: sewage

Detergent, perfume: Laundromat or household laundry

Sulfur ("rotten eggs"): industries that discharge sulfide compounds or organics (meat packers, canneries, dairies)

Oil and gas: facilities associated with vehicle maintenance or petroleum product storage (gas stations) or petroleum refineries

Rancid-sour: food preparation facilities (restaurants, hotels)

Color – Important indicator of inappropriate industrial sources. Dark colors, such as brown, gray, or black are the most common.

Yellow: chemical plants, textile, and tanning plants

Brown: meat packers, printing plants, metal works, stone and concrete, fertilizers, and petroleum refining facilities [note: can be from natural organic acids if a wetland is upstream]

Green: chemical plants, textile facilities

Red: meat packers [note: can be from organic acids if a wetland is upstream]

Gray: dairies

Turbidity – The cloudy appearance of water caused by the presence of suspended or colloidal matter. In dry weather, high turbidity is often a characteristic of undiluted industrial discharges.

Cloudy: sanitary wastewater, concrete or stone operations, fertilizer facilities, automotive dealers

Opaque: food processors, lumber mills, metal operations, pigment plants

Floatable matter – a contaminated flow may contain floating solids or liquids directly related to industrial or sanitary wastewater pollution. Floatables of industrial origin may include animal fats, spoiled food, oils, solvents, sawdust, foams, packing materials, or fuel.

Oil sheen: petroleum refiners or storage facilities and vehicle service facilities. [note: there is a type of bacteria that looks like an oil sheen. If you take a stick and swirl around the sheen, it will break up into blocky pieces if it is the bacteria. A true oil sheen will quickly re-form and not look blocky.]

Toilet paper bits, fecal bits, food particles: sanitary wastewater

Soap suds: if white or a clear sheen, laundry discharge (check odor) [note: can also occur from natural surfactants; usually off-white or tan with an earthy-fishy odor.]

Deposits and Stains – Any type of coating near the outfall, usually a dark color. Deposits and stains will often contain fragments of floatable substances.

Lots of sediment: construction site erosion, sand and gravel pits, winter road applications

Oil stain: petroleum storage, vehicle service facilities, petroleum refineries

Rusty: precipitates from iron-rich water (natural or industrial) [note: if slimy and clumpy, it could be iron bacteria]

Grayish-black deposits and hair: leather tanneries

White crystalline powder: nitrogenous fertilizer waste

Vegetation – Vegetation surrounding an outfall may show the effects of industrial pollutants. Decaying organic materials coming from various food product wastes would cause an increase in plant life, while the discharge of chemical dyes and inorganic pigments from textile mills could noticeably decrease vegetation. It is important not to confuse the adverse effects on high Storm Water flows on vegetation with highly toxic dry-weather intermittent flows.

Excessive growth: food product facilities, fertilizer runoff (lawns, golf courses, and farms)

Inhibited growth: high Storm Water flows, beverage facilities, printing plants, metal product facilities, drug manufacturing, petroleum facilities, vehicle service facilities, and automobile dealers

Damage to Outfall Structures – Outfall damage can be caused by severely contaminated discharges that are very acidic or basic in nature. Primary metal industries have a strong potential to cause outfall structure damage because their batch dumps are highly acidic. Poor construction, hydraulic scour, and old age can also negatively affect the condition of all outfall structure.

Concrete or spalling (breaking off into chips or layers): industrial flows

Peeling paint: industrial flows

Metal corrosion: industrial flows

This sheet was courtesy of the NHDES (modified from Pitt et al., 1993 Investigation of Inappropriate Pollutant Entries into Storm Drainage Systems: a User's Guide. EPA Office of research and Development, EPA/600/R-92/238).

Data Dictionary Screen Shots Typical Example

The data dictionary is used on the GPS units to allow for easy waterproof form carrying. The options can be changed and the screen shots presented are just a sample of what JCDH is using currently. This helps to keep the paper forms like the ones above strictly for documentation purposes.

Site of Interest for logging Illicit or Suspicious Discharges

Standard Operating Procedure for:	
A.2 IDDE: Long-Term Inspections –Dry Weather (JCDH Employees)	
Purpose of SOP:	To provide supervisor and field crew with a punch list of things to remember during regularly scheduled inspections.

Always:

- 1) Conduct inspections during dry weather periods (48-72 hours after rain event).
- 2) Check the outfall's dimensions, shape, and component material using the GPS data dictionary with the existing site name in the data dictionary
- 3) Characterize and record observations on basic sensory and physical indicators (e.g., odor, color, oil sheen).
- 4) If an illicit discharge is encountered (such as raw sewage, paint, etc.), follow the procedure below.
- 5) Perform inspections so as to meet JCDH's goal of inspecting each outfall within the 5 year permit cycle (long term).
- 6) Take pictures in the data dictionary for later inspections and GIS maps.
- 7) Always have on JCDH badge when doing inspections

Whenever Possible:

- 1) Identify and label the outfall with a unique identifier. For example "SWO-013".
- 2) If dry weather flow is present at the outfall, and the flow does not appear to be an obvious illicit discharge (e.g., flow is clear, odorless, etc.), attempt to identify the source of the flow (intermittent stream, etc.) then document the discharge for future comparison.
- 3) Collect samples before and after source removal.

Never:

- 1) Never put yourself in danger.
- 2) Never enter private property without permission.

JCDH Procedure for illicit discharge detection

- Call supervisor and notify of location
- Take photos and record under Site of Interest in data dictionary on GPS unit as shown below
- Supervisor carry out sample bottles to be taken to lab for a rush sample
- Area is then visually inspected for the possible sources.
- If no source can be identified, wait for sample results to provide information on possible contaminants. At this point a further investigation will be launched. This can include but is not limited to 24 hour ISCO sampling, damming, etc.

Standard Operating Procedure for:	
A.2 IDDE: Long-Term Inspections –Wet Weather (JCDH Employees)	
Purpose of SOP:	To provide supervisor and field crew with a punch list of things to remember during regularly scheduled inspections.

Always:

- 8) Conduct inspections during flow events, or as close to a rain event as possible. (no longer than 6 hours)
- 9) Check the outfall's dimensions, shape, and component material using the GPS data dictionary with the existing site name in the data dictionary
- 10) Characterize and record observations on basic sensory and physical indicators (e.g., odor, color, oil sheen).
- 11) If an illicit discharge is encountered (such as raw sewage, paint, etc.), follow the procedure below.
- 12) Perform inspections so as to meet JCDH's goal of inspecting each outfall within the 5 year permit cycle (long term).
- 13) Take pictures in the data dictionary for later inspections and GIS maps.
- 14) Always have on JCDH badge when doing inspections

Whenever Possible:

- 4) Identify and label the outfall with a unique identifier. For example "SWO-013".
- 5) Collect samples before and after source removal.

Never:

- 3) Never put yourself in danger.
- 4) Never enter private property without permission.

JCDH Procedure for illicit discharge detection

- Call supervisor and notify of location
- Take photos and record under Site of Interest in data dictionary on GPS unit as shown below
- Supervisor carry out sample bottles to be taken to lab for a rush sample
- Area is then visually inspected for the possible sources.
- If no source can be identified, wait for sample results to provide information on possible contaminants. At this point a further investigation will be launched. This can include but is not limited to 24 hour ISCO sampling, damming, etc.

Standard Operating Procedure for:	
A.3 IDDE: Opportunistic Inspections (Non JCDH Employees)	
Purpose of SOP:	This SOP provides city field personnel with a quick checklist of proper procedures to follow if they observe illicit discharges while conducting their regular duties.

Always:

- 1) Call dispatcher, supervisor, or JCDH official if you see evidence of an illicit discharge. (If not a JCDH employee). If JCDH employee notify supervisor or follow illicit discharge procedure.
- 2) Assess the general area of the illicit discharge to see if you can identify its' source.

Whenever Possible:

- 1) Use the Incident Tracking Sheet to document observations.
- 2) Take photographs of the illicit discharge.
- 3) Get Supervisor to fill out Illicit Discharge Form.
- 4) Use the Catch Basin Cleaning Form to document observations during cleaning.

Never:

- 1) Never enter private property without permission.
- 2) Never put yourself in danger.

Standard Operating Procedure for:	
A.4 IDDE: Citizen Call-in Inspections (JCDH Employees and Municipal Officials)	
Purpose of SOP:	To collect appropriate information from a citizen reporting a potential illicit discharge to increase the chances of identifying and removing its source.

Always:

- 1) Use the JCDH complaint system and call in line at (205)930-1230. The Incident Tracking Sheet below can provide an additional document to collect the appropriate information that then should be entered into JCDH complaint system
- 2) Investigations should be worked with in 5-7 business days and the status should be reported on the complaint system.
- 3) All action taken should be recorded.
- 4) Follow JCDH procedures on complaints for any additional information
- 5) All municipal employees should call in the complaint to JCDH at (205)930-1230 for tracking purposes

Whenever Possible:

- 1) Provide additional training on tracking stormwater complaints
- 2) Generate GIS databases from information taken from complaints to scan for any patterns of illicit discharges

Never:

- 1) Never enter private property without permission.
- 2) Never put yourself in danger.

ILLICIT DISCHARGE HOTLINE INCIDENT TRACKING SHEET

Copied with permission from: *Illicit Discharge Detection and Elimination-A Guidance Manual for Program Development and Technical Assessments*, CWP, 2004.

Incident ID:				
Responder Information				
Call taken by:			Call date:	
Call time:			Precipitation (inches) in past 24-48 hrs:	
Reporter Information				
Incident time:			Incident date:	
Caller contact information (<i>optional</i>):				
Incident Location (<i>complete one or more below</i>)				
Latitude and longitude: Or other coordinate system				
Stream address or outfall #:				
Closest street address:				
Nearby landmark:				
Primary Location Description		Secondary Location Description:		
Stream corridor (<i>In or adjacent to stream</i>)		Outfall	In-stream flow	Along banks
Upland area (<i>Land not adjacent to stream</i>)		Near storm drain	Near other water source (storm water pond, wetland, etc.):	
Narrative description of location:				
Upland Problem Indicator Description				
Dumping		Oil/solvents/chemicals	Sewage	
Wash water, suds, etc.		Other: _____		
Stream Corridor Problem Indicator Description				
Odor	None	Sewage	Rancid/Sour	Petroleum (gas)
	Sulfide (rotten eggs); natural gas	Other: Describe in "Narrative" section		
Appearance	"Normal"	Oil sheen	Cloudy	Suds
	Other: Describe in "Narrative" section			
Floatables	None:	Sewage (toilet paper, etc)	Algae	Dead fish
	Other: Describe in "Narrative" section			
Narrative description of problem indicators:				
Suspected Violator (name, personal or vehicle description, license plate #, address, etc.):				

Standard Operating Procedure for:	
A.5 IDDE: Septic System Inspections (JCDH Employees and Municipal Employees)	
Purpose of SOP:	Failed septic systems can adversely impact water quality. This SOP provides a quick reference list to supervisors and field crews that are conducting an initial screening for failures in areas that are identified in the full IDDE program.

Always:

- 1) Refer potential septic tank issues to JCDH (205)903-1230 if a municipal employee.
- 2) JCDH refer all septic tank issues to Community Environmental Protection Division. They will follow internal procedures to have all issues resolved. Monitor to make sure work is being completed.
- 3) Inform homeowner that they have a leak and that action needs to be taken to remediate the problem such as tank pumping until problem can be resolved

Whenever Possible:

- 1) Screen high risk areas (older areas or areas near lakes or impaired waterbodies). JCDH keeps a record of all septic tank malfunctions and what areas are more likely for malfunctions
- 2) Look for indicators of failures, such as wet areas or disagreeable odors near the leach field.
- 3) JCDH documents all septic tank systems as they are installed and what repairs are issued.

Never:

- 1) Never enter private property without permission.
- 2) Never put yourself in danger.

Standard Operating Procedure for:	
A.6 IDDE: Tracing Illicit Discharges (JCDH Employees)	
Purpose of SOP:	To provide a quick reference list of items to keep in mind during tracing activities to efficiently and systematically identify the source of an illicit discharge.

Always:

- 1) Review / consider information collected when illicit discharge was initially identified (Incident Tracking Sheet from municipality, Data Dictionary from JCDH, or Dry Weather Outfall Inspection Form can all be used for this purpose).
- 2) Survey the general area / surrounding properties to identify potential sources of the illicit discharge as a first step. If discharge is fecal or similar JCDH takes enforcement action immediately and then educates homeowner using pamphlets, flyers, or talks to communities about ways to eliminate these issues.
- 3) JCDH traces illicit discharges using visual inspections of upstream points as a secondary step.
- 4) JCDH documents tracing results for future reference.
- 5) JCDH uses analysis software to tell if there are illicit discharges between set sample points and then uses personnel to track these discharges

Whenever Possible:

- 1) JCDH can employ the use of weirs, sandbags, dams, or optical brightener monitoring traps to collect or pool intermittent discharges during dry weather for further inspection.
- 2) Although rarely used by JCDH, televising of the storm drain system can be used trace high priority, difficult to detect illicit discharges.
- 3) JCDH dye tests, with a fluorescent green dye, the individual discharge points within suspected buildings.
- 4) If the source cannot be found, it is added to the area GIS database for future inspection programs.
- 5) Samples are always taken by JCDH usually in pairs to confirm/refute illicit discharge.

Never:

- 1) Never enter private property without permission.
- 2) Never put yourself in danger.

Standard Operating Procedure for:	
A.7 IDDE: Removing Illicit Discharges (JCDH and Municipal Employees)	
Purpose of SOP:	Proper removal of an illicit discharge will ensure it does not recur. Using legal methods for the removal will minimize the municipality's liability. This SOP provides an overview of illicit discharge removal procedures.

Always:

- 1) Determine who is financially responsible; and follow associated procedures on Table 2-9.
- 2) Suspend access to storm drain if threats of death or serious physical harm to humans or the environment are possible.
- 3) If the discharge is from an exempt facility (see Table 2-9) notify the facility operator and the appropriate enforcement authority.
- 4) Repair/correct cause of discharge if municipality is responsible.
- 5) Collect a confirmatory sample after the removal. Seek technical assistance from JCDH, if needed.
- 6) Seek fining methods through the *Erosion and Sedimentation Control Ordinance* or through municipal codes. Each day of discharge will constitute a separate offense.
- 7) Work with guilty party to solve issue as much as possible.

Whenever Possible:

- 1) Issue a Notice of Violation for violations of the *Erosion and Sedimentation Control Ordinance* adopted by all Storm Water Management Authority, Inc municipalities.

Never:

- 1) Never repair/correct cause of discharge on private property until all organizations have met and decided what is the best course of action (JCDH Storm Water program, Mayor, City Official, etc.)

TABLE 2-9: NOTIFICATION AND REMOVAL PROCEDURES FOR ILLICIT DISCHARGES INTO THE MUNICIPAL SEPARATE STORM SEWER SYSTEM			
Financially Responsible Party	Source Identified	Enforcement Authority	Procedure to Follow
Private Property Owner	One-time illicit discharge (e.g., spill, dumping, etc.)	Ordinance enforcement authority (Municipal Official, JCDH)	<ul style="list-style-type: none"> • Contact Owner • Issue Notice of Violation • Issue fine
Private Property Owner	Intermittent or continuous illicit discharge from legal connection	Ordinance enforcement authority (Municipal Official, JCDH)	<ul style="list-style-type: none"> • Contact Owner • Issue Notice of Violation • Determine schedule for removal • Confirm removal
Private Property Owner	Intermittent or continuous illicit discharge from illegal connection or indirect (e.g., infiltration or failed septic)	Plumbing Inspector, Municipal Official, JCDH	<ul style="list-style-type: none"> • Notify plumbing inspector
Municipal	Intermittent or continuous illicit discharge from illegal connection or indirect (e.g., failed sewer line)	Ordinance enforcement authority (JCDH, Municipal Official, Jefferson County Environmental Services)	<ul style="list-style-type: none"> • Issue work order • Schedule removal • Remove connection • Confirm removal
Exempt 3 rd Party <ul style="list-style-type: none"> • Alabama Department of Transportation ALDOT (in selected urbanized areas) • Industrial Facilities with selected SIC codes 	Any	USEPA	<ul style="list-style-type: none"> • Notify exempt third party and USEPA of illicit discharge

Standard Operating Procedure for:	
A.8 IDDE: Removing Industrial Illicit Discharges (JCDH and Municipal Employees)	
Purpose of SOP:	Proper removal of an industrial illicit discharge will ensure it does not recur. Using legal methods for the removal will minimize the municipality's liability. This SOP provides an overview of industrial illicit discharge removal procedures.

Always:

- 1) Determine who is financially responsible; and follow associated procedures on Table 2-9.
- 2) Suspend access to storm drain if threats of death or serious physical harm to humans or the environment are possible.
- 3) If the discharge is from an exempt facility (see Table 2-9) notify the facility operator and the appropriate enforcement authority.
- 4) Repair/correct cause of discharge if industrial discharge is from a municipal source
- 5) Collect a confirmatory sample after the removal. Seek technical assistance from JCDH, if needed.
- 6) Seek fining methods through the *Erosion and Sedimentation Control Ordinance* or through municipal codes. Each day of discharge will constitute a separate offense. These offenses may be subject to escalated fees according to municipal or other ordinances.
- 7) Work with guilty party to solve issue as much as possible. Use environmental engineer for facility when possible, these have been identified from the existing Air Toxins program at JCDH

Whenever Possible:

- 1) Issue a Notice of Violation for violations of the *Erosion and Sedimentation Control Ordinance* adopted by all Storm Water Management Authority, Inc municipalities.
- 2) GIS locate all NPDES discharge sites for all industrial sources within the Storm Water Management Authority, Inc municipalities.
- 3) Work with ADEM to check all NPDES permit limits to make sure industrial sources are within allowed limits

Never:

- 1) Never repair/correct cause of discharge on private property until all organizations have met and decided what is the best course of action (JCDH Storm Water program, Mayor, City Official, etc.)

APPENDIX B

POLLUTION PREVENTION AND GOOD HOUSEKEEPING SOPS

Standard Operating Procedure for:	
B.1 Catch Basin Cleaning (Municipal or Jefferson County Public Works Employees)	
Purpose of SOP:	To protect Storm Water by maintaining the ability of catch basins to trap sediments, organic matter, and litter. This reduces clogging in the storm drain system as well as the transport of sediments and pollutants into receiving waterbodies.

Always:

- 1) Inspect catch basins for structural integrity and evidence of illicit discharges during cleaning. Use the Catch Basin Cleaning Form.
- 2) If gross contamination (sewage or oil), stop cleaning and report to supervisor for follow up. The supervisor should then report this to JCDH at (205)930-1230.
- 3) Stockpile and cover catch basin residuals on an impervious surface that discharges to a sanitary sewer or buffered area until test results are known (if reuse is planned).
- 4) Test catch basin stockpile as follows:
 - If obviously (by visual and/or olfactory examination) contaminated with sanitary wastewater, animal wastes, oil, gasoline or other petroleum products, test the solids pursuant to the hazardous waste determination dispose of as follows:
 - a) If non-hazardous – dispose at any permitted, lined solid waste landfill or other solid waste treatment facility permitted to accept this material.
 - b) If hazardous – dispose of in accordance with Alabama Hazardous Waste Rules.
 - If not obviously contaminated,
 - a) Test for metals, VOCs and PAHs.
 - b) Compare with the following charts used by New Hampshire or relevant Alabama used charts.

Whenever Possible:

- 1) Inspect each catch basin at least annually, during catch basin cleaning. These forms will need to be reported to JCDH for record keeping unless the municipality has a record keeping process in place.
- 2) Create an internal checklist for catch basins to help classify which catch basins require maintenance and how often.
- 3) Perform street sweeping on an appropriate schedule to reduce the amount of sediment, debris and organic matter entering the catch basins, which in turn reduces the frequency with which they will need to be cleaned. The street sweeping schedules should be provided to JCDH or Storm Water Management Authority, Inc and tracked on a monthly basis by each municipality
- 4) Discharge fluids collected during catch basin cleaning to a sanitary WWTP, or buffered detention area.
- 5) The forms listed below should be completed and turned into JCDH on a monthly basis. This allows for miles of street swept and number of catch basins cleaned each year.

Catch Basin Cleanings Reuse Guidance			
Maximum Contaminant Concentrations			
<i>Regulated Contaminant</i>	<i>S-1 Standards (mg/kg)</i>	<i>S-3 Standards (mg/kg)</i>	<i>USEPA SW-846 Test Method</i>

Standard Operating Procedure for:	
B.2 Storm Drain System Repair and Maintenance (Municipal or Jefferson County Public Works Employees)	
Purpose of SOP:	To protect Storm Water by replacing or repairing components of the storm drain system on a regular basis to prevent a failure of the storm drain system.

Always:

- 1) Practice preventive maintenance for cracks, leaks, and other conditions that could cause breakdowns in the system by identifying maintenance issues such as:
 - For catch basins during catch basin cleaning (see SOP B.1)
 - For outfalls during IDDE inspection (see SOP A.1, A.2 and A.3)
- 2) Repair defective structures or equipment identified during an inspection as soon as possible.
- 3) Test and dispose of stockpiled materials as described in SOP B.1.
- 4) Document inspections, cleanings and repairs and report them to Storm Water Management Authority, Inc or JCDH (SOP B.1 for catch basins, SOPs A.1 through A.3 for outfalls, and attached example form for pipes).
- 5) Use appropriate erosion and sediment control practices when performing repairs.

Whenever Possible:

- 1) Practice preventive maintenance for pipes by televising:
 - Prior to reconstruction of roadways, or
 - On a regular schedule beginning with high priority areas.
 - Or track all televising of sewer lines by Jefferson County Environmental Services.
- 2) Research and implement new technology that will improve the overall performance of the storm drain system.
- 3) Perform street sweeping on a regular basis to reduce the amount of sediment, debris and organic matter entering the storm drain system, which in turn reduces the frequency with which the system will need to be cleaned. This activity will need to be tracked and presented to Stormwater Management Authority or JCDH on a monthly basis.
- 4) Use documentation of repairs and maintenance to develop a capital improvement and O&M plan for future system maintenance. This should be written in an overall city document plan.

Never:

- 1) Never allow defective equipment or structures to go unrepaired.

Related References	
	-USEPA National Menu of BMPS -Alabama Soil and Conservation Committee’s <i>Alabama Handbook for Erosion Control, Sediment Control, and Stormwater Management of Construction Sites and Urban Areas</i>

B.3 Erosion and Sediment Control (All Organizations)	
Purpose of SOP:	To protect Storm Water from pollution by reducing or eliminating pollutant loading from land disturbing activities.

Always:

- 1) Use erosion control techniques or devices to stabilize disturbed areas.
- 2) Use effective site planning to avoid sensitive areas.
- 3) Keep land disturbance to a minimum.
- 4) Inspect and maintain erosion control devices after each 0.75 inches of rain
- 5) Install erosion control devices properly.
- 6) Remove sediment accumulated during construction from permanent BMPs once construction is completed.
- 7) Minimize the amount of bare soil by scheduling phases of construction and stabilization.
- 8) Minimize slope lengths.
- 9) Monitor practices and adjust, maintain, and repair them periodically and after every storm.
- 10) Reduce the velocity of Storm Water runoff.
- 11) Prevent erosion by covering bare soil with mulch or other cover.
- 12) Protect existing Storm Water structures from sediment by using temporary sediment traps, silt fence, or perforated risers.
- 13) Divert clean water around construction site.
- 14) Make sure all permitting has been done and approved through JCDH and the local Stormwater Management Authority municipality. See form on next page for electronic permit.
- 15) Allow 3-14 business days for initial review time on large commercial developments.

Whenever Possible:

- 1) Limit construction activities during months with higher runoff rates.
- 2) Install erosion control blankets when seeding drainage ways.
- 3) Protect natural vegetation, especially near waterbodies, wetlands, and steep slopes.
- 4) Establish vegetative cover with good root systems prior to freeze/thaw cycles.

Never:

- 1) Never divert runoff into a sensitive area.
- 2) Never remove temporary measures before construction is complete.
- 3) Never allow silt fences to over-run or put in flow paths.

Standard Operating Procedure for:	
B.4 Landscape Design and Management (All Organizations)	
Purpose of SOP:	To protect Storm Water by designing and managing landscaping in ways that minimize polluted runoff.

Always:

- 1) Design landscaping by taking into account soil types, light, drainage, desired maintenance level and budget. A soil map is attached on the following page of Jefferson County but for further soil information go to <http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx>.
- 2) Design for ease of maintenance.

Whenever Possible:

- 1) Minimize erosion prone steep slopes by using techniques such as terracing.
- 2) Use native plants that are pest resistant. Plant the right plant in the right area.
- 3) Manage water runoff by rerouting gutters away from storm drains and maintaining groundcovers between developed areas and waterways (ditches, swales, shorelines).
- 4) Reduce or eliminate mown lawn in unused areas.
- 5) Convert excess lawn to meadow or forest.
- 6) Establish set back distances from pavement, storm drains, and waterbodies. Allow these areas to serve as buffers with disease-resistant plants and minimal mowing.
- 7) JCDH and the Stormwater Municipalities promote Low Impact Development Design on new structures and retrofits.

Never:

- 1) Never develop a landscape design without assessing its impact on water quality.
- 2) Never cause unintended consequences such as
 - Planting large variety trees beneath overhead wires.
 - Blocking site distance at intersections
 - Planting trees with a high water demand (weeping willow) near sanitary sewer pipes and storm sewer pipes.

Standard Operating Procedure for:	
B.5 Storage and Disposal of Fertilizer and Pesticides (Municipal Employees, Jefferson County Employees, and Homeowners)	
Purpose of SOP:	To protect Storm Water by properly storing and disposing of fertilizers and pesticides (herbicides and fungicides). Because storm drain water is not part of a wastewater treatment system, discharge of these chemicals flows untreated into ponds, lakes, rivers, streams, estuaries, and bays.

Always:

- 1) Store fertilizers and pesticides in high, dry locations, according to manufacturer’s specifications and applicable regulations.
- 2) Fill out PHF storage form below.
- 3) Clearly label secondary containers.
- 4) Properly dispose of fertilizers and pesticides according to manufacturer’s specifications and applicable regulations.
- 5) Regularly inspect fertilizer and pesticide storage areas for leaks or spills.
- 6) Clean up spills and leaks of pesticides and fertilizers to prevent the chemicals from reaching the storm drain system. (SOPs B.12 and B.16)

Whenever Possible:

- 1) Store pesticides in enclosed areas or in covered impervious containment, preferably in a locked cabinet.
- 2) Order fertilizers and pesticides for delivery as close to time of use as possible to reduce amount stored at facility.
- 3) Order only the amount needed to minimize excess or obsolete materials requiring storage and disposal.
- 4) Use ALL herbicides or pesticides appropriately to minimize the amount of chemicals requiring disposal.
- 5) Do an annual review of storage area and dispose of old, unusable or “obsolete” fertilizer or pesticides in accordance with applicable regulations (just before your local Household Hazardous Waste Day).
- 6) Keep a eye out for local recycling centers that will be marked by a JCDH program that is targeted for October 2011.

EPA defines a pesticide as any substance intended for preventing, destroying, repelling, or mitigating any pest. Pest can include insects, animals, unwanted plants, fungi, bacteria, etc. The term applies to insecticides, herbicides, fungicides, etc.

Never:

- 1) Never dispose of fertilizers or pesticides in storm drains.
- 2) Never leave unlabeled or unstable chemicals in uncontrolled locations.

Standard Operating Procedure for:	
B.6 Fertilizing and Turf Health Application (Municipal Employees, Jefferson County Employees, and Homeowners)	
Purpose of SOP:	To protect Storm Water by properly storing, applying, and disposing of fertilizers and by maintaining turf health to reduce diseases.

Always:

- 1) Store, use, and dispose of all fertilizers and contaminated wastes according to manufacturer's specifications and applicable regulations.
- 2) Choose seed based on soil types, intended use of area, latest variety research, and/or assessment of past site performance.
- 3) Check 5-day weather forecast to avoid fertilizing before heavy rain or during a drought.
- 4) Fill out appropriate form below.

Whenever Possible:

- 1) Apply fertilizers based on a soil testing program, soil type, turf function, and assessment by qualified personnel (conservation commission or municipal arborist, etc.). See Jefferson County Soil Map above.
- 2) Avoid fertilizing during a drought or when the soil is dry.
- 3) Apply fertilizers during periods of maximum plant uptake (usually fall and spring).
- 4) Avoid combined products such as weed and feed, which do not necessarily target specific problems at the appropriate time.
- 5) Calibrate application equipment to ensure proper application.
- 6) If phosphorus fertilizer is used when re-seeding, mix phosphorus into root- zone.
- 7) Use alternative or environmentally friendly products (See SOP B.15.).
- 8) Use natural compost and organic fertilizers instead of synthetic fertilizers.
- 9) Aerate grassed areas to improve drainage and bring more oxygen to the soil.

Never:

- 1) Never fertilize before a forecasted heavy rainfall.
- 2) Never apply phosphorus fertilizer on bare soil.
- 3) Never deposit fertilizer in the water, into storm drains, or onto impervious surfaces (streets and sidewalks).
- 4) Never apply fertilizer to frozen ground.
- 5) Never clean up spilled fertilizer by rinsing it with water.

Standard Operating Procedure for:	
B.7 Weed and Pest Control Application (Municipal Employees, Jefferson County Employees, and Homeowners)	
Purpose of SOP:	To protect Storm Water by properly applying pesticides (herbicides and insecticides).

Always:

- 1) Ensure that pesticides are only applied by personnel certified by AL Department of Agriculture to do so.
- 2) Apply pesticides according to manufacturer’s specifications, the Alabama Department of Agriculture & Industrial Food & Safety Division, Pesticide Management Section, and any local requirements.
- 3) Clean up any spilled chemicals (See SOPs B.12 and B.16.).
- 4) Use pesticides only when necessary.
- 5) Rinse equipment only when necessary and use rinse water to dilute next mix as long as application rates are not exceeded.

Whenever Possible:

- 1) Use alternative methods to control weeds and pests such as Integrated Pest Management strategies, biorational insecticides (natural soaps and oils) or biological controls. (See SOP B.15.)
- 2) Mix/load pesticides in an area where spills can be contained.
- 3) Pull weeds by hand or mechanically.
- 4) Spot treat affected areas only instead of entire location.
- 5) Apply pest control at the life stage when the pest is most vulnerable.
- 6) Choose the least toxic pesticides that still achieve results.
- 7) Tolerate low levels of weeds.
- 8) Allow grass to grow 2.5 to 3 inches high, reduce thatch build up and aerate soils.
- 9) Reduce seed release of weeds by timing cutting at seed set.

Never:

- 1) Never mix or prepare pesticides near storm drains.
- 2) Never apply controlled pesticides unless certified to do so.
- 3) Never apply pesticides before a heavy rainfall.
- 4) Never discharge rinse water or excess chemicals to storm drain, sewer, or ground surface.

Standard Operating Procedure for:	
B.8 Mowing and Irrigation (Municipal Employees, Jefferson County Employees, and Homeowners)	
Purpose of SOP:	To protect Storm Water by using proper mowing and watering techniques. Proper mowing and irrigation techniques will reduce organic matter and other pollutants from entering the storm drain system and waterbodies.

Always:

- 1) Mow only as low as needed for the area’s intended use.
- 2) Vary mowing pattern to minimize ruts and promote even growth.
- 3) Base irrigation amounts on monitoring for moisture content.
- 4) Water at appropriate times (when no rain is forecasted and in cooler times of day).
- 5) Manage leaves, clippings, and compost so that runoff does not enter storm drain system or waterbodies.

Whenever Possible:

- 1) Allow areas to go to meadow or field and mow once or twice per year rather than every week.
- 2) Keep mower blades sharpened to avoid damaging grass leaf tissue.
- 3) Mow when the grass is dry to prevent spread of turf diseases.
- 4) Sweep lawn clippings and debris instead of using water.
- 5) Mulch grass clippings using a mulching mower.
- 6) Fill gas tanks in a controlled location.

Never:

- 1) Never irrigate based on timers/schedules instead of monitoring for moisture content.
- 2) Never dump gas, wastes or contaminated water down storm drains.
- 3) Never refuel or change the mower oil near storm drains.
- 4) Never leave mower running in one location (to prevent burning and over- cutting of vegetation).

Standard Operating Procedure for:		
B.9 Vehicle and Equipment Storage (Municipal and Jefferson County Employees)		
Purpose of SOP:	To protect Storm Water from petroleum products that may drip or leak from vehicles and equipment being stored or from dirt and sediment that accumulate in the storage	

Always:

- 1) Inspect parking areas for stains/leaks on a regular basis.
- 2) Use drip pans or adsorbents for leaking vehicles (provide a labeled location to empty and store drip pans).
- 3) Address any known leaks or drips as soon as possible.
- 4) Clean up spills.

Whenever Possible:

- 1) Store vehicles inside where floor drains have been properly connected and registered.
- 2) Store vehicles on paved areas, and street sweep on a regular basis to remove drips/leaks/dirt, and dispose of street sweepings properly.
- 3) Maintain vehicles to prevent leaks.

Never:

- 1) Never store leaking vehicles over a storm drain.

Related References	
	-USEPA National Menu of BMPs

Standard Operating Procedure for:	
B.10 Vehicle and Equipment Washing (Municipal, JCDH, and Jefferson County Employees)	
Purpose of SOP:	To protect Storm Water using proper washing techniques, proper washing locations, and proper disposal of wash water for heavy and light-duty vehicles and equipment.

Always:

- 1) Operate a closed system with wastewater recycling (like a floor drain discharge to a holding tank), or
- 2) Discharge to a municipal sanitary sewer, or
- 3) Obtain a Septic Tank permit from JCDH, or
- 4) Wash fewer than 30 vehicles per week and discharge to the ground surface, if
 - Good Best Management Practices Rules are used,
 - The discharge is registered through NPDES permitting, and
 - The washwater:
 - a) is not from power washing, steam cleaning, engine cleaning, or undercarriage cleaning,
 - b) does not contain soaps or other products which contain regulated contaminants, and
 - c) does not discharge to a surface water.

Whenever Possible:

- 1) Use a commercial car wash for light duty vehicles.
- 2) Obtain and use drain guards (filter inserts) to catch sediments, petroleum products, etc. that might enter the storm drains as a result of vehicle washing.
- 3) Minimize water and soap use when washing or rinsing vehicles.

Never:

- 1) Never perform engine or undercarriage washing outside.
- 2) Never wash vehicles over a storm drain or near drinking water wells.
- 3) Discharge washwater to a surface water.

Related References	
	-Alabama Department of Environmental Management

Standard Operating Procedure for:	
B.11 Vehicle and Equipment Fueling (Municipal, JCDH, and Jefferson County Employees)	
Purpose of SOP:	To prevent Storm Water contamination originating from vehicle and equipment fueling.

Always:

- 1) Fuel carefully to minimize drips to the ground surface.
- 2) Maintain clean fuel dispensing areas using dry cleanup methods.
- 3) Clearly label and tag all valves to reduce human error.
- 4) Train employees and subcontractors on proper fueling methods and spill cleanup techniques.
- 5) Maintain fuel storage tanks in accordance with local, state and federal laws.
- 6) Have absorbent spill cleanup kits and materials available at fueling areas.
- 7) Immediately clean up spills and properly dispose of contaminated soil and cleanup materials.
- 8) When fueling small equipment from portable containers, fuel in a designated area away from storm drains and waterbodies.

Whenever Possible:

- 1) Install a canopy or roof over aboveground storage tanks and fuel transfer areas.
- 2) Regularly inspect fueling equipment for corrosion and structural failure, cracks in foundations, and physical damage to container systems.
- 3) Use designated fueling areas built upon a level impervious surface (hard cement is best). If paved with asphalt, add a protective coating to create an impervious surface, inspect regularly, and street sweep quarterly at a minimum.
- 4) Protect storm drains from fueling areas using berms and dikes.
- 5) Use absorbent material or absorbent pads during fueling to collect leaks.

Never:

- 1) "Top off" fuel tanks (post signs to remind employees).
- 2) Hose down or bury a fuel spill.

Related References	
	-USEPA National Menu of BMPs

Standard Operating Procedure for:	
B.12 Spill Cleanup (Municipal, JCDH, and Jefferson County Employees)	
Purpose of SOP:	To protect Storm Water by educating employees on proper spill cleanup procedures, state reporting requirements and preventative actions.

Always:

- 1) Stop the source of the spill, if possible to safely do so.
- 2) Contain any liquids, if possible to safely do so.
- 3) Contact the appropriate emergency response number (see below) during normal working hours (8:00 a.m. – 4:00 p.m., Monday - Friday) to report spills.
 - **Jefferson County Emergency Management Agency– Oil and Response (205)254-2039**
 - **National Response Center – Chemical or Oil Spills that Impact Surface Water (800) 424-8802**
 - **USEPA Region 4 –(800)241-1754 or (404)562-9900**
- 4) Cover the spill with absorbent material such as kitty litter, sawdust, or oil absorbent pads. Do not use straw or water. (See SOP B.16 for adsorbent disposal.)
- 5) Petroleum spills involve, but are not limited to: crude oil, gasoline, heating oil, various fuel oils, lubricating oil, hydraulic oil, asphaltic residuals.
- 6) Report a petroleum spill if:
 - The spill is greater than 25 gallons, or
 - The spill cannot be immediately contained, or
 - The spill and/or contamination cannot be completely removed within 24 hours, or
 - There is an impact or potential impact to ground/surface water.
 - **IF IN DOUBT, REPORT THE SPILL**
- 7) Hazardous materials spills involve non-oil spills that pose a threat to human health or the environment, such as chemical releases.
- 8) Report any discharge of hazardous waste immediately, (within one hour) to local emergency officials [fire department], then contact the Jefferson County Emergency Management Agency as listed above
- 9) Contact local fire department _____(phone #).
- 10) Develop and maintain a Spill Prevention, Control, and Countermeasure (SPCC) Plan if the facility stores more than 1,320 gallons of petroleum.
- 11) Fit petroleum and chemical storage containers with secondary containment structures.
- 12) Keep a spill kit in areas where petroleum or hazardous materials are stored.
- 13) Train employees in spill response procedures and equipment annually.
- 14) Deploy containment booms if spill could potentially reach a storm drain or waterbody. JCDH is working with local fire departments to develop these maps which should be done by 2015
- 15) Position mats to contain drips from equipment or vehicles until they can be repaired.

Whenever Possible:

- 1) Seal the floor with paint to prevent absorption of fluids into concrete.
- 2) Install low-level or low-pressure alarms and/or cut-off systems on hydraulic equipment.

Never:

- 1) Never wash a spill into the storm drain or a water body.
- 2) Never leave a spill without cleaning it up.

Standard Operating Procedure for:	
B.13 Parts Cleaning (Municipal and Jefferson County Employees)	
Purpose of SOP:	To protect Storm Water by practicing proper parts cleaning techniques and disposing of waste cleaners properly.

Always:

- 1) Perform all cleaning in a designated area to minimize the potential for spills.
- 2) Store waste cleaners in properly labeled containers in accordance with regulations.
- 3) Dispose of all waste cleaners properly with a licensed contractor, on a regular basis.
- 4) Close parts-cleaner lid when it is not in use.

Whenever Possible:

- 1) The variety of cleaners should be minimized to make recycling and disposal simpler.
- 2) Use citrus-based cleaners and dispose of properly.
- 3) Use steam cleaning, pressure washing, or aqueous washers instead of solvents; however wastewater must be discharged to an oil/water separator and the wastewater treatment plant notified, or to a JCDH registered septic tank.

Never:

- 1) Never dispose of spent cleaners down the floor drains, sinks, storm drain, on the ground or into the air. Disposal by evaporation violates the Alabama Hazardous Waste Rules.
- 2) Never mix or add spent or fresh solvents to used oil.
- 3) Never use gasoline as a cleaner or solvent.
- 4) Never burn spent parts cleaning fluids in a used oil burner.
- 5) Never use a hand-held cleaner in/near the parts cleaner; never mix cleaners.

Standard Operating Procedure for:		
B.14 Spare Parts Storage		
Purpose of SOP:	To protect Storm Water by properly storing spare parts. Improper storage of materials can result in pollutants and toxic materials entering ground and surface water supplies.	

Always:

- 1) Store spare parts in a designated area.
- 2) Use drip pans for any parts that are dripping.

Whenever Possible:

- 1) Store spare parts inside or under cover.
- 2) Monitor storage areas for staining/leaks on a schedule decided on by the appropriate personnel.
- 3) Clean the majority of petroleum products from the parts that are to be stored.

Related References	
	-USEPA National Menu of BMPs

Standard Operating Procedure for:	
B.15 Alternative Products Use/Storage/Disposal (All Organizations)	
Purpose of SOP:	To protect Storm Water by using alternative products that are more environmentally friendly.

Always:

- 1) Ask product suppliers, peers, or regulatory agents if there is a more environmentally friendly alternative, when ordering any product.

Whenever Possible:

- 2) Use alternative products when deemed appropriate:
 - Instead of solvent-based parts cleaners use citrus-based cleaners or steam/pressure wash to an oil/water separator/holding tank.
 - Instead of herbicides use bark mulch.
 - Instead of fertilizer use compost or manure.
 - Instead of pesticides plant marigolds, onion, or garlic as deterrents; release or attract beneficial insects.
 - Instead of synthetic adsorbents, use corncob or cellulose products for petroleum spills that can be burned for energy recovery.
- 3) Train employees annually on the benefits of using alternative products.
- 4) Minimize waste by purchasing recyclable products that have minimal packaging.
- 5) Use less harmful deicers such as calcium magnesium acetate, potassium acetate, or organic deicers such as Magic Salt™.
- 6) Use a "pre-mix" of 4 to 1 sodium chloride and calcium chloride, which is the most cost- effective alternative to straight salt.
- 7) Substitute synthetic fertilizers with natural compost and organic fertilizers to improve soil pH, texture and fertility, and cause less leaching to groundwater.
 - Use no-phosphorus lawn fertilizer.
 - Use natural or certified organic fertilizers with low phosphorus levels (8-2-4, 6-2-4, 9-1-1, 6-1-1).
- 8) Use slow-release nitrogen fertilizers.
- 9) Reduce or eliminate mown lawn in areas that are not actively used.
- 10) Consider converting unused turf to meadow or forest.

Related References	
	-USEPA National Menu of BMPs

Standard Operating Procedure for:	
B.16 Petroleum and Chemical Disposal (Municipal and Jefferson County Employees, Homeowners)	
Purpose of SOP:	To protect Storm Water from petroleum and chemical products due to improper disposal practices.

Always:

- 1) Maintain tracking and manifest to report to JCDH or Storm Water Management Authority, Inc, where necessary, of chemicals and petroleum products being disposed or recycled off-site.
- 2) Transports used petroleum and chemical products with a licensed transporter and maintain records for three years.
- 3) Train employees annually on proper disposal practices.
- 4) Drain used oil filters for 24-hours before crushing and disposal (disposal in regular trash allowed).
- 5) Analyze floor drain solids (from sediment trap) for TCLP to determine if hazardous waste or not.
- 6) Contaminated cloth wipe may be laundered onsite or offsite, liquid free, and stored in a closed, labeled container.

Whenever Possible:

- 1) Minimize the number of solvents used to reduce the variety of waste generated and to make recycling easier.
- 2) Use safer alternatives. (see Alternative Products SOP)
- 3) If burning used oil for on-site heat, analyze for these used oil standards (Arsenic, Lead, Cadmium, Chromium, F- listed Halogens, Flashpoint, PCBs) approximately once every 1,000 gallons.

Never:

- 1) Never place hazardous waste in solid waste dumpsters.
- 2) Never pour liquid waste down floor drains, sinks or outdoor storm drain inlets.
- 3) Never mix petroleum waste and chemical waste.
- 4) Never dispose of any gasoline-contaminated waste in the regular trash. Dispose of it only as a hazardous waste.

Standard Operating Procedure for:	
B.17 Petroleum and Chemical Handling (Municipal and Jefferson County Employees)	
Purpose of SOP:	To protect Storm Water by properly managing petroleum products and chemicals used by municipalities.

Always:

- 1) Train employees in hazardous material handling, safety, spill cleanup and reporting on an annual basis.
- 2) Handle petroleum products and chemicals according to manufacturer’s specifications.
- 3) Conduct oil changes indoors for equipment that fits indoors.
- 4) Use proper protective equipment.
- 5) Maintain Material Safety Data Sheets (MSDS) for all chemicals used.
- 6) Make MSDS sheets available on materials that require special handling, storage and/or disposal.
- 7) Create a sign-off sheet for employees stating that they know the location of the MSDS(s) and provide to JCDH or Storm Water Management Authority, Inc.
- 8) Train new employees within six months of hire. A record of this should be kept and given annually to JCDH or Storm Water Management Authority, Inc

Whenever Possible:

- 1) Assess hazardous material needs to minimize the amount and variety of hazardous material in storage.
- 2) Keep an inventory of hazardous materials on hand.
- 3) Transfer materials from one container to another indoors in a well ventilated area.
- 4) Properly label containers.

Never:

- 1) Never treat or dispose of hazardous materials unless licensed to do so.
- 2) Never mix petroleum or chemicals unless directed by manufacturer’s instructions.

Related References	
	-USEPA National Menu of BMPs

Standard Operating Procedure for:	
B.18 Petroleum and Chemical Storage – Bulk (Municipal and Jefferson County Employees)	
Purpose of SOP:	To protect Storm Water by properly storing bulk petroleum products and chemicals (containers larger than 55 gallons).

Always:

- 1) Store materials away from high traffic areas, posted with appropriate signage.
- 2) Store materials according to manufacturer's specifications in approved containers and conditions.
- 3) Be prepared for possible spills by having a spill kit nearby.
- 4) Register ASTs if your facility stores more than 660 gallons of petroleum products (10,000 gallons if used for on-site heating).
- 5) Develop and use a Spill Prevention Control and Countermeasure (SPCC) plan if storing more than 1,320 gallons of petroleum (required).
- 6) Store incompatible hazardous materials in separate areas.
- 7) Inspect storage areas for leaks or drips frequently.
- 8) Store bulk items within secondary containment areas if bulk items are stored outside.
- 9) Conduct annual employee training to reinforce proper storage techniques for petroleum and chemical products. Keep record and present to JCDH or Storm Water Management Authority, Inc annually.

Whenever Possible:

- 1) Store bulk chemicals and petroleum products inside or under cover.
- 2) Provide secondary containment for interior storage.
- 3) Cover transfer areas.

Never:

- 1) Never store bulk chemicals or petroleum products near a storm drain.

Standard Operating Procedure for:	
B.19 Petroleum and Chemical Storage – Small Quantity (All organizations and Homeowners)	
Purpose of SOP:	To protect Storm Water from pollution by properly storing petroleum products or chemicals (containers 55 gallons and smaller).

Always:

- 1) Store materials away from high traffic areas.
- 2) Store materials according to manufacturer's specifications (e.g. in a flammable materials storage cabinet).
- 3) Dispose of unused or waste materials properly.
- 4) Train employees on proper storage procedures for petroleum and chemical products.
- 5) Store materials in their original containers to maintain appropriate labeling.
- 6) Be prepared for spills by having a spill kit nearby.
- 7) Frequently inspect the storage areas for leaks or spills.
- 8) Conduct annual employee training to reinforce proper storage techniques for petroleum and chemical products. A list should be provided to JCDH or Storm Water Management Authority, Inc at the end of the permit cycle.

Never:

- 1) Never store petroleum or chemical products near a floor drain or Storm Water inlet.

Standard Operating Procedure for:	
B.20 Garbage Storage (All Organizations and Homeowners)	
Purpose of SOP:	To protect Storm Water from contamination by properly storing garbage. Garbage and leachate can be transported by Storm Water and enter the storm drain system and receiving waterbodies.

Always:

- 1) Cover rubbish bins to keep rubbish and leachate in and wind and rain out.

Whenever Possible:

- 1) Store garbage containers beneath a covered structure or inside to prevent contact with Storm Water. This is done on all food establishments as well by JCDH.
- 2) Install berms, curbing or vegetation strips around storage areas to control water entering/leaving storage areas.
- 3) Locate dumpsters on a flat, concrete surface that does not slope or drain directly into the storm drain system.
- 4) Locate dumpsters and trash cans in convenient, easily observable areas.
- 5) Provide properly-labeled recycling bins to reduce the amount of garbage disposed.
- 6) Inspect garbage bins for leaks regularly, and have repairs made immediately by responsible party.
- 7) Keep bins free of improperly discarded trash.
- 8) Provide training to employees to prevent improper disposal of general trash.
- 9) Minimize waste by purchasing recyclable products that have minimal packaging.
- 10) Request/use dumpsters without drain holes.

Never:

- 1) Never place hazardous wastes in a dumpster or trash bin.
- 2) Never place gasoline-contaminated wastes in a rubbish bin (but small quantities of adsorbents from virgin oil spills are acceptable).
- 3) Never place oil-contaminated materials that release free draining oil into a rubbish bin.

Standard Operating Procedure for:	
B.21 General Facility Housekeeping (All Organizations)	
Purpose of SOP:	To protect Storm Water by maintaining a clean, organized facility.

Always:

- 1) Keep open areas clean and orderly.
- 2) Pick up litter.
- 3) Conduct regular employee training and public education to reinforce proper housekeeping. Keep internal records to provide to Storm Water Management Authority, Inc or JCDH.
- 4) Remove unused scrap/junk materials.
- 5) Store hazardous materials as specified by the manufacturer.

Whenever Possible:

- 1) Store materials and wastes inside or under cover if outside.
- 2) Substitute less or non-toxic materials for toxic ones.
- 3) Perform a routine cleaning of the facility.
- 4) Inspect facility (interiors, exterior, parking areas, etc.) for stains.

	-USEPA National Menu of BMPs

Standard Operating Procedure for:		
B.22 Floor Drains (Municipal and Jefferson County Employees)		
Purpose of SOP:	To protect Storm Water from pollution caused by discharges of hazardous materials to the subsurface, ground surface, waterway, or storm sewer through floor drains.	

Always:

- 1) Keep a spill kit in the vicinity of the floor drains.
- 2) Obtain and use drain mats, adsorbent booms or covers to keep larger spills out of drains.
- 3) Use floor drains that are (1) connected to a holding tank or (2) connected to the sanitary sewer via an oil/water separator.
- 4) Keep internal map of floor drains that have regulated contaminants stored or used near them.
- 5) Register septic tanks with JCDH.

Whenever Possible:

- 1) Minimize water use or run a dry shop.

Never:

- 1) Never dump hazardous materials down the floor drains.
- 2) Never use floor drains if you are unsure of their discharge location.
- 3) Never store regulated contaminants near a floor drain that discharges directly to the environment.

Standard Operating Procedure for:	
B.23 Painting (All Organizations and Homeowners)	
Purpose of SOP:	To protect Storm Water by properly storing, using and disposing of paint and preparation materials.

Always:

- 1) Store waste paints, solvent, and rags in sealed containers.
- 2) Perform abrasive blasting and spray painting in accordance with regulations.
- 3) Properly clean, store, and dispose of paint and associated waste materials.
- 4) Train employees on Best management Practices concerning painting activities, cleanup, and disposal.

Whenever Possible:

- 1) Replace solvent-based paint with less toxic paints such as latex or water-based paints.
- 2) Practice "source reduction" – buy only the paint that is needed.
- 3) Use up, donate or recycle unused paint.
- 4) Use drop cloths under any painting or preparation activity such as scraping or sandblasting.
- 5) Use techniques such as brushing and rolling to avoid overspray.
- 6) Use vacuum sanders to collect paint dust.
- 7) Perform abrasive blasting and spray painting in an enclosed or covered area that is safe for personnel.

Never:

- 1) Never dispose of paint or waste paint products into the storm drain system, a waterbody, or onto the ground.

Standard Operating Procedure for:	
B.24 Street Sweeping	
Purpose of SOP:	To remove sediment, debris and other pollutants from streets, parking areas, and paved surfaces through regular, properly timed sweeping schedules.

Always:

- 1) Sweep all publicly accepted paved streets and parking lots at least once per year as soon as possible after snowmelt.
- 2) Dispose of street sweepings properly (reuse is unrestricted if visual evidence of litter, animal waste, and petroleum contamination is absent).
- 3) Keep data logs on the mileage of street sweeping conducted in each city to provide to Storm Water Management Authority, Inc or JCDH such as the form below.

Whenever Possible:

- 1) Start at the “top” of town and work down.
- 2) Sweep downtown areas more frequently (daily).
- 3) Perform additional sweeping on a seasonal schedule and document areas swept.
- 4) Sweep in locations that generate debris, such as construction entrances, sand/salt loading areas, vehicle fueling areas, and vehicle and equipment storage areas on an as needed basis.
- 5) Street sweep before a major rain event.
- 6) Use dry vacuum assisted street sweepers (the most effective).
- 7) Maintain street sweeping equipment for maximum effectiveness.
- 8) Cover storage areas or locate storage areas where runoff discharges to a buffer.
- 9) Clean catch basins after streets are swept.

Never:

- 1) Never store street sweepings in areas where Storm Water could transport fines to the storm drain system or a waterbody.
- 2) Never purposely sweep into the storm drain system.

Standard Operating Procedure for:	
B.25 Snow Disposal (Municipal and Jefferson County Employees)	
Purpose of SOP:	To protect Storm Water by minimizing the impact of snow piles which contain sand, salt, and trash and which generate concentrated releases of pollutants during spring snowmelt conditions.

Always:

- 1) Identify sensitive ecosystems prior to disposal and avoid snow disposal in these areas.
- 2) Store snow at least 25 feet from the high water mark of a surface water.
- 3) Store snow at least 75 feet from any private water supply, at least 200 feet from any community water supply, and at least 400 feet from any municipal wells.
- 4) Install a double row of silt fence or equivalent barrier securely between the snow storage area and the high water mark, and inspect periodically throughout the winter season.
- 5) Clear debris in storage area each year prior to snow storage use.
- 6) Clear all debris in snow storage area and properly dispose of no later than April 15 or immediately after snowmelt occurs of each year the storage area is in use.

Whenever Possible:

- 1) Select storage locations that do not drain into surface waters and where environmental impacts of spring melt are minimal.
- 2) Store snow on areas that are well above the groundwater table on a flat, vegetated slope.
- 3) Avoid disposal on pavement, concrete, and other impervious surfaces.
- 4) Do not pile snow in wooded areas, around trees or in vegetative buffers.
- 5) Divert run-on of water from areas outside the snow piles.
- 6) Use less harmful deicers such as calcium magnesium acetate, potassium acetate, or organic deicers such as Magic Salt™.

Never:

- 1) Never dispose of snow in wetlands, lakes, streams, rivers, or near drinking water sources.
- 2) Never store snow in well-head protection areas (class GAA groundwater).

Standard Operating Procedure for:	
B.26 Deicing Material Storage (Municipal and Jefferson County Employees)	
Purpose of SOP:	To protect Storm Water by properly storing deicing materials. Sand, salt and other deicing materials used during winter can be transported by runoff into the storm drain system and eventually into waterbodies if not stored properly.

Always:

- 1) Locate sand/salt piles and deicing fluid tanks on flat, impervious sites that are easily protected from overland runoff and away from surface waters.
- 2) Cover sand/salt and salt piles with a tarp (polyethylene) during non-freezing spring and summer months when indoor storage facilities are not available.
- 3) Fill out form below on amounts and facility location

Whenever Possible:

- 1) Contain wash water from trucks used for salting and sanding in a holding tank for disposal or discharge into sanitary sewers.
- 2) Allow rinse water/melt water to drain into vegetated buffers (away from storm drains).
- 3) Locate deicing material stockpiles and tanks at least 100 feet from streams and flood plains.
- 4) Contain Storm Water runoff from areas where salt is stored by using buffers to diffuse runoff before entering waterbodies.
- 5) Use diversion berms to minimize run-on to storage areas.
- 6) Cleanup "truck tracks" after storm events.

Never:

- 1) Never dispose of wash water from sanding and salting trucks into the storm drain system, a waterbody, or septic system drain fields.

Standard Operating Procedure for:	
B.27 Deicing Material Application	
Purpose of SOP:	To protect Storm Water by improving application techniques of salt, sand, and other deicing materials.

Always:

- 1) Apply as little sand and salt as needed, and no more than the NHDOT recommended application rates (based on level of service):

Condition	Highways carrying greater than 5,000	Highway/roads carrying less than 5,000 vehicles daily
Snow - 20°F and	250 lbs salt	250 lbs salt per lane mile
Snow – below 20° F	250 lbs salt	Abrasive chemical mix
Sleet/freezing rain	300 lbs salt	300 lbs salt per lane mile

Whenever Possible:

- 1) Inform salt applicators of sensitive areas, such as public water supplies, lakes, ponds, etc b installing permanent signs.
- 2) Use de-icing alternatives such as calcium magnesium acetate, sand, etc. in sensitive areas.
- 3) Use the minimum amount of salt and sand needed to get the job done.
- 4) Use coarse, clean “washed” sand, which is free of fine particles and dust and easier to clean in the spring.
- 5) Equip all spreaders with ground-speed controllers.
- 6) Train drivers to improve application techniques and reduce losses.
- 7) Consider applying salt in a 4-8 foot strip along centerline of a two-lane road (for less traveled roads).
- 8) Know when to plow and reapply salt. Allow maximum melting by salt before plowing.
- 9) Remove snow manually from driveways and sidewalks.
- 10) Street sweep accumulated salt and sand at the end of the season.

Standard Operating Procedure for:	
Structural Control Inspection	
Purpose of SOP:	To inspect and maintain structural controls of MS4
ADEM Permit Reference:	Part II.B.1.a.ii.3
Effective Date:	March 2017

Personnel Qualifications

1. Knowledge of the types of structural components associated with storm water management facilities; and,
2. Initial training in the information and data to be collected during an inspection.

Procedural Steps

1. Obtain the necessary equipment and materials needed to perform the inspection. Equipment and materials shall include the following.
 - a. Updated inventory of structural controls
 - b. Structural Controls Quarterly Inspection Form or mobile app; and
 - c. Camera
2. Facility Information
 - a. Verify name, facility ID, location and watershed of structural controls
 - b. Select inspection type
 - c. Select weather conditions
 - d. Select land use
 - e. Identify structure type
 - f. Identify outlet type
 - g. Confirm that it is a structural control
3. Inspection observations
 - a. Walk the perimeter of the structural control and inspect for the items listed;
 - b. Provide comments as necessary to describe observations; and,
 - c. Take pictures to document existing conditions of the structural control.
4. Follow-up actions
 - a. Identify if follow-up actions or maintenance activities are required at the structural control;
 - b. Check the items that require follow-up actions; and,
 - c. Provide comments as necessary to describe the follow-up actions and/or maintenance required.
5. Inspector information
 - a. Complete all items; and,
 - b. Identify if photographs were taken as part of the inspection and attached to the report.
6. Finalize Structural Controls Inspection Form and include applicable photographs
7. Submit the inspection report on the mobile app to the GIS department. The GIS department will provide reports from this data.

Standard Operating Procedure for:		
IDDE: Notification of Alabama Department of Environmental Management		
Purpose of SOP:	To notify Alabama Department of Environmental Management (ADEM) of a suspect illicit discharge entering the Permittee's MS4 from an adjacent MS4	

Always:

- 1) If source of illicit discharge is not the permittee but an adjacent MS4 contact the following parties:
 - 1) The adjacent MS4 permit
 - 2) ADEM

Whenever Possible:

- 1) Turn over any water quality analysis data and notes.

APPENDIX D

Construction Site Storm Water Runoff Control

Project Name: _____ File Number _____

Inspection Date: _____ Time _____ Inspector's Name _____

Stage of Construction (Circle one)					
Pre-Construction Conference		Clearing and Grubbing		Rough Grading	
Building Construction		Finish Grading		Final Stabilization	
Erosion Prevention					
Y	N	N/A	Have all disturbed areas requiring temporary or permanent stabilization been adequately stabilized by an appropriate BMP (erosion control blankets, aggregate, seed, mulch, etc.)?		
Y	N	N/A	Are soil stock piles adequately stabilized with seeding and/or proper sediment control measures?		
Y	N	N/A	Are utility trenches properly stabilized?		
Y	N	N/A	Are perimeter sediment control measures correctly installed, maintained and effective (silt fence, etc.)?		
Y	N	N/A	Are finished cut and fill slopes adequately stabilized?		
Y	N	N/A	Are storm water conveyance channels adequately stabilized with channel lining?		
Sediment Control					
Y	N	N/A	Have sediment control BMP's been constructed as a first step in land disturbing activities (basins, etc.)?		
Y	N	N/A	Are sediment control BMP's installed where needed?		
Y	N	N/A	Have all sediment control BMP's been repaired and sediment removal been performed?		
Y	N	N/A	Do all operational storm sewer inlets have adequate inlet protection?		
In-stream Construction					
Y	N	N/A	Is the in-stream construction permitted? (Check to see if U.S.A.C.E permit is needed)		
Y	N	N/A	Are current construction practices minimizing channel damage?		
Y	N	N/A	Are temporary stream crossings of non-erodible material installed where applicable?		
Y	N	N/A	Is necessary re-stabilization of in-stream construction complete?		
General Groundskeeping					
Y	N	N/A	Are soil and mud kept off public roadways at intersections with access roads (entrance BMPs)?

Spill Prevention and Response

Standard Operating Procedure for:	
Spill Prevention and Response: Spills, Illicit Discharges and Improper Disposals	
Purpose of SOP:	To notify the correct responder in the event of a spill, illicit discharge, or improper disposal

No Immediate Danger-If the event does not pose an immediate threat to life, health or safety

- Call City Hall – (205) 956-9200
- Notify the city through the Contact webpage

Immediate Danger-If the event does pose an immediate threat to life, health, or safety; or if you are uncertain if the event poses a threat:

- Call 911
- Call City Hall – (205) 956-9200

City of Irondale Fire Department Standard Operating Procedure (SOP)

If the event can be managed by Fire Department Personnel:

- If possible, shut off the source of the spill immediately
- Deploy absorbent products and/or diking materials to contain the spill.
- Spills on pervious areas may require removal of soil or other contaminated materials.
- Consult Jefferson County EMA for disposal requirements for all products and materials used to mitigate spills
- If the event requires outside personnel: The Irondale Fire Department will contact Jefferson County EMA and follow EMA protocol. Hazmat and decontamination units will be contacted as needed.

APPENDIX F

Pollution Prevention/Good Housekeeping for Municipal Operations

Quarterly Inspection Checklist

Inspection Area	Status (Please answer with Acceptable/Needs Attention/Not Applicable)	Comments	Date Resolved (if applicable)
Check refuse areas for trash on the ground that could contaminate stormwater or be washed away in stormwater			
Check all exterior vehicle and equipment areas for leaks, spills, drips, or excess dirt - Street sweeping necessary?			
Check all exterior vehicle and equipment areas for leaks, spills, drips, or excess dirt - drip pan use acceptable?			
Check fueling areas for leaks, spills, or drips			
Check exterior petroleum storage areas for leaks, spills, or drips			
Clean-up of tracked sand that might allow stormwater transport of sand			
Check calcium chloride tank for leaks, spills, or cracks			
Check vehicle washing area for excess sediment or wastes			
Other:			
Other:			

Instructions: This form needs to be used for regular (quarterly) inspections at vehicle/equipment maintenance facilities. More information on pollution prevention and good housekeeping can be found in Chapter 3 of the 2011 Guidelines and Standard Operating Procedures Manual (SOP manual)

Municipality _____ Division _____ Date _____

Standard Operating Procedure for:		
Pollution Prevention/Good Housekeeping for Municipal Operations: Special Events		
Purpose of SOP:	To identify the ways the city reduces the amount of trash entering the MS4 as well as the waters of the State.	

City Policy for Special Events

- Provide extra trash receptacles for event to reduce litter.
- Provide recycling receptacles during an event to reduce litter.
- Provide extra personnel during event to pick-up litter during and after event.
- Cleanup event area within 24 hours.

Stormwater Discharge Inspection for Industrial and Commercial Facilities

Inspection Team:	Date:	Time:
Facility Name:	Facility Contact and Title:	NAICS code:
Facility Street Address:	City:	Zip:
Phone Number:	Fax Number:	
Business License #:	Facility Size (acres):	
Provide a description of facility and the nature of work performed.		
Provide a description of significant materials that are currently, or were formerly, treated, stored or disposed outside the facility or commercial establishment; materials management practices currently used to minimize contact of these materials with storm water runoff; and a description of any treatment the storm water receives prior to discharge.		
Cleanup schedule for debris, material storage areas, garbage storage or disposal areas, or other areas that have the potential to pollute storm water		

Description of plan of instruction, to employees of all levels, in ways to prevent storm water pollution. Identify specific periodic dates for such training.

Provide a site map showing existing buildings, parking, drives, type of each impervious surface, ditches, pipes, catch basins, drainage basin limits, area of facility, discharge points from the property or to Community Waters, and the name of the receiving waters.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system design to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

7 TIPS TO PROTECT WATERSHEDS AGAINST POLLUTION

- 1 Check your vehicle regularly for leaks. Recycle used motor oil at a participating oil change businesses.
- 2 Have your septic system inspected regularly. Clean out septic tanks every 3-5 years
- 3 Dispose of pet waste properly by picking up after your pets and flushing it down the toilet or placing it in the trash.
- 4 Wash out paint brushes in the sink. Never clean brushes in areas that lead to a storm drain or a nearby stream.
- 5 Use car wash detergents sparingly. Wash your vehicle on grassy or gravel areas to allow the water to naturally absorb into the ground.
- 6 Follow the manufacturer's instructions when applying pesticides and fertilizers. Apply these products when there is no forecasted rain event that can cause runoff.
- 7 Do not place grass clipping and other yard waste in street gutters or storm drains. Compost or bag yard waste to prevent clogged storm drains that may lead to flooding.

Construction Checklist

The process of building a home or adding to your existing residence has a few key steps that must be remembered. The following checklist will give you an aid in this process:

Evaluate the Site: Before any land disturbance has taken place on the site; mark any trees and the areas to be preserved; streams; wetlands; potential, erodible soils such as cherty soils (high rock %); and vegetation that could be useful for filter strips, especially on the perimeter areas. always call Alabama One Call at 1-800-292-8525 or 252-4444 in the Birmingham area.

Permitting: Before any land disturbance has occurred on site, make sure that all necessary permits have been secured through the proper municipality; or if more information is needed on the permitting process, call (205)-930-1230.

Install Perimeter Controls: Identify potential runoff areas where sediment could be channeled offsite. Install perimeter controls such as buffer strips, silt fences, storm drain inlet protection devices, or other BMP control measures to minimize sediment runoff.

Build House and Install Utilities

Maintain Erosion and Sedimentation

Controls: Inspect at least once per week or every 0.75 inch rain event, whichever is more frequent. Maintain until construction is complete. Clean off roadway and site of all debris and sediment.

Revegetate Site: Immediately after house construction is complete, the lot should be stabilized with seed, sod, mulch, or mats. redistribute the stockpiled soil and spread to a depth of 4-6 inches over graded areas. Mulch newly seeded areas.

Remove all Erosion Control Measures

Resources

- Erosion and Sedimentation Control Ordinance
- Alabama Handbook for Erosion Control, Sediment Control and Stormwater Management on Construction Sites and Urban Areas - includes detailed information for the following construction BMPs:

Stabilized Construction Entrance
Gradient Terraces & Surface Roughening
Topsoil & Mulch
Seeding & Sodding
Trees, Shrubs, & Vines
Erosion Control Matting & Geotextiles
Check Dams & Silt Fence
Straw Bale & Sandbag Barrier
Brush or Rock Filter Berm
Temporary Sediment Trap & Basin
Bank Stabilization & Soil Bioengineering
Diversions & Swales
Channel Linings, Gabions, & Riprap
Temporary Inlet & Outlet Protection
Level Spreader
Floating Sediment Curtain

To access the handbook online go to :
http://swcc.alabama.gov/pages/erosion_control.aspx

Please report illegal dumping or discharges in streams, ditches, catch basins, or streets to the Jefferson County Department of Health Stormwater Hotline: (205)-930-1999

Clean Water

IS

Everybody's Business

Information for this brochure was taken in part from the City of Knoxville Erosion and Sedimentation Control Brochure and the Alabama Handbook for Erosion Control, Sediment Control, and Stormwater Management on Construction Sites and Urban Areas, referred to as the Alabama Handbook in this guide.

Erosion and Sedimentation Control: Individual Lot Construction

**Stormwater
Hotline
205 930-1999**

Jefferson County Department of Health
1400 Sixth Avenue South • Birmingham, AL 35233
WWW.JCDH.ORG

Erosion Control is Important

This brochure contains an abbreviated version of Best Management Practices (BMPs) for individual lot construction. These practices should be used as aids to keep sediment on the construction site. Contact Jefferson County Department of Health at (205) 930-1230 for any further regulations.

The result of improper BMP installation on single family homes and construction sites contributes greatly to the amount of sediment released into Alabama's streams and waterways. Sediment is the number one pollutant of waterways in Alabama and the surrounding states.

Sediment can adversely affect our water quality by destroying the habitat that is critical to aquatic organisms and fish. It can also lower property value by destroying the chances for recreational water activities, promoting the growth of weeds and algae, and increasing the chances of flooding.

The cities of the **Storm Water Management Authority** (Adamsville, Brighton, Brookside, Center Point, Clay, Fairfield, Gardendale, Homewood, Hueytown, Irondale, Lipscomb, Maytown, Midfield, Mulga, Mountain Brook, Pinson, Pleasant Grove, Tarrant, Trussville, and Vestavia Hills) must regulate construction sites to ensure that sediment stays on-site for all construction sites. This regulation is mandated by the Environmental Protection Agency (EPA) and is enforced in the *Erosion and Sedimentation Control Ordinance*.

Best Management Practices for Individual Lot Constructions

The use of properly installed BMPs can aid in keeping the sediment on-site. The following are a few useful BMPs for construction on individual lots.

Construction Exit Pad/ Entry

- Prevents tracking soil and debris into roadways.
- Requires 6" aggregate or more if needed.
- Install during clearing and grubbing stage- should be maintained throughout construction.
- Install geotextile under entrance.

Silt Fences

- Used as most common BMP to trap sediment and intercept runoff.
- Install filter fabric correctly by entrenching a portion of it in ground and always remember to place stakes downhill.
- Maintain until permanent vegetation is established.
- Never use on steep slopes or concentrated flow areas.
- Know the difference between Type A, Type B, and Type C silt fences and where applicable.
- Refer to Alabama Handbook, Volume 1, Page 282.

Sediment Cleanup and Good Housekeeping

- Clean up site after each work day by sweeping or scraping off soil tracked onto roads.
- Inspect all BMP measures and repair as need after each storm event.
- Don't allow sediment to build up on silt fence. Clean before the mid-point of the fence is reached.
- Refer to Alabama Handbook, Volume 2, Page 45.

Outlet Protection

- Used on concentrated flows to dissipate energy.
- Cuts down on bank erosion in streams.
- Install over-sized stone (riprap) for calculated design velocities.
- Install geotextile fabric under riprap.
- Refer to Alabama Handbook, Volume 2, Page 111.

Inlet Protection

- All inlets must have some form of protection provided
- Install before any sediment is moved on-site.
- Must be inspected and maintained regularly.
- Refer to Alabama Handbook, Volume 2, Page 127.

Stockpile Placement and Protection

- Build stockpiles away from streams, drainage ways, wetlands, and storm water inlets.
- Temporary seeding or mulching must be performed if sediment is to remain unmoved for 14 working days.
- Refer to Alabama Handbook, Volume 1, Page 69.

Re-vegetation/ Run-off Protection

- Stabilize all exposed surface from erosion.
- Seed, sod, or mat final graded surface.
- Seed all swales, rights-of-way, curb inlet areas, and buffers along streams and wetlands.
- Mulching can be used where acceptable.
- Refer to Alabama Handbook, Vol. 1, Pages 75-161.

Household Hazardous Waste (HHW) Smart Tips:

- Follow instructions on how to handle HHW products and disposal.
- Don't mix leftover HHW products, because they may act as a reacting agent, causing a chemical reaction resulting in an explosion or make HHW items become non-recyclable.
- Watch for hidden dangers: in your home HHW items may not present an immediate hazard, but improper waste disposal can make them a threat to human health and the environment.
- Recycle any HHW items: to save money and further reduce the need to generate more hazardous substances!
- Store all HHW products properly: keep HHW products out of reach of children and animals.

Call JCDH Stormwater Hotline number or visit the website to report HHW being dumped into the storm drains.

Household Hazardous Waste Disposal

What are Considered Household Hazardous Wastes?

The definition of a Household Hazardous Waste is a product that contains chemicals that are corrosive, explosive, reactive, flammable, or toxic. These products can be found in most cabinets throughout your home or storage areas. They include common products such as paint thinner, spot remover, oven cleaner, furniture polish, drain opener, pool chemicals, or hair spray.

The name of a product can indicate whether or not it falls in this category. Names such as pesticide, acid, fungicide, caustic, herbicide, flammable, explosive, or solvent are direct indicators. It is a good practice, to read all product labels carefully before throwing them away.

Improper disposal practices can involve Household Hazardous Waste being discharged into the septic tank, storm drain, on the ground, or placing items on vacant property.

Read Your Products' Labels

Corrosive- a chemical or its vapors that can burn or destroy living tissues at the site of contact, and deteriorate or wear away the surface of a material.

Explosive- violently bursts when exposed to pressure or heat or other substances.

Reactive- can cause explosions, toxic fumes, gases, or vapors when heated, compressed, or mixed with water.

Flammable- can be ignited by a flame, spark, ignition source or hot surface under almost all temperature conditions.

Toxic- can cause injury or death if swallowed, absorbed, or inhaled.

Household Hazardous Waste Affects The Environment

As a precautionary method residents can take steps to reduce the spread of Household Hazardous Waste (HHW) from entering into their home or landfill.

The direct results of HHW can be observed in your local waterways and streams, because most storm drains flow into the Cahaba River, Shades Creek, Village Creek, Valley Creek, Warrior River, and the Locust Fork water bodies with NO treatment.

Some common sources of contaminants in storm water runoff include: spilled oil, fuel, and fluids from vehicles and heavy equipment, construction debris, and landscaping runoff. Sources may also include pesticides or weed killers and materials such as motor oil, antifreeze, and paint products that people pour or spill into a street or storm drain.

Green Tips around the home!

- If you choose to apply fertilizer on your property, read the label carefully and always use precautions in using fertilizer products.
- Use only the amount recommended on the product label. Any amount left over should never be mixed with other fertilizer or pesticide products.
- Avoid applying fertilizer products outside on windy or rainy days. Never apply fertilizer near storm drains or creeks.
- Maintain existing trees on your property, and plant trees and shrubs that prevent erosion and support infiltration of water into the soil.
- Disperse organic deposits such as grass, wood chips, and leaves on soil to act as a compost system to prevent erosion and runoff.
- If you select a professional lawn care service, select a company that uses practices to minimize the use of fertilizers and pesticides.
- Misuse of fertilizers can damage the soil's natural resources essential for healthy grasses and plants. Contact Alabama Cooperative Extension System (ACES) Office or a garden supply center for a soil test kit.

Keep It Green and Simple

Fertilizer Versus Compost

Fertilizer contains large quantities of nutrients such as nitrogen and phosphorous that can potentially wash into storm drains and ultimately into a lake or stream. Nutrients from fertilizer may prompt algal blooms, causing aquatic plants to over grow and suffocate other aquatic life. As a result, algal blooms can remove the oxygen in the water that fish and other organisms need to breathe.

Compost can enhance soil structure and provide nutrients from a composition of decaying organic matter. Compost allows natural fertilizer to be applied to lawns and gardens assisting in the condition of the soil and increasing the nutrients. Compost has been discovered to suppress plant disease and pests, reduce or remove the need for chemical fertilizer, and increase agricultural crops' growth.

What are the Benefits to Compost?

Compost can prevent pollutants from entering into storm water runoff and reaching surface water resources. Another advantage of using compost is that it has been shown to prevent erosion and siltation near water banks, creeks, lakes, streams, roadways and golf courses.

Composting yard trimmings save landfill space and lowers methane production in landfills. The composting process can absorb odors and treat organic compounds. It binds heavy metals and prevents them from transferring to water resources being absorbed by plants and contaminated soils.

Compost has the ability to help restore poor soils. Composting strengthens the production of micro-organisms that break down organic matter to create humus. Humus is a rich nutrient-filled material that increases the nutrients in soils and helps maintain moisture.

Composting is Easy and It Makes Sense!

As an alternative to organic matter entering into storm drains, streams, creeks or landfills, compost can be converted into a beneficial resource which can even be reused around the household or environment.

Listed below are examples of how compost can be beneficial in your area:

- Farmers can use compost to enhance produce and grassy areas along their property.
- Landscapers can use compost as a soil modification for decorative purposes along properties, golf courses and playing fields.
- Landfill operators can use compost to cover waste areas onsite where waste material has been buried and during revitalization projects.
- Garden operators can use compost for improving plant and forest seedling crops in reforestation projects and for preventing certain plant diseases.
- Public operations can use compost for landscaping roadways, recreational parks, and other public property for remediating contaminated or weathered road sites.
- Homeowners use compost to enrich gardens and soils around trees and shrubs.

Pest Smart Tips

- If you choose to use pesticides, read the label carefully and always use precautions to apply pesticides.
- Never water your lawn after applying pesticides.
- Use only the amount recommended on the product label. Any amount left over should never be mixed with other pesticide products or chemicals.
- Always wear appropriate protective clothing. Never wash contaminated clothing with other clothing.
- Avoid planting your garden where treatments for pesticides are regularly applied.
- Avoid applying excessive amounts of pesticide products. Runoff from chemicals can spread onto concrete or paved surfaces and may enter storm drains or waterways with NO treatment.
- Avoid applying pesticide products outside on windy or rainy days. Never apply pesticides near storm drains or creeks.

Integrated Pest Management

Pesticides should be applied only as needed. Integrated Pest Management (IPM) practices should be utilized before applying pesticide products. IPM practices can be applied in rural and urban areas such as in the home, yard, garden area and the workplace to prevent pests from becoming a threat.

Integrated Pest Management is used to incorporate the biological, physical, and least-toxic chemical pest prevention and control methods. IPM controls pests by the most cost-effective means and with the least possible hazards to people, property and the environment.

The least effective control approach is the application of chemicals alone. Using chemicals alone can result in very poor control to reduce or eliminate pests. Sanitation is the key! Remove access to food, water and shelter from pest.

Examples of Integrated Pest Management Practices Include:

- Vegetation, shrubs and wood mulch should be kept at least one foot away from structures.
- Cracks and crevices in walls, floors and pavement should be sealed or eliminated.
- Fertilizers should be sparingly applied seasonally during the year, rather than one heavy application.
- If pesticides are necessary, use spot treatments rather than area-wide applications.

Pest Control and Safety

Once you have identified the pests around your home or work area, purchase only the amount of pesticides that you are going to use. Any leftover pesticides should be used; for example, you can ask your neighbors if they have a similar pest control problem and allow them to use the pesticide.

Always keep pesticides in the original container, separate from fertilizer and herbicides products. Do not reuse the containers with remaining pesticide products. Place containers in the trash, unless the label specifies a different procedure.

Listed below are safety tips that you can follow if children visit your home or yard:

- Always store pesticide products away from children, such as; in locked cabinets or garden sheds.
- Avoid placing rodent or insect baits where small children can get to them.
- Teach children that “pesticides are poisons”- something they should not touch.
- Caution others of the potential hazard of pesticides, including care givers and grandparents.

Storm Drains

Pesticides can negatively affect the quality of water. Whatever flows into the storm drain flows untreated into the waterway. A storm drain is designed to carry excess storm (rain) and ground water from streets and parking lots to prevent flooding. Rain water soaks into the ground; however, once there is pavement blocking water from gaining access to the soil, rain water goes through the storm drains.

Never store pesticides in places where flooding is possible or in places where they might spill or leak into wells, drains, ground water, or surface water. Stormwater runoff can transport chemicals from fertilizers, herbicides, and pesticides into storm drains, streams or waterways. Surface runoff containing these chemicals may cause harmful effects in the water supply and damage a wide variety of organisms. Any debris or chemicals from household gardens, driveways, yards, and streets can be wash into the storm drains.

Pesticides can pollute the waterways. Always avoid pouring leftover pesticides down the sink, toilet, or storm drain. Pesticides may interfere with the operation of wastewater treatment systems or pollute the waterways. If pesticides reach the waterways, they may harm fish, plants, and other living things. Several organisms are harmless and even valuable to the ecosystem.

Small amounts of pesticides can be toxic to aquatic life. Aquatic plants and animals need oxygen and clean water to survive. Household wastes can enter the waterways through storm drains and negatively impact the water quality by decreasing oxygen reserves and contaminating the water.

Tips For Pet Owners

- Choose grassy areas, parks, or undeveloped areas to walk your pets. Stream banks should be avoided as the common territory of animals.
- Pick up after your pets. Pet waste left behind may be washed into storm drains, streams or waterways.
- Pet waste should not be added to backyard compost piles. Although animal manure can make useful fertilizer, parasites carried in dog and cat feces can lead to diseases.
- Regular check-ups and vaccinations by your local veterinarian are important to protect your pet against parasites and pathogens.

Scoop Away The Pet Waste

What Happens To My Pet Waste?

A hidden danger to public health can be found in your very own back yard. Pet waste left on sidewalks, streets, or other paved surfaces are carried by storm water into storm drains and streams.

Storm drains may not always connect to treatment facilities for water purification. Animal feces untreated can end up in local streams and rivers causing water pollution.

Decomposing pet waste consumes oxygen and can release ammonia. Lower oxygen levels and ammonia can result in harmful health effects to fish and aquatic life. Bacteria, viruses, and parasites transmitted by pet waste may pose a danger to the health of humans and wildlife. Nutrients contained in pet waste also support weed and algae growth.

What Are The Health Effects of Pet Waste?

Another health concern associated with pet waste is pathogens. If ingested, humans can be adversely affected by pathogens found in pet feces.

E. coli is a common bacteria. Prominent strains can initiate serious illness and even fatalities. *E. coli*, which causes abdominal gas and diarrhea, has been the source of disease outbreaks in several states.

Cryptosporidium is highly resistant to disinfection with chlorine. This microorganism causes gastrointestinal illness lasting 2-10 days in healthy individuals, but can pose a fatal threat to people with weakened immune systems.

Cat feces may contain toxoplasmosis, a parasite that transmits a disease to humans and other animals. Cats are the only animals identified to release toxoplasmosis oocysts, which are resistant to most disinfectants. Toxoplasmosis is a health risk for pregnant women and individuals with weakened immune systems.

What Can I Do To Prevent Pet Waste?

Picking up your pet waste can result in a cleaner neighborhood and better water quality. Proper disposal of pet feces is important in reducing sources of water pollution.

Pet waste can be discarded by the following methods:

- Flushed down the toilet as long as it is not mixed with other material.
- Sealed in a plastic bag and put into the garbage.

These methods allow a community sewage plant or septic system to appropriately treat waste.

alabama
RAIN BARREL PROJECT

when it rains... it stores.

Rain barrels are a fun and easy way to use water wisely. Water collected in a rain barrel can be used to water the lawn, garden or indoor plants or to wash the car or dog. Using collected rain water reduces the water bill, helps protect streams and replenishes groundwater.

 saving our water, one drop at a time.

Healthy landscape practices promote environmental conservation and keep nature's water cycle flowing for our plants and animals.

A Partnership of:

www.AlabamaRainBarrelProject.com
for the next workshop in your area.

alabama
RAIN BARREL PROJECT

rain rain
come our way...

... to use again another day.

1 Rainwater – should be used by people, plants and trees and should replenish groundwater with only a small portion making its way to our streams. If it runs off quickly, it is called stormwater runoff.

2 Rain Barrel – an easy to make container that saves rainwater for use during a dry period. This saves you money on your water bill and helps protect our water resources.

3 Impervious Surface – your driveway is an impervious surface along with the street and roof. This means that rainwater cannot make its way into the ground where it would water plants and replenish groundwater. Instead it runs off quickly to streams and creeks.

4 Rain Garden – an easy to plant garden that uses native plants to help clean stormwater runoff and allows it to replenish groundwater.

5 Groundwater – water that is found underground and supplies well water for our cities, farmers and families. It also provides the year-round flow for many streams and creeks.

6 Surface Water – water that is found in streams and rivers and provides water for our cities, industries and recreation. When rain occurs, water rushes from impervious surfaces picking up pollutants that are on the ground, carrying them straight to the creek or stream.

Color each litter item being carried into the waterway by the storm drain. Help protect **Clog the Green Frog** by recycling. Remember, recycling is the key! Clean water is essential for you and me!

DON'T LEAVE YOUR WASTE IN MY PLACE

A storm drain is designed to carry excess storm (rain) and ground water from parking lots and streets to prevent flooding. Litter and waste contaminants that storm water carries from road ways can contribute to water pollution that may harm animals, drinking water and the environment.

Children play a part in protecting our streams by educating their friends on recycling and keeping litter such as soda cans, plastic bottles, plastic bags and paper out of the waterway.

Clog the Green Frog has waste at his place. Help protect Clog from litter items being carried into the waterway by the storm drain. Find each litter item listed below in the word search.

Jefferson County Watersheds

There are six major waterways in Jefferson County. Each waterway is surrounded by a watershed. A watershed is an area where all the water collects into one location such as a pond, lake or river. You can help protect these watersheds from litter by recycling and disposing of trash properly.

Recreational Parks in Every Watershed!

- 1- Turkey Creek Preserve
- 2- Civitan Park
- 3- Chief William C. "Billy" Hewitt Park
- 4- Greenwood Park
- 5- Railroad Park
- 6- Shades Creek Greenway

Watersheds in Jefferson County

- Cahaba
- Shades Creek
- Cahaba River
- Upper Black Warrior
- Black Warrior
- Valley Creek
- Locust
- Locust Fork
- Five Mile
- Village Creek
- Turkey Creek

Jefferson County Department of Health

Watershed Protection Program

JEFFERSON COUNTY
DEPARTMENT OF HEALTH

Serving Jefferson County Since 1917

Storm Water Hotline

930-1999

What is the Jefferson County Department of Health Watershed Protection Program?

The Storm Water Management Authority has contracted with JCDH to perform storm water monitoring, sampling, laboratory analysis, erosion inspection, and education. Storm Water Management Authority members are required by the 1972 Clean Water Act to protect watersheds within their city limits.

JCDH Watershed Protection Program Activities

- Conduct water sampling to monitor prohibited pollutant discharges from entering a storm drain or stream
- Analyze water samples to identify 'Hot Spots'
- Map high-risk areas in order to develop long term strategies
- Monitor residential and commercial construction sites for proper erosion control
- Educate the citizens of Jefferson County on watershed protection

What is a watershed ?

A watershed is the area that drains to a common waterway such as: streams, lakes or oceans.

What can I do to protect my watershed?

- Recycle used motor oil at participating service stations or car maintenance shops

- Pick up after your pets. Leaving pet waste on the ground may cause harmful bacteria to wash into the storm drain
- Clean out septic tanks every 3-5 years
- Sparingly use fertilizers in landscaping projects
- Use caution when applying pesticides These chemicals will wash into your local stream

You can play a part in protecting our streams and rivers by eliminating and reporting pollution in surface waters.

Use Your Senses

- ... if a creek, stream, river, lake or other water body is discolored or an odor is present
- ... if untreated sewage or washing machine waste is present on the ground
- ... if mud from a construction site is entering into the storm drain or stream

Then call

...the Jefferson County Department of Health's Storm Water Hotline:

(205) 930-1999

All messages will be investigated and referred to the proper agency.

Watersheds

A watershed is an area of land where all of the water drains into a specific waterway.

Watershed protection can be achieved by stopping contaminants from reaching the stormdrain system which flows directly into our waterways. Watershed protection is essential in protecting our community's drinking water supply, local aquatic plant and animal life, and our favorite fishing and canoeing spots.

Everyone lives in a watershed. Listed below are tips that YOU can do to protect your local watershed.

- ♦ Dispose of household waste properly. Never dump chemicals into a stormdrain or stream.
- ♦ Cover your garbage cans with secure lids to stop your waste from becoming litter.
- ♦ Use caution when applying fertilizer or pesticide products. These chemicals can cause harm if washed into a local stream.

Native Animal:
Alabama Hog Sucker

Household Hazardous Waste

Household hazardous waste (HHW) products can be found in most cabinets throughout your home and storage areas. Household hazardous waste is a product that contains chemicals that are corrosive, explosive, reactive, flammable, or toxic.

Household Hazardous Waste Safety Tips:

- ♦ Follow instructions on how to handle HHW products and disposal.
- ♦ Don't mix leftover HHW products. Active ingredients within these products may react causing an explosive chemical reaction or result in HHW items becoming non-recyclable.
- ♦ Watch for hidden dangers: HHW items may not present an immediate hazard, but improper disposal can make them a threat to human health and the environment.

Native Animal:
Longear sunfish

Fertilizers

Fertilizers contain large quantities of nutrients such as nitrogen and phosphorous. Nutrients from fertilizers may prompt algal blooms which can lead to low oxygen levels in the water thus endangering aquatic life.

Green Tips

- ◆ Compost can enhance soil structure and provide nutrients from decaying organic matter.
- ◆ Spreading organic deposits such as grass, wood chips, and leaves on soil can improve the soil as well as prevent erosion and runoff.
- ◆ Misuse of fertilizers can damage the soil's natural resources. Contact the Alabama Cooperative Extension System (ACES) Office or a garden supply center for a soil test kit.

Native Animal:
Redeye Bass

Car Wash

Consider going to a commercial wash; commercial car washes are required to properly dispose of wastewater, and many recycle their water. If you select not to use a commercial car wash, try to wash your vehicle on a grassy area or a gravel surface.

Cleaning Tips

- ♦ Use biodegradable soaps or phosphate free soap to wash your vehicle, using as little water as possible.
- ♦ Shut off the water while washing your car, then rinse.
- ♦ When rinsing your vehicle use a spray nozzle to restrict water flow.

Native Animal:
Alabama Darter

For additional information on washing your vehicle visit:
www.adem.alabama.gov/MoreInfo/pubs/CWP_Wash.pdf

Pesticides

There are many pests that are harmless and beneficial to our environment. Integrated Pest Management Practices (IPM) should be utilized before applying pesticide products. IPM practices work to identify, monitor and track pests to accurately incorporate the best methods to prevent them from becoming a threat. If pesticides are necessary, use spot treatments rather than area-wide applications.

Pesticide Tips

- ♦ If you choose to use a pesticide, read the label carefully and always use precautions when applying pesticides.
- ♦ Avoid applying pesticides to your lawn on windy or rainy days.
- ♦ Avoid applying pesticide products near stormdrains and gardens.

Native Animal:
Common Snapping Turtle

Illicit Discharge

An illicit discharge is any discharge into the Municipal Separate Storm Sewer System (MS4) that is not stormwater. Non-stormwater discharges can occur due to illegal connections to the MS4 from homes, commercial businesses or industries. Illicit connections may be intentional or unknown to the home or business owner.

Call the Jefferson County Department of Health's Watershed Protection Program to report an illicit discharge into the MS4. (205-930-1999)

Illicit Discharge Tips

- ♦ Frequent sources of Illicit discharges are illegal floor drain connections or runoff from failing septic systems.
- ♦ Discolored water or a distinct odor can be signs of an illicit discharge.

Native Animal:
Yellow Bullhead Catfish

Household Cooking Grease

Jefferson County Environmental Services Household Cooking Oil and Grease Recycling Program provides a FREE recycling program to promote the health and maintenance of our sewer system. Improper disposal of oil and grease from kitchens can result in sewer blockages. Sewer blockages can lead to sewer overflows which can run into the nearest waterway causing water quality issues.

Below are tips to reduce a sanitary sewer overflows caused by grease.

- ♦ Do not pour fats, oils and grease down sink drains.
- ♦ Scrape grease and food particles remaining on pots, pans and dishes into the garbage.
- ♦ After using your cooking grease, allow it to cool and pour it into an empty container with a lid and recycle it.

Native Animal:
Bluegill Sunfish

Carpet

Carpet and upholstery cleaning wastewater often contains harmful chemicals, cleaning products and dirt that can impact your health as well as the environment. Consider having your carpet professionally cleaned. When having your carpet cleaned, never dispose of the liquid cleaner into or near a stormdrain. Wastewater should be contained inside a holding tank and hauled off-site for proper disposal.

Carpet Cleaning Tips:

- ♦ Select nontoxic products that are environmental friendly cleaning agents.
- ♦ Place carpet in your home only where necessary and clean it properly to increase its life expectancy.
- ♦ Consider recycling your old carpet to prevent it from going into a landfill.

Automobile Fluids

Motor oil and fluids from your vehicle can contain toxic chemicals and heavy metals that are slow to degrade. Check with a local automobile maintenance facility to find out if they accept used automotive fluids.

Automobile Fluids Safety Tips:

- ◆ Conduct routine maintenance on your vehicle and check for leaks. Leaks from your automobile can be carried by stormwater runoff into the nearest waterway.
- ◆ When pouring liquids into your vehicle use a funnel and place a tray beneath your vehicle to catch spills. In the event of a spill, clean it up immediately.
- ◆ Use a leak-proof container with a lid to temporarily store fluids removed from your vehicle until proper disposal.

Native Animal:
Stoneroller Minnow

For additional information on maintenance on your vehicle visit:

- Section 11.2 Severability.
- Section 11.3 Ultimate Responsibility.
- Section 11.4 Effective Date.

Draft Ordinance

STORM WATER MANAGEMENT ILLICIT DISCHARGE

RECITALS

WHEREAS, the purpose of this ordinance is to provide for the health, safety, and general welfare of the citizens of **CITY/TOWN** through the regulation of non-storm water discharges to the storm drainage system to the maximum extent practicable as required by federal and state law.

WHEREAS, this ordinance establishes methods for controlling the introduction of pollutants into the municipal separate storm sewer system (MS4) in order to comply with requirements of the National Pollutant Discharge Elimination System (NPDES) permit process.

WHEREAS, this ordinance provides the minimum content for implementing and enforcing a STORM WATER management consistent with the Alabama Department of Environmental Management (ADEM) permit currently issued to the **CITY/TOWN**.

WHEREAS, the objectives of this ordinance are:

1. To regulate the contribution of pollutants to the municipal separate storm sewer system (MS4) by STORM WATER discharges by any user
2. To prohibit Illicit Connections and Discharges to the municipal separate storm sewer system
3. To establish legal authority to carry out all inspection, surveillance and monitoring procedures necessary to ensure compliance with this ordinance

NOW, THEREFORE BE IT ORDAINED by the City Council of the **CITY/TOWN**, Alabama, as follows:

Draft Ordinance

Section 1 DEFINITIONS

For the purposes of this ordinance, the following words and terms shall have the meaning assigned to them in this section.

Authorized enforcement agency: employees or designees of the director of the municipal agency designated to enforce this ordinance.

Best Management Practices (BMPs): schedules of activities, prohibitions of practices, general good housekeeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices to prevent or reduce the discharge of pollutants directly or indirectly to STORM WATER, receiving waters, or STORM WATER conveyance systems. BMPs also include treatment practices, operating procedures, and practices to control site runoff, spillage or leaks, sludge or water disposal, or drainage from raw materials storage.

Clean Water Act. The federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), and any subsequent amendments thereto.

Construction Activity. Activities subject to NPDES Construction Permits. Currently these include construction projects resulting in land disturbance of 1 acre or more. Such activities include but are not limited to clearing and grubbing, grading, excavating, and demolition.

Hazardous Materials. Any material, including any substance, waste, or combination thereof, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may cause, or significantly contribute to, a substantial present or potential hazard to human health, safety, property, or the environment when improperly treated, stored, transported, disposed of, or otherwise managed.

Illegal Discharge. Any direct or indirect non-storm water discharge to the storm drain system, except as exempted in Section X of this ordinance.

Illicit Connections. An illicit connection is defined as either of the following:

1. Any drain or conveyance, whether on the surface or subsurface, which allows an illegal discharge to enter the storm drain system including but not limited to any conveyances which allow any non-storm water discharge including sewage, process wastewater, and wash water to enter the storm drain system and any connections to the storm drain system from indoor drains and sinks, regardless of whether said drain or connection had been previously allowed, permitted, or approved by the CITY/TOWN or,

Draft Ordinance

2. Any drain or conveyance connected from a commercial or industrial land use to the storm drain system which has not been documented in plans, maps, or equivalent records and approved by the **CITY/TOWN**.

Industrial Activity. Activities subject to NPDES Industrial Permits as defined in 40 CFR, Section 122.26 (b)(14).

National Pollutant Discharge Elimination System (NPDES) Storm Water Discharge Permit. means a permit issued by EPA (or by a State under authority delegated pursuant to 33 USC § 1342(b)) that authorizes the discharge of pollutants to waters of the United States, whether the permit is applicable on an individual, group, or general area-wide basis.

Non-Storm Water Discharge. Any discharge to the storm drain system that is not composed entirely of storm water.

Person. Any individual, association, organization, partnership, firm, corporation or other entity recognized by law and acting as either the owner or as the owner's agent.

Pollutant. Anything which causes or contributes to pollution. Pollutants may include, but are not limited to: paints, varnishes, and solvents; oil and other automotive fluids; non-hazardous liquid and solid wastes and yard wastes; refuse, rubbish, garbage, litter, or other discarded or abandoned objects, ordinances, and accumulations, so that same may cause or contribute to pollution; floatables; pesticides, herbicides, and fertilizers; hazardous substances and wastes; sewage, fecal coliform and pathogens; dissolved and particulate metals; animal wastes; wastes and residues that result from constructing a building or structure; and noxious or offensive matter of any kind.

Premises. Any building, lot, parcel of land, or portion of land whether improved or unimproved including adjacent sidewalks and parking strips.

Storm Drainage System. Publicly-owned facilities by which storm water is collected and/or conveyed, including but not limited to any roads with drainage systems, municipal streets, gutters, curbs, inlets, piped storm drains, pumping facilities, retention and detention basins, natural and human-made or altered drainage channels, reservoirs, and other drainage structures.

Storm Water. Any surface flow, runoff, and drainage consisting entirely of water from any form of natural precipitation, and resulting from such precipitation.

Storm Water Pollution Prevention Plan. A document which describes the Best Management Practices and activities to be implemented by a person or business to identify sources of pollution or contamination at a site and the actions to eliminate or reduce pollutant discharges to STORM WATER, STORM WATER Conveyance Systems, and/or Receiving Waters to the Maximum Extent Practicable.

Wastewater means any water or other liquid, other than uncontaminated storm water, discharged from a facility.

Draft Ordinance

Section 2 ADMINISTRATION

The **CITY/TOWN** shall administer, implement, and enforce the provisions of this ordinance. Any powers granted or duties imposed upon the **CITY/TOWN** may be enforced by _____ or delegated in writing by an official of the **CITY/TOWN** to persons or entities acting in the beneficial interest of or in the employ of the agency.

Draft Ordinance

Section 3 ILLICIT DISCHARGE PROHIBITIONS

Section 3.1 Prohibition of Illegal Discharges.

No person shall discharge or cause to be discharged into the municipal storm drain system or watercourses any materials, including but not limited to pollutants or waters containing any pollutants that cause or contribute to a violation of applicable water quality standards, other than storm water.

Section 3.2 Illegal Discharges Exemptions.

The prohibition shall not apply to any non-storm water discharge permitted under an NPDES permit, waiver, or waste discharge order issued to the discharger and administered under the authority of the Federal Environmental Protection Agency, provided that the discharger is in full compliance with all requirements of the permit, waiver, or order and other applicable laws and regulations, and provided that written approval has been granted for any discharge to the storm drain system.

The following discharges are exempt from discharge prohibitions established by this ordinance provided that they have been determined not to be substantial contributor of pollutants by the City or Alabama Department of Environmental Management (ADEM):

- a) Water line flushing
- b) Landscape irrigation or lawn watering (not consisting or treated, or untreated wastewater unless otherwise authorized)
- c) Diverted stream flows
- d) Uncontaminated ground water infiltration
- e) Uncontaminated pumped groundwater
- f) Discharges from potable water sources
- g) Foundation or footing drains (not including active groundwater dewatering systems)
- h) air conditioning condensation or drains
- i) Irrigation water (not consisting or treated, or untreated wastewater unless otherwise authorized)
- j) Rising ground water
- k) Springs
- l) Water from crawl space pumps
- m) Lawn watering runoff
- n) Individual residential car washing, to include charitable carwashes
- o) Residential street wash water
- p) Discharges or flows from firefighting activities (including fire hydrant flushing)

Draft Ordinance

- q) Flows from natural riparian habitat or wetlands
- r) Dechlorinated swimming pool discharges
- s) Dye testing is an allowable discharge, but requires a verbal notification to the **CITY/TOWN** prior to the time of the test.

Section 3.3 Prohibition of Illicit Connections.

- a) The construction, use, maintenance or continued existence of illicit connections to the storm drain system is prohibited.
- b) This prohibition expressly includes, without limitation, illicit connections made in the past, regardless of whether the connection was permissible under law or practices applicable or prevailing at the time of connection.
- c) A person is considered to be in violation of this ordinance if the person connects a line conveying sewage to the MS4, or allows such a connection to continue.

Draft Ordinance

Section 4 SUSPENSION OF MS4 ACCESS

Section 4.1 Suspension Due to Illicit Discharges in Emergency Situations.

The **CITY/TOWN** may, without prior notice, suspend MS4 discharge access to a person when such suspension is necessary to stop an actual or threatened discharge which presents or may present imminent and substantial danger to the environment, or to the health or welfare of persons, or to the MS4 or Waters of the United States. If the violator fails to comply with a suspension order issued in an emergency, the **CITY/TOWN** may take such steps as deemed necessary to prevent or minimize damage to the MS4 or Waters of the United States, or to minimize danger to persons.

Section 4.2 Suspension Due to the Detection of Illicit Discharge.

Any person discharging to the MS4 in violation of this ordinance may have their MS4 access terminated if such termination would abate or reduce an illicit discharge. The **CITY/TOWN** will notify a violator of the proposed termination of its MS4 access. The violator may petition the **CITY/TOWN** for a reconsideration and hearing.

A person commits an offense if the person reinstates MS4 access to premises terminated pursuant to this Section, without the prior approval of the **CITY/TOWN**.

Draft Ordinance

Section 5

INDUSTRIAL, COMMERCIAL OR CONSTRUCTION ACTIVITY DISCHARGES

Any person subject to an industrial, commercial or construction activity NPDES storm water discharge permit shall comply with all provisions of such permit. Proof of compliance with said permit may be required in a form acceptable to the **CITY/TOWN** prior to the allowing of discharges to the MS4.

Draft Ordinance

Section 6 MONITORING OF DISCHARGES

Section 6.1 Applicability.

This section applies to all facilities that have storm water discharges associated with industrial, commercial, and construction activity.

Section 6.2 Access to Facilities.

- a) The **CITY/TOWN** shall be permitted to enter and inspect facilities subject to regulation under this ordinance as often as may be necessary to determine compliance with this ordinance. If a discharger has security measures in force which require proper identification and clearance before entry into its premises, the discharger shall make the necessary arrangements to allow access to representatives of the **CITY/TOWN**.
- b) Facility operators shall allow the **CITY/TOWN** ready access to all parts of the premises for the purposes of inspection, sampling, examination and copying of records that must be kept under the conditions of an NPDES permit to discharge storm water, and the performance of any additional duties as defined by state and federal law.
- c) The **CITY/TOWN** shall have the right to set up on any permitted facility such devices as are necessary in the opinion of the **CITY/TOWN** to conduct monitoring and/or sampling of the facility's storm water discharge.
- d) The **CITY/TOWN** has the right to require the discharger to install monitoring equipment as necessary. The facility's sampling and monitoring equipment shall be maintained at all times in a safe and proper operating condition by the discharger at its own expense. All devices used to measure STORM WATER flow and quality shall be calibrated to ensure their accuracy.
- e) Any temporary or permanent obstruction to safe and easy access to the facility to be inspected and/or sampled shall be promptly removed by the operator at the written or oral request of the **CITY/TOWN** and shall not be replaced. The costs of clearing such access shall be borne by the operator.
- f) Unreasonable delays in allowing the **CITY/TOWN** access to a permitted facility is a violation of a storm water discharge permit and of this ordinance. A person who is the operator of a facility with a NPDES permit to discharge storm water associated with industrial activity commits an offense if the person denies the **CITY/TOWN** reasonable access to the permitted facility for the purpose of conducting any activity authorized or required by this ordinance.
- g) If the **CITY/TOWN** has been refused access to any part of the premises from which STORM WATER is discharged, and he/she is able to demonstrate probable cause to believe that there may be a violation of

Draft Ordinance

this ordinance, or that there is a need to inspect and/or sample as part of a routine inspection and sampling program designed to verify compliance with this ordinance or any order issued hereunder, or to protect the overall public health, safety, and welfare of the community, then the **CITY/TOWN** may seek issuance of a search warrant from any court of competent jurisdiction.

Section 7

REQUIREMENT TO PREVENT, CONTROL, AND REDUCE STORM WATER POLLUTANTS BY THE USE OF BEST MANAGEMENT PRACTICES

CITY/TOWN will adopt requirements identifying Best Management Practices for any activity, operation, or facility which may cause or contribute to pollution or contamination of storm water, the storm drain system, or waters of the U.S. The owner or operator of a commercial or industrial establishment shall provide, at their own expense, reasonable protection from accidental discharge of prohibited materials or other wastes into the municipal storm drain system or watercourses through the use of these structural and non-structural BMPs. Further, any person responsible for a property or premise, which is, or may be, the source of an illicit discharge, may be required to implement, at said person's expense, additional structural and non-structural BMPs to prevent the further discharge of pollutants to the municipal separate storm sewer system. Compliance with all terms and conditions of a valid NPDES permit authorizing the discharge of storm water associated with industrial activity, to the extent practicable, shall be deemed compliance with the provisions of this section. These BMPs shall be part of a STORM WATER pollution prevention plan (SWPP) as necessary for compliance with requirements of the NPDES permit.

Draft Ordinance

Section 8

WATERCOURSE PROTECTION

Every person owning property through which a watercourse passes, or such person's lessee, shall keep and maintain that part of the watercourse within the property free of trash, debris, excessive vegetation, and other obstacles that would pollute, contaminate, or significantly retard the flow of water through the watercourse. In addition, the owner or lessee shall maintain existing privately owned structures within or adjacent to a watercourse, so that such structures will not become a hazard to the use, function, or physical integrity of the watercourse.

Draft Ordinance

Section 9 NOTIFICATION OF SPILLS

Notwithstanding other requirements of law, as soon as any person responsible for a facility or operation, or responsible for emergency response for a facility or operation has information of any known or suspected release of materials which are resulting or may result in illegal discharges or pollutants discharging into storm water, the storm drain system, or water of the U.S. said person shall take all necessary steps to ensure the discovery, containment, and cleanup of such release. In the event of such a release of hazardous materials said person shall immediately notify emergency response agencies of the occurrence via emergency dispatch services. In the event of a release of non-hazardous materials, said person shall notify the **CITY/TOWN** in person or by phone or facsimile no later than the next business day. Notifications in person or by phone shall be confirmed by written notice addressed and mailed to the **CITY/TOWN** within three business days of the phone notice. If the discharge of prohibited materials emanates from a commercial or industrial establishment, the owner or operator of such establishment shall also retain an on-site written record of the discharge and the actions taken to prevent its recurrence. Such records shall be retained for at least three years.

Draft Ordinance

Section 10 ENFORCEMENT AND ABATEMENT

Whenever the **CITY/TOWN** finds that a person has violated a prohibition or failed to meet a requirement of this Ordinance, the **CITY/TOWN** may enforce the ordinance with escalating procedures.

Section 10.1 Notification; Enforcement Remedies.

- (a) Warning Notice: A warning notice of violation is the lowest level of formal response to a violation. It is a verbal or written response presented to the violator shortly after a violation has been identified and is intended for minor violations that would not cause significant harm to the environment.

- (b) Notification of Violation: Whenever the Official finds that any person is in violation of any provision of this ordinance, or any order issued hereunder, the Official or his agent may serve upon such person written notice of the violation requiring the removal of illicit discharges and immediate cessation improper disposal practices within ten (10) calendar days of the date of such notice. Compliance by written notice of violation to the responsible person may require without limitation:
 - 1. The performance of monitoring, analyses, and reporting;
 - 2. The abatement or remediation of storm water pollution or contamination hazards and the restoration of any affected property; and
 - 3. Payment of a fine to cover administrative and remediation costs; and
 - 4. The implementation of source control or treatment BMPs.

- (c) Compliance Order: Whenever abatement of a violation and/or restoration of affected property is not possible within ten (10) days, a compliance order may be issued to the violator. The order shall set forth a deadline within which such remediation or restoration must be completed. Said order shall further advise that, should the violator fail to remediate or restore within the established deadline, the work will be done by a designated governmental agency or a contractor and the expense thereof shall be charged to the violator.

Section 10.2 Appeal of Violation.

Any person receiving a Notice of Violation or Compliance Order may appeal the determination of the **CITY/TOWN**. The notice of appeal must be received within ten (10) days from the date of the Notice of Violation/Compliance Order. Hearing on the appeal before the appropriate authority or his/her designee shall take place within fifteen (15) days from the date of receipt of the notice of appeal. The decision of the municipal authority or their designee shall be final.

Draft Ordinance

Section 10.3 Enforcement Measures After Appeal.

If the violation has not been corrected pursuant to the requirements set forth in the Notice of Violation, or, in the event of an appeal, within thirty (30) days of the decision of the municipal authority upholding the decision of the **CITY/TOWN**, then representatives of the **CITY/TOWN** shall enter upon the subject private property and are authorized to take any and all measures necessary to abate the violation and/or restore the property. It shall be unlawful for any person, owner, agent or person in possession of any premises to refuse to allow the government agency or designated contractor to enter upon the premises for the purposes set forth above.

Section 10.4 Cost of Abatement of the Violation.

Within _____ days after abatement of the violation, the owner of the property will be notified of the cost of abatement, including administrative costs. The property owner may file a written protest objecting to the amount of the assessment within _____ days. If the amount due is not paid within a timely manner as determined by the decision of the municipal authority or by the expiration of the time in which to file an appeal, the charges shall become a special assessment against the property and shall constitute a lien on the property for the amount of the assessment.

Any person violating any of the provisions of this ordinance shall become liable to the city by reason of such violation. The liability shall be paid in not more than 12 equal payments. Interest at the rate of twelve (12) percent per annum shall be assessed on the balance beginning on the 1st day following discovery of the violation.

Section 10.5 Injunctive Relief.

It shall be unlawful for any person to violate any provision or fail to comply with any of the requirements of this Ordinance. If a person has violated or continues to violate the provisions of this ordinance, the **CITY/TOWN** may petition for a preliminary or permanent injunction restraining the person from activities which would create further violations or compelling the person to perform abatement or remediation of the violation.

Section 10.6 Compensatory Action.

In lieu of enforcement proceedings, penalties, and remedies authorized by this Ordinance, the **CITY/TOWN** may impose upon a violator alternative compensatory actions, such as storm drain stenciling, attendance at compliance workshops, creek cleanup, etc.

Draft Ordinance

Section 10.7 Violations Deemed a Public Nuisance.

In addition to the enforcement processes and penalties provided, any condition caused or permitted to exist in violation of any of the provisions of this Ordinance is a threat to public health, safety, and welfare, and is declared and deemed a nuisance, and may be summarily abated or restored at the violator's expense, and/or a civil action to abate, enjoin, or otherwise compel the cessation of such nuisance may be taken.

Section 10.8 Criminal Prosecution.

Any person that has violated or continues to violate this ordinance shall be liable to criminal prosecution to the fullest extent of the law, and shall be subject to a criminal penalty of \$500 dollars per violation per day and/or imprisonment for a period of time not to exceed one hundred and eighty (180) days.

The **CITY/TOWN** may recover all attorney's fees court costs and other expenses associated with enforcement of this ordinance, including sampling and monitoring expenses.

Section 10.9 Remedies Not Exclusive.

The remedies listed in this ordinance are not exclusive of any other remedies available under any applicable federal, state or local law and it is within the discretion of the **CITY/TOWN** to seek cumulative remedies.

Draft Ordinance

Section 11 MISCELLANEOUS

Section 11.1 Applicability.

This ordinance shall apply to all water entering the storm drain system generated on any developed and undeveloped lands unless explicitly exempted by a CITY/TOWN.

Section 11.2 Severability.

The provisions of this ordinance are hereby declared to be severable. If any provision, clause, sentence, or paragraph of this Ordinance or the application thereof to any person, establishment, or circumstances shall be held invalid, such invalidity shall not affect the other provisions or application of this Ordinance.

Section 11.3 Ultimate Responsibility.

The standards set forth herein and promulgated pursuant to this ordinance are minimum standards; therefore, this ordinance does not intend nor imply that compliance by any person will ensure that there will be no contamination, pollution, nor unauthorized discharge of pollutants.

Section 11.4 Effective Date.

This ordinance shall be published as required by law and shall become effective at _____ on _____.

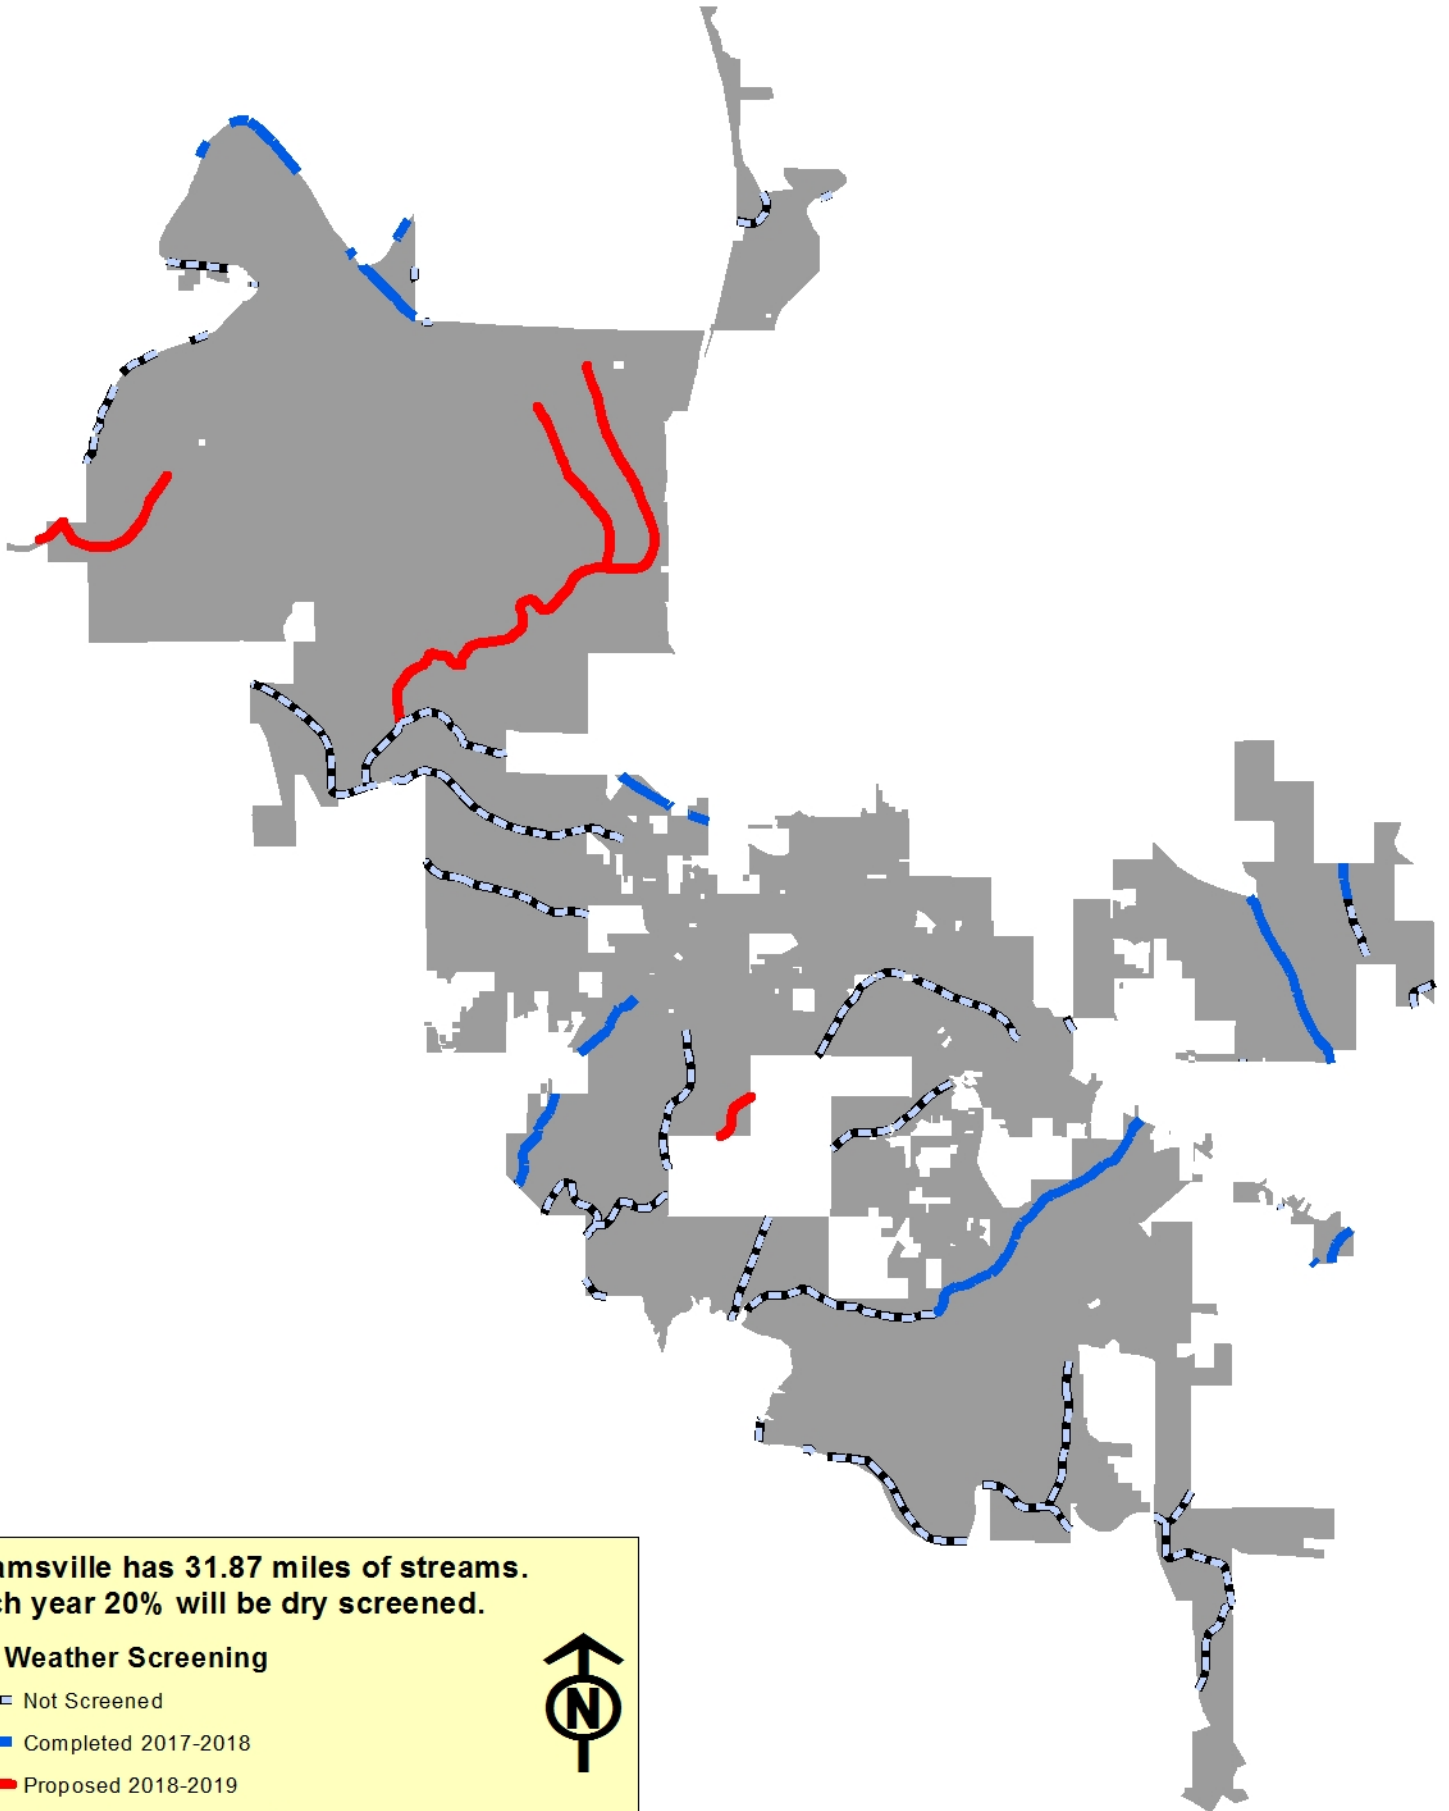

ADOPTED: This ____ day of _____, XXXX.

APPROVED: This ____ day of _____, XXXX.

Draft Ordinance

STORMWATER MANAGEMENT POST-CONSTRUCTION ORDINANCE

RECITALS

WHEREAS, the City of _____ operates under the requirements of the Alabama Department of Environmental Management (ADEM) National Pollutant Discharge Elimination System (NPDES) Permit; and

WHEREAS, this permit authorizes stormwater discharges from regulated small municipal separate storm sewer systems (MS4); and

WHEREAS, the City of _____ must be compliant with the ADEM NPDES Permit by developing, implementing, and enforcing a program to address post-construction stormwater management; and

WHEREAS, the City of _____ finds it necessary to enact an ordinance to address and enforce post-construction stormwater management standards on Qualifying Sites to prevent or minimize water quality impacts and ensure that the volume and velocity of pre-construction stormwater runoff is not significantly exceeded for the life of the property's use to the maximum extent practical (MEP).

NOW, THEREFORE BE IT ORDAINED by the City Council of the City of _____, Alabama, as follows:

Draft Ordinance

Section 1 DEFINITIONS

For the purposes of this ordinance, the following words and terms shall have the meaning assigned to them in this section.

Best Management Practices - (herein abbreviated as "BMP") - activities, prohibitions of practices, maintenance procedures and management practices designed to prevent or reduce the pollution of waters to the MS4. Best Management Practices also include treatment requirements, operating procedures and practices to control facility site runoff, spillage or leaks, sludge or waste disposal or drainage from raw material storage and construction sites.

Non-structural BMPs - Non-structural BMPs may include but not be limited to the following: preservation of open spaces and vegetation, establishment of conservation easements, establishment of buffers along streams and other waters, maintenance of vegetation, BMP inspection and maintenance, planning for future development or redevelopment.

Qualifying Site - Qualifying Site is any new development site or re-development site that results in a total land disturbance of one or more acres and sites that disturb less than one acre but are a part of a larger common development or sale that would disturb one or more acres.

Structural BMPs - Structural BMPs may include, but not be limited to the following: detention/ retention devices, check dams, drainage swales, lined ditches, infiltration basins, porous pavement, outlet protection, velocity dissipation devices, slope protection, constructed wetlands, rain gardens, catch basin inserts, vegetated filter strips, and rain barrels.

Draft Ordinance

Section 2 ADMINISTRATION

The municipal engineer for the City, the municipal official or employee who is a qualified credentialed professional, such other municipal official or municipal employee who has had sufficient experience dealing with BMP design to enable them to enforce the provisions of this ordinance, an individual or agency contracted to provide such service, shall be responsible, on behalf of the City, to enforce the provisions of this ordinance.

Draft Ordinance

Section 3 POST-CONSTRUCTION BMP DESIGN

Section 3.1 Design Standards.

The post-construction BMPs for qualifying sites, which may include a combination of structural BMPs and/or non-structural BMPs, must be designed to ensure that the volume and velocity of pre-construction stormwater runoff, to the maximum extent practicable, is not significantly exceeded.

The current Post Construction Stormwater Management Technical Memorandum (Addendum A) details acceptable design criteria meeting the requirement of the current NPDES Permit No. _____ and shall be the basis for the design and implementation of post- construction BMPs.

Section 3.2 Design References.

By reference in this Section, the City adopts the following as design references to meet the design standards:

- a) The latest version of the "Alabama Handbook for Erosion Control, Sedimentation Control and Stormwater Management on Construction Sites and Urban Areas", Volumes 1 and 2.
- b) The latest version of the "Low Impact Development Handbook for the State of Alabama".
- c) Any storm water design manual approved by the city that meets the design requirement of this ordinance.

Draft Ordinance

Section 4 APPLICATION REQUIREMENTS

As part of the Land Disturbance Application, all Qualifying Sites shall include the following components:

Section 4.1 Post-Construction BMP Design Description.

Procedures and strategies of the structural BMPs and/or non-structural BMPs that meet the design standards for Qualifying Sites found in Section 3.1 of this ordinance. Submittal to the City of a certified as-built of the BMPs and a letter of substantial compliance from the design engineer are required within 120 days of construction completion.

Section 4.2 Post-Construction BMP Inspection Plan Description.

Procedures and strategies that will address inspections of the BMPs to confirm proper function, require corrective actions to poorly functioning or inadequately maintained BMPs, and require record keeping of maintenance activities, inspections, and corrective actions. The City shall perform or require the performance of an inspection by the developer/ owner/ operator at least once per year. Records of these inspections shall be made available to ADEM upon request and copies shall be provided to the City on an annual basis. The minimum documentation requirements for inspections are as follows:

- a) Facility type
- b) Inspection date
- c) Name and signature of inspector
- d) Site location
- e) Owner information (name, address, phone number, fax, and email)
- f) Description of the storm water BMP condition that may include the quality of: vegetation and soils, inlet and outlet channels and structures, embankments, slopes, and safety benches; spillways, weirs, and other control structures; and sediment and debris accumulation in storage and forebay areas as well as in and around inlet and outlet structures;
- g) Photographic documentation of all critical storm water BMP components;
- h) Specific maintenance items or violations that need to be corrected by the owner/operator of the storm water control or BMP; and
- i) Maintenance agreements for long-term BMP operations and maintenance.

Draft Ordinance

Section 4.3 Post-Construction BMP Operation and Maintenance Plan Description.

Procedures and strategies that will address adequate long-term operation and maintenance of the BMPs. One or more of the following shall be applicable (as determined by the City) to establish the responsible party for long-term operation and maintenance. The document(s) shall be provided to the City for review. Upon approval, an executed copy shall be put on file in the _____ Department:

- a) The developer's signed statement accepting responsibility for maintenance until the maintenance responsibility is legally transferred to another part.
- b) Written conditions in the sales or lease agreement that require the recipient to assume responsibility for maintenance.
- c) Written conditions in project conditions, covenants, and restrictions for residential properties assigning maintenance responsibilities to a home owner's association or other appropriate group for maintenance of structural and treatment control management practices.
- d) Any other legally enforceable agreement that assigns permanent responsibility for maintenance.

Draft Ordinance

Section 5 ENFORCEMENT AND ABATEMENT

If a responsible party fails or refuses to meet the design, operation, or maintenance standards required by this ordinance, the City, after reasonable notice, may correct a violation of the design standards, operation, or maintenance needs by performing all necessary work to place the measures in proper working condition. In the event that the BMPs become a danger to public safety or public health, the City shall notify in writing the responsible party for changes to design, operation, maintenance, and repairs of the BMP. Upon receipt of that notice, the responsible party shall have 14 calendar days, or such additional time as the City shall determine to be reasonably necessary to complete the action, to make changes to design, operation, maintenance, and repairs of the measures in an approved manner. In the event that corrective action is not undertaken within that time, the City may take necessary corrective action. The cost of any action by the City under this Section shall be billed to the responsible party. If the responsible party refuses to pay the bill, the City is entitled to bring an action against the responsible party to pay, file a lien against the property, or both. Costs shall include interest, collection fees, and reasonable attorney fees.

Draft Ordinance

Section 6 MISCELLANEOUS

Section 6.1 Notices.

Whenever the City is required or permitted to:

- (a) give a notice to any party, such notice must be in writing; or
- (b) deliver a document to any party; such notice or document may be delivered by personal delivery, certified mail (return receipt requested), registered mail (return receipt requested) or a generally recognized overnight carrier, to the address of such party which is in the records of the City or is otherwise known to the City.

Section 6.2 References.

Whenever a Section is referred to in this ordinance, unless the context clearly indicates the contrary, such reference shall be to a section of this ordinance.

Section 6.3 Severability.

The provisions of this ordinance are severable. If any part of this ordinance is determined by a court of law to be invalid, unenforceable or unconstitutional, such determination shall not affect any other part of this ordinance.

Section 6.4 Captions.

The captions of Sections and sections are for the purpose of reference only, and such captions shall not affect the meaning of any provision of this ordinance.

Section 6.5 Ultimate Responsibility.

The standards set forth herein and promulgated pursuant to this ordinance are minimum standards; therefore, this ordinance does not intend nor imply that compliance by any person will ensure that there will be no contamination, pollution, nor unauthorized discharge of pollutants.

Draft Ordinance

Section 6.6 Effective Date.

This ordinance shall be published as required by law and shall become effective at _____ on _____.

ADOPTED: This ____ day of _____, XXXX.

APPROVED: This ____ day of _____, XXXX.

Mayor

Draft Ordinance

ADDENDUM A

SWMA MS4 Program

Post-Construction Stormwater Management Technical Memorandum

Overview

In 1990, the U.S. Environmental Protection Agency (EPA) promulgated regulations establishing Phase I of the National Pollutant Discharge Elimination Systems (NPDES) stormwater program. The Phase I program for municipal separate storm sewer systems (MS4s) require operators of “medium” and “large” MS4s that generally serve populations of 100,000 or greater to implement a stormwater management program as a means to control to the maximum extent practicable (MEP) polluted discharges from certain municipal, industrial and construction activities into the MS4.

The Alabama Department of Environmental Management (ADEM) presently has primary jurisdiction over permitting and enforcement of the Stormwater Program for Alabama. The City of _____ (City) was issued NPDES Permit Number ALS0000__ on **DATE**. This NPDES Permit became effective on **DATE** and will expire on **DATE**. The City is required to develop and implement a Stormwater Management Program (SWMP) in accordance with the NPDES Permit requirements.

In accordance with the NPDES Permit, the City is required to develop and implement a Post Construction Stormwater Program to address stormwater runoff from qualifying new development and re-development projects by **DATE**. This memorandum provides technical guidance regarding the City’s updated post construction stormwater management requirements in accordance with the City’s NPDES Permit.

Applicable Developments

The City’s updated post construction stormwater management requirements are only applicable to “Qualifying New Development or Redevelopment” projects as defined below:

Draft Ordinance

“Qualifying New Development and Redevelopment” means any site that results from the disturbance of one acre or more of land or the disturbance of less than one acre of land if part of a larger common plan of development or sale that is greater than one acre. Qualifying new development and redevelopment does not include land disturbances conducted by entities under the jurisdiction and supervision of the Alabama Public Service Commission.

Since stormwater detention and retention facilities are the primary Best Management Practices (BMPs) that have historically been used for post-construction stormwater management, this technical memorandum has been developed to address stormwater detention and retention facilities. However, this does not preclude the use of other generally accepted engineering practices.

Implementation

Effective **DATE**, all qualifying new development and redevelopment projects shall be designed in accordance with this technical memorandum.

Waiver Request

The City recognizes that there are existing project sites that have been constructed or previously approved, prior to the effective **DATE** of this technical memorandum, that may qualify for a waiver from the updated post construction stormwater management requirements. As a result, the City has developed an Existing Development, Post Construction Stormwater Management Waiver Request Form (Figure 1) to address existing project sites. In order for an existing project site to be considered for a waiver, the waiver request form shall be completed and submitted to the City for review and approval. If a waiver has been submitted for a development that has not been completed and the density of the development is increased and/or modified, the developer shall resubmit a waiver request for this development.

Water Quality Requirements

Post-construction stormwater runoff quality is an important component of the City's SWMP. In order to meet the requirements of the City's NPDES Permit, a Water Quality Volume (WQ_v) must be accounted for on each project site and BMPs must be utilized to store and treat the WQ_v. The required WQ_v is based upon the first 1.1 inches of rainfall that occurs on the project site. The WQ_v can be estimated as described below.

Draft Ordinance

$WQ_v = 1.1$ inches / acre of additional impervious area.

For example: An existing 12.5 acre site planned for re-development contains 3 acres of existing impervious area. The proposed development will contain 7 total acres of impervious area in the post-development condition. The required WQ_v shall be calculated as follows:

$$\begin{aligned} WQ_v &= 1.1 \text{ inches} * 4 \text{ acres of additional impervious area} \\ &= 1.1 \text{ inches} * (1 \text{ foot} / 12 \text{ inches}) * 4 \text{ acres} * (43,560 \text{ sq.ft.} / 1 \text{ acre}) \\ &= 15,972 \text{ cubic feet of storage required} \end{aligned}$$

The WQ_v that is required for each project site may be provided in multiple ways to allow greater flexibility during design. There are a number of post-construction BMPs such as detention ponds, retention ponds, bioretention swales, proprietary stormwater quality treatment devices, sand filters, etc. that may be utilized by the Owner and their Engineer-of-Record to meet the water quality requirements.

Low Impact Development (LID)

As an option for meeting the updated post-construction stormwater management requirements, the City encourages Owners and Developers to incorporate the use of low impact development (LID) practices into qualifying development and redevelopment projects. The latest version of the Alabama Low Impact Development is incorporated into this technical memorandum by reference.

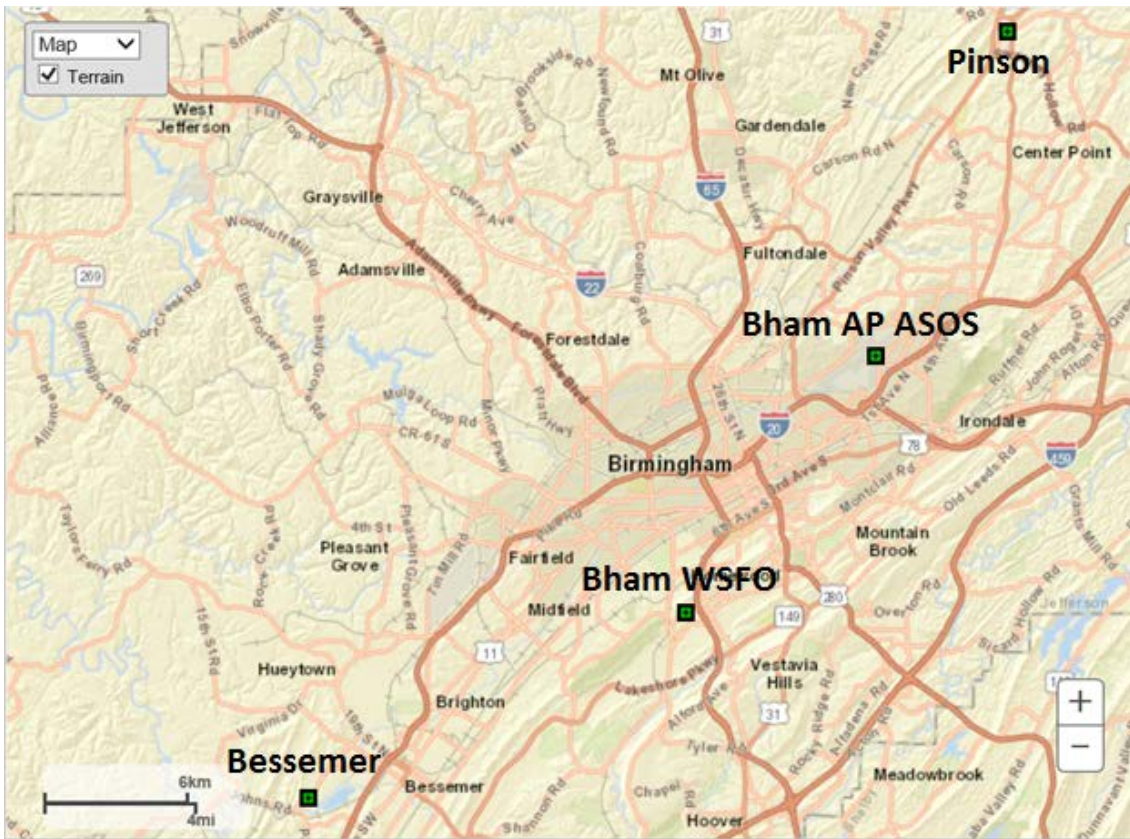

Design Standards

For detention and retention ponds, the calculation methodology shall utilize the National Resource Conservation Resources (NRCS) Urban Hydrology for Small Watersheds Technical Release 55 (TR-55) or equivalent. For the determination of pre-construction and post-construction stormwater runoff hydrology, the 24-hour rainfall depths from National Oceanic and Atmospheric Administration (NOAA) Atlas14, Volume 9, Version 2 included in Table 1 shall be used:

Draft Ordinance

Table 1. Design Storms

Storm Event (24 hour)	Rainfall (inches) (Bessemer)	Rainfall (inches) (Bham WSFO)	Rainfall (inches) (Bham AP ASOS)	Rainfall (inches) (Pinson)
2-year	4.09	4.1	4.12	4.11
5-year	4.97	4.99	5.02	4.99
10-Year	5.82	5.83	5.85	5.8
25-Year	7.18	7.15	7.13	7.02
100-Year	9.71	9.56	9.39	9.15

Draft Ordinance

As a part of the City's requirements for post-construction stormwater runoff management, all project sites shall be responsible for ensuring, to the MEP, that post-development runoff mimics pre-development hydrology for the 2-year, 5-year, 10-year, and 25-year rainfall depths listed in Table 1. All stormwater detention or retention facilities must be able to convey the peak flow rate associated with a 100-year, 24-hour storm event. The Owner and/or Developer shall ensure, to the MEP, that installation of post-construction BMPs shall not adversely impact and/or cause flooding of properties located upstream and downstream of post-construction BMPs.

Detention and Retention Ponds

As a part of this technical memorandum, two structural BMPs (detention and retention ponds) have been highlighted as design options to assist in meeting the post-construction stormwater management requirements of the City's NPDES permit. Both detention ponds and retention ponds are fairly simple to design, construct and maintain. However, other structural BMPs may be selected by the Owner and Engineer-of-Record for review and approval by the City and are welcomed to be incorporated into the overall stormwater management plan for each project site.

A Design Form, Detention / Retention Ponds (Figure 2) has been developed by the City to aid in the design, review, and approval of detention and retention facilities. The design form provides a standard format for the Engineer-of-Record to provide information concerning pre-development conditions, post-development conditions, pond outlet configurations, pond storage, and pond peak flow discharges. For a project that contains multiple detention facilities, the Engineer-of-Record may simply provide a Design Form for each facility. While a detention pond can be utilized to meet the stormwater management requirements, some type of filtration system is needed for a detention pond to meet the stormwater quality requirements. The filtration system must allow the volume of water associated with the WQ_v to drain slowly out of the pond, but should drain within a forty-eight (48) hour period. Figure 3 provides some basic examples of filtering systems that may be applicable to detention ponds.

As-Built Certification

As a part of the NPDES permit, the City must insure the BMPs that have been designed and approved are constructed and operated in accordance with their original design and intent. In an effort to confirm that the constructed BMPs meet the designer's intent, an As-Built Evaluation and Certification form (Figure 4) has been developed. It shall be the Owner's responsibility to have as-built information, such as pond volume, embankment size and elevations, invert size and elevations, and spillway elevations, field surveyed by a Professional Land

Draft Ordinance

Surveyor. It shall be the Engineer-of-Record's responsibility to utilize the field surveyed information to fill out the As-Built Evaluation and Certification Form. The Owner has two options for completing the As-Built Evaluation and Certification:

Option 1 The As-Built Evaluation and Certification form shall be submitted and approved by the City prior to the issuance of a Certificate of Occupancy (CO) and/or prior to the recording of the final subdivision plat.

Option 2 If the Owner would like to obtain a CO and/or record the final subdivision plat prior to the City's approval of the As-Built Evaluation and Certification form, the Owner may post a bond or other forms of surety acceptable to the City in the amount of 100% of the construction cost associated with post-construction stormwater management BMPs and the cost associated with the effort required to complete the As-Built Evaluation and Certification. The As-Built Evaluation and Certification form shall be submitted to the City within 120 days of receipt of a CO and/or recording of the final subdivision plat.

Annual Inspections

In order for post-construction BMPs to continue to function in accordance with their original design and installation, annual inspections are required by the City's NPDES permit. The Owner of the project is required to have these annual inspections performed and must then submit the required Annual Inspection Form (Figure 5) to the City. The Annual Inspection Form shall provide documentation concerning the condition of each facility in terms of vegetative cover, erosion that may be occurring, the condition of inlets into the pond and the pond outlet, embankment conditions and any maintenance required and/or performed. The City shall evaluate the documentation submitted to confirm that the stormwater management facilities are continuing to function as designed.

The Annual Inspection Form shall be submitted to the City each year by 30 September.

Draft Ordinance

Operation and Maintenance

It is the responsibility of the Owner to operate and maintain the stormwater management facility and/or BMPs in accordance with the original design intent and approval. If the original Owner or Developer has sold the project or passed ownership on to a Homeowner's Association, then it is the new Owner or HOA's responsibility to maintain the facility and provide any required inspection and maintenance.

Should maintenance be needed at a facility as a result of the Annual Inspection, the Owner shall provide the City documentation of the maintenance required and a schedule for completing all maintenance activities. Once all maintenance activities are completed, the Owner shall provide documentation to the City of the maintenance performed and that the BMP operates as it was designed.

A summary of maintenance activities shall be submitted to the City each year by 30 September. The summary shall cover the previous fiscal year beginning 1 October through 30 September.

Time	10:17
Facility Name	Norris Paving and Excavating
Does this facility have an NPDES permit?	No
Facility Type	Asphalt paving and
Municipal Business License #	12435
Facility Street Address	3448 Forest dale Bend Road Adamsville
Facility Phone Number	2056745947
Facility Contact Name	Lucas Norris
Facility Contact Title	Owner

Spill Training and Emergency Information

Written Spill SOP program?	Yes
Employees trained on cleanup measures?	Yes
If trained, how?	Verbally
If trained, how often?	Upon hire
MSDS's on file and available?	Yes
If a SMALL spill occurs, it is cleaned up with	Cat litter, Oil-Dri
If a LARGE spill occurs	Berms are placed around it

MISCELLANEOUS

Waste containers provided and used?	Yes
What kind of container?	Garbage can(s)
How often is it/are they emptied?	Weekly
Overall cleanliness	Clean (vey little un-cleaned spills and/or un-cleaned surfaces)
Are there any other potentially hazardous items not already adressed?	Yes
If yes, describe: what/where they are stored (including if bermed around and covered if outside)/what they are stored in/quantity	4,500 metal gallon on road diesel 1,800 metal gallon off road diesel, 5-55 gallon metal buckets of new oil, 2- 5 gallon plastic buckets of hydraulic fluid. 1 - 240 gallon plastic tank of old used oil that is pickup as needed

FAIRFIELD FIRE DEPARTMENT

5231 COURT B
FAIRFIELD, AL 35064

Attention: Fire Department or District Administrator

A requirement of the National Pollution Discharge Elimination System (NPDES) Stormwater permit is for the inspection of businesses that either discharge a liquid into the nearest waterbody or have the potential to discharge liquids into the municipal separate storm sewer systems (MS4). A discharge into the MS4 can potentially have adverse effect on nearby waterbodies if a leak occurs. In accordance with ADEM, one model of inspection that would comply with this requirement is the Pre-Fire Inspection, or similar inspections, completed by fire departments to document important fire/spill hazards and building layouts.

Pre-Fire Inspections or similar inspections have been completed on existing business properties and will be performed on future business properties.

By completing the information below you acknowledge the above statement is true and accurate to the best of your knowledge:

Name of
Municipality/District: City of Fairfield

William J. Ross (Fire Chief)

Overall cleanliness	Very clean (no un-cleaned spills and/or un-cleaned surfaces)
Are there any other potentially hazardous items not already adressed?	Yes
If yes, describe: what/where they are stored (including if bermed around and covered if outside)/what they are stored in/quantity	6 cases of new Formaldehyde stored in 16oz plastic bottles.
General comments/items of concern not mentioned	They have to wash all blood and formaldehyde down 1 drain that runs to a 1,000 gallon septic tank that gets pumped out every 2 weeks by a hazardous waste company and EVERY EMPTY 16oz plastic Formaldehyde bottle has to go in a special red plastic container and then it is picked up by Stericycle, every 2 weeks.

Updated	2018-08-31 12:07:40 EDT by Scott Hofer
Location	33.46176, -86.812651

General Info

Inspector	Scott Hofer
Date	2018-07-17
Time	16:45
Facility Name	Monarch Cleaners
Facility Type	Dry Cleaners
Municipal Business License #	1287
Facility Street Address	903 Broadway Street Homewood , Alabama 35209
Facility Phone Number	2058797882
Facility Contact Name	Mark Diciara
Facility Contact Title	Owner
Waste containers provided and used?	Yes
What kind of container?	Don't have own garbage. Share garbage with next door business
How often is it/are they emptied?	Weekly

Spill Training and Emergency Information

Written Spill SOP program?	No
Employees trained on cleanup measures?	Yes
If trained, how?	Verbally
If trained, how often?	Upon hire
MSDS's on file and available?	Yes
If a SMALL spill occurs, it is cleaned up with	Unknown. The machine is sealed
If a LARGE spill occurs	Unknown. Never had a large spill

Dry Cleaner

Is cleaning done onsite or is this a drop off location only?	Cleaning performed onsite
--	---------------------------

Onsite

What chemical is used/stored?	Kwik Dri 66 (unknown chemical makeup)
-------------------------------	---------------------------------------

Chemicals

Where is the chemical being stored?	Inside
What kind of container is the chemical being stored in?	Inside machine
What size container is the chemical being stored in (gallons)?	55
How many containers?	1

MISCELLANEOUS

Overall cleanliness	Clean (vey little un-cleaned spills and/or un-cleaned surfaces)
---------------------	---

Are there any other potentially hazardous items not already addressed?

No

General comments/items of concern not mentioned

Doesn't store product on site. Has a company that comes and refills the machine when needed.

Written Spill SOP program?	No
Employees trained on cleanup measures?	Yes
If trained, how?	Verbally
If trained, how often?	Upon hire
MSDS's on file and available?	Yes
If a SMALL spill occurs, it is cleaned up with	Pig Mat, Oil-Dri
If a LARGE spill occurs	The fire department is contacted

Maintenance Center

What fluids are being used/stored?	New oil, Used oil, New antifreeze, Used antifreeze, Automatic Transmission Fluid, Brake cleaner, Brake Fluid, Wiper fluid
------------------------------------	---

New Oil

Where is the new oil being stored?	Inside
What kind of container is the new oil being stored in?	Metal drum
What size container is the new oil being stored in (gallons)?	55
How many containers?	1
Comments	Also quarts and cases

Used Oil

Where is the used oil being stored?	Inside
What fluids are also stored in container?	Used Transmission Oil
What kind of container is the used oil being stored in?	Metal drum
What size container is the used oil being stored in (gallons)?	385
How many containers?	1

New Antifreeze

Where is the new antifreeze being stored?	Inside
What kind of container is the new antifreeze being stored in?	Plastic drum
What size container is the new antifreeze being stored in (gallons)?	1 gallon
How many containers?	6

Used Antifreeze

Where is the used antifreeze being stored?	Inside
What kind of container is the used antifreeze being stored in?	Metal drum
What size container is the used antifreeze being stored in (gallons)?	55
How many containers?	2

Automatic Transmission Fluid

Where is the new transmission fluid being stored?	Inside
What kind of container is the new transmission oil being stored in?	Plastic drum
What size container is the new transmission fluid being stored in (gallons)?	1 quart
How many containers?	6
Is used transmission oil mixed in with used oil?	Yes

Brake Cleaner

Where is the new brake cleaner being stored?	Inside
What kind of container is the brake cleaner being stored in?	Aerosol
What size container is the brake cleaner being stored in (gallons)?	10 ounces

Brake Fluid

Where is the new brake fluid being stored?	Inside
What kind of container is the brake fluid being stored in?	Metal drum
What size container is the brake fluid being stored in (gallons)?	1 liter
How many containers?	10
Is used brake fluid mixed in with used oil?	Yes

Wiper Fluid

Where is the new wiper fluid stored?	Inside
What kind of container is the new wiper fluid being stored in?	Plastic drum
How many containers?	6
Comments	1 gallon containers

MISCELLANEOUS

Waste containers provided and used?	Yes
What kind of container?	Dumpster(s)
How often is it/are they emptied?	Weekly
Overall cleanliness	Clean (vey little un-cleaned spills and/or un-cleaned surfaces)
Are there any other potentially hazardous items not already adressed?	Yes
If yes, describe: what/where they are stored (including if bermed around and covered if outside)/what they are stored in/quantity	Use ZEP but mostly Dawn dish detergent

Facility Street Address	144 Citation Ct Homewood, AL 35209
Facility Phone Number	2059454991
Facility Contact Name	Butch
Facility Contact Title	Service Manager

Spill Training and Emergency Information

Written Spill SOP program?	Yes
Employees trained on cleanup measures?	Yes
If trained, how?	Verbally
If trained, how often?	Upon hire
MSDS's on file and available?	Yes
If a SMALL spill occurs, it is cleaned up with	Cat litter, Oil-Dri, By mop
If a LARGE spill occurs	Berms are placed around it

Maintenance Center

What fluids are being used/stored?	New oil, Used oil, EP-Greases
------------------------------------	-------------------------------

New Oil

Where is the new oil being stored?	Inside
What kind of container is the new oil being stored in?	Metal drum
What size container is the new oil being stored in (gallons)?	55
How many containers?	7

Used Oil

Where is the used oil being stored?	Inside
What fluids are also stored in container?	Used Transmission Oil
What size container is the used oil being stored in (gallons)?	240
How many containers?	2

MISCELLANEOUS

Waste containers provided and used?	Yes
What kind of container?	Dumpster(s)
How often is it/are they emptied?	Bi-Weekly
Overall cleanliness	Clean (vey little un-cleaned spills and/or un-cleaned surfaces)
Are there any other potentially hazardous items not already addressed?	Yes
If yes, describe: what/where they are stored (including if bermed around and covered if outside)/what they are stored in/quantity	Inside and I put all the sizes in the comments below
General comments/items of concern not mentioned	Stewart's also has used GREASE that they store onsite and sale. They have 16-500 gallon metal containers, 72- 5 gallon plastic buckets, and 28- 3 gallon plastic buckets of grease.

General Info

Inspector	Scott Hofer
Date	2018-07-13
Time	13:39
Facility Name	Pep Boys
Facility Type	Mechanic
Municipal Business License #	10231
Facility Street Address	804 Green Springs Hwy Homewood, AL 35209
Facility Phone Number	2059481233
Facility Contact Name	Joey Smith
Facility Contact Title	Service Manager
Waste containers provided and used?	Yes
What kind of container?	Dumpster(s)
How often is it/are they emptied?	Weekly

Spill Training and Emergency Information

Written Spill SOP program?	No
Employees trained on cleanup measures?	Yes
If trained, how?	Video instructions
If trained, how often?	Monthly
MSDS's on file and available?	Unknown
If a SMALL spill occurs, it is cleaned up with	Oil-Dri
If a LARGE spill occurs	The fire department is contacted

Maintenance Center

What fluids are being used/stored?	New oil, Used oil, New antifreeze, Used antifreeze, Brake cleaner, Wiper fluid
------------------------------------	--

New Oil

Where is the new oil being stored?	Inside
What kind of container is the new oil being stored in?	Metal drum
What size container is the new oil being stored in (gallons)?	250
How many containers?	1

Used Oil

Where is the used oil being stored?	Inside
What kind of container is the used oil being stored in?	Metal drum
What size container is the used oil being stored in (gallons)?	150

How many containers? 2

New Antifreeze

Where is the new antifreeze being stored? Inside

What kind of container is the new antifreeze being stored in? From retail floor

What size container is the new antifreeze being stored in (gallons)? Inside

Used Antifreeze

Where is the used antifreeze being stored? Inside

What kind of container is the used antifreeze being stored in? Metal drum

What size container is the used antifreeze being stored in (gallons)? 150

How many containers? 1

MISCELLANEOUS

Overall cleanliness Clean (vey little un-cleaned spills and/or un-cleaned surfaces)

Are there any other potentially hazardous items not already adressed? No

General Info

Inspector	Drew Hubbard, Juwan Murphy
Date	2018-08-23
Time	12:54
Facility Name	The Mercedes Man
Does this facility have an NPDES permit?	No
Facility Type	Mechanic
Municipal Business License #	3407
Facility Street Address	116 Baker Ave Hueytown, AL 35023
Facility Phone Number	2059148177
Facility Contact Name	April
Facility Contact Title	Owner

Spill Training and Emergency Information

Written Spill SOP program?	Yes
Employees trained on cleanup measures?	Yes
If trained, how?	Verbally
If trained, how often?	Upon hire
MSDS's on file and available?	Yes
If a SMALL spill occurs, it is cleaned up with	Cat litter, Oil-Dri
If a LARGE spill occurs	Berms are placed around it

Maintenance Center

What fluids are being used/stored?	New oil, Used oil
------------------------------------	-------------------

New Oil

Where is the new oil being stored?	Inside
What kind of container is the new oil being stored in?	Metal drum
What size container is the new oil being stored in (gallons)?	55
How many containers?	2

Used Oil

Where is the used oil being stored?	Outside
What fluids are also stored in container?	Used Gear Oil
What kind of container is the used oil being stored in?	Plastic drum
What size container is the used oil being stored in (gallons)?	250
How many containers?	1

Is there a berm around it?	No
Is it covered?	No

MISCELLANEOUS

Waste containers provided and used?	Yes
What kind of container?	Dumpster(s)
How often is it/are they emptied?	Weekly
Overall cleanliness	Clean (vey little un-cleaned spills and/or un-cleaned surfaces)
Are there any other potentially hazardous items not already adressed?	No

Updated	2018-08-22 17:44:34 UTC by Drew Hubbard
Location	33.4578126237209, -86.9571451272397

General Info

Inspector	Drew Hubbard
Date	2018-08-22
Time	12:29
Facility Name	Express Oil Change
Does this facility have an NPDES permit?	No
Facility Type	Mechanic
Municipal Business License #	1300
Facility Street Address	600 Allison Bonnett Memorial Dr Hueytown, AL 35061
Facility Phone Number	2057444141
Facility Contact Name	James
Facility Contact Title	General Manager

Spill Training and Emergency Information

Written Spill SOP program?	Yes
Employees trained on cleanup measures?	Yes
If trained, how?	Verbally
If trained, how often?	Upon hire
MSDS's on file and available?	Yes
If a SMALL spill occurs, it is cleaned up with	Cat litter, Oil-Dri
If a LARGE spill occurs	Berms are placed around it

Maintenance Center

What fluids are being used/stored?	New oil, Used oil, Used antifreeze, Manual Transmission Fluid
------------------------------------	---

New Oil

Where is the new oil being stored?	Inside
What kind of container is the new oil being stored in?	Metal drum
What size container is the new oil being stored in (gallons)?	3-250 gal 2-500gal
How many containers?	5

Used Oil

Where is the used oil being stored?	Inside
What fluids are also stored in container?	Used Gear Oil
What kind of container is the used oil being stored in?	Metal drum
What size container is the used oil being stored in (gallons)?	2-500 gallon
How many containers?	2

Used Antifreeze

Where is the used antifreeze being stored?	Outside
What kind of container is the used antifreeze being stored in?	Plastic drum
What size container is the used antifreeze being stored in (gallons)?	240
How many containers?	1
Is there a berm around it?	No
Is it covered?	No

Manual Transmission Fluid

Where is the new gear oil being stored?	Inside
What kind of container is the gear oil being stored in?	Metal drum
What size container is the gear oil being stored in (gallons)?	55
How many containers?	9
Is used gear oil mixed in with used oil?	Yes

MISCELLANEOUS

Waste containers provided and used?	Yes
What kind of container?	Dumpster(s)
How often is it/are they emptied?	Weekly
Overall cleanliness	Very clean (no un-cleaned spills and/or un-cleaned surfaces)
Are there any other potentially hazardous items not already addressed?	No

What kind of container is the new oil being stored in?	Metal drum
What size container is the new oil being stored in (gallons)?	2-280 1-500
How many containers?	3

Used Oil

Where is the used oil being stored?	Inside
What kind of container is the used oil being stored in?	Plastic drum
What size container is the used oil being stored in (gallons)?	160
How many containers?	1

Car Wash

Car wash type?	Hand Wash
Is the used water processed through a filtration system?	No
Used water drains to where?	Unknown
What fluids are being used/stored?	Soap, Wax, Protectant

Soap

Where is the soap being stored?	Inside
What kind of container is the soap being stored in?	5 gallon plastic buckets
What size container is the soap being stored in (gallons)?	5
How many containers?	3

Degreaser

Where is the degreaser being stored?	Inside
What kind of container is the degreaser being stored in?	Plastic drum
What size container is the degreaser being stored in (gallons)?	5
How many containers?	2

Wax

Where is the wax being stored?	Inside
What kind of container is the wax being stored in?	Plastic drum
What size container is the wax being stored in (gallons)?	3
How many containers?	6

Protectant

Where is the protectant being stored?	Inside
What kind of container is the protectant being stored in?	Plastic drum
What size container is the protectant being stored in (gallons)?	3
How many containers?	6

MISCELLANEOUS

Overall cleanliness	Very clean (no un-cleaned spills and/or un-cleaned surfaces)
Are there any other potentially hazardous items not already addressed?	No

Automotive Dealer/Auto Body Shop

Is there a paint center?	No
Is there a maintenance center?	Yes
Is there a car wash?	Yes
Are there any gas pumps onsite?	No

Maintenance Center

What fluids are being used/stored?	New oil, Used oil, Used antifreeze
------------------------------------	------------------------------------

New Oil

Where is the new oil being stored?	Outside
What kind of container is the new oil being stored in?	Metal drum
What size container is the new oil being stored in (gallons)?	One 1000, one 500
How many containers?	2

Is there a berm around it?	Yes
Is it covered?	Yes

Used Oil

Where is the used oil being stored?	Outside
What kind of container is the used oil being stored in?	Metal drum
What size container is the used oil being stored in (gallons)?	1000
How many containers?	1
Is there a berm around it?	Yes
Is it covered?	Yes

Used Antifreeze

Where is the used antifreeze being stored?	Outside
What kind of container is the used antifreeze being stored in?	Metal drum
What size container is the used antifreeze being stored in (gallons)?	500
How many containers?	1
Is there a berm around it?	Yes
Is it covered?	Yes

Car Wash

Car wash type?	Drive-through
Is the used water processed through a filtration system?	Yes
Used water drains to where?	Septic tank
What fluids are being used/stored?	Soap, Degreaser

Soap

Where is the soap being stored?	Inside
What kind of container is the soap being stored in?	Plastic drum
What size container is the soap being stored in (gallons)?	55
How many containers?	1

Degreaser

Where is the degreaser being stored?	Inside
What kind of container is the degreaser being stored in?	Plastic drum
What size container is the degreaser being stored in (gallons)?	55
How many containers?	1
Is there a berm around it?	No
Is it covered?	No

MISCELLANEOUS

Overall cleanliness	Very clean (no un-cleaned spills and/or un-cleaned surfaces)
---------------------	--

Are there any other potentially hazardous items not already addressed? No

Facility Phone Number	2058223208
Facility Contact Name	Mario Marr
Facility Contact Title	General Manager

Spill Training and Emergency Information

Written Spill SOP program?	No
Employees trained on cleanup measures?	Yes
If trained, how?	Verbally
If trained, how often?	Upon hire
MSDS's on file and available?	Unknown
If a SMALL spill occurs, it is cleaned up with	Oil-Dri, By mop
If a LARGE spill occurs	The fire department is contacted, The police department is contacted

Maintenance Center

What fluids are being used/stored?	New oil, Used oil, Used antifreeze
------------------------------------	------------------------------------

New Oil

Where is the new oil being stored?	Inside
What kind of container is the new oil being stored in?	Other
Comments	15-5 gallons, cardboard box, inside 1-250 gallons, metal, inside

Used Oil

Where is the used oil being stored?	Outside
What kind of container is the used oil being stored in?	Metal drum
What size container is the used oil being stored in (gallons)?	250
How many containers?	1
Is there a berm around it?	No
Is it covered?	No

Used Antifreeze

Where is the used antifreeze being stored?	Inside
What kind of container is the used antifreeze being stored in?	Metal drum
What size container is the used antifreeze being stored in (gallons)?	55
How many containers?	1

MISCELLANEOUS

Waste containers provided and used?	Yes
What kind of container?	Dumpster(s)
How often is it/are they emptied?	Bi-monthly
Overall cleanliness	Clean (vey little un-cleaned spills and/or un-cleaned surfaces)
Are there any other potentially hazardous items not already adressed?	No

Analytical Data Report

Client: **ABC Coke**
PO Box 10246
Birmingham, AL 35202

Attention: Mr. David Vance

Project Name: **001 Chronic Toxicity – November 2017**

Date: December 13, 2017

Primary Data Review by:

Courtney Snow
Project Manager
Laboratory Resources & Solutions, Inc. (LRS)
csnow@lab-resource.com

- * Unless otherwise noted, all analyses on this report performed at ERA, 2975 Brown Court, Auburn, AL 36830.
- * These results relate only to the items tested. This report may only be reproduced in full.
- * Local support services for this project are provided by Laboratory Resources & Solutions, Inc. (LRS). All questions regarding this report should be directed to LRS, Inc.

ALABAMA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
TOXICITY TEST REPORT SUMMARY

1. GENERAL:

NPDES PERMIT NO.: AL0003417 DSN: 001 COUNTY: Jefferson
 Permittee: ABC Coke, Inc.
 Facility Name: ABC Coke WWTP
 Agent Submitting Report: Mr. Jeff McCord
 Lab Conducting Toxicity Test(s): ERA, 2975 Brown Ct., Auburn, AL 36830
 Months To Test: Monthly
 This Report for Toxicity Test(s) Required for the Month of: Nov
 Scheduled Test(s): Yes No Accelerated Test(s): Yes No
 Accelerated Test Number of For Failed Scheduled Test Date:
 Test Type Required: -Hr Acute Screening: -Hr Acute Definitive:
 Short-term Chronic Screening: Short-term Chronic Definitive:

Test Organism: Ceriodaphnia dubiaTest Organism: Pimephales promelas

Analytical Data Report

Client: **ABC Coke**
PO Box 10246
Birmingham, AL 35202

Attention: Mr. David Vance

Project Name: **001 Chronic Toxicity – January 2018**

Date: February 05, 2018

Primary Data Review by:

Courtney Snow

Courtney Snow
Project Manager
Laboratory Resources & Solutions, Inc. (LRS)
csnow@lab-resource.com

* Unless otherwise noted, all analyses on this report performed at ERA, 2975 Brown Court, Auburn, AL 36830.

* These results relate only to the items tested. This report may only be reproduced in full.

* Local support services for this project are provided by Laboratory Resources & Solutions, Inc. (LRS). All questions regarding this report should be directed to LRS, Inc.

ALABAMA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
TOXICITY TEST REPORT SUMMARY

1. GENERAL:

NPDES PERMIT NO.: AL0003417 DSN: 001 COUNTY: Jefferson
 Permittee: ABC Coke, Inc.
 Facility Name: ABC Coke WWTP
 Agent Submitting Report: Mr. Jeff McCord
 Lab Conducting Toxicity Test(s): ERA, 2975 Brown Ct., Auburn, AL 36830
 Months To Test: Monthly
 This Report for Toxicity Test(s) Required for the Month of: Jan
 Scheduled Test(s): Yes No Accelerated Test(s): Yes No
 Accelerated Test Number of For Failed Scheduled Test Date:
 Test Type Required: -Hr Acute Screening: -Hr Acute Definitive:
 Short-term Chronic Screening: Short-term Chronic Definitive:

Test Organism: Ceriodaphnia dubia Test Organism: Pimephales promelas

Sam No.	Date/Time Start	Date/Time Ended	Control	Date/Time Start	Date/Time Ended	Control

Analytical Data Report

Client: **ABC Coke**
PO Box 10246
Birmingham, AL 35202

Attention: Mr. David Vance

Project Name: **001 Chronic Toxicity – March 2018**

Date: April 10, 2018

Primary Data Review by:

Courtney Snow

Courtney Snow
Project Manager
Laboratory Resources & Solutions, Inc. (LRS)
csnow@lab-resource.com

* Unless otherwise noted, all analyses on this report performed at ERA, 2975 Brown Court, Auburn, AL 36830.

* These results relate only to the items tested. This report may only be reproduced in full.

* Local support services for this project are provided by Laboratory Resources & Solutions, Inc. (LRS). All questions regarding this report should be directed to LRS, Inc.

**ALABAMA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
TOXICITY TEST REPORT SUMMARY**

1. GENERAL:

NPDES PERMIT NO.: AL0003417 DSN: 001 COUNTY: Jefferson
 Permittee: ABC Coke, Inc.
 Facility Name: ABC Coke, Inc.
 Agent Submitting Report: : Mr. Jeff McCord
 Lab Conducting Toxicity Test(s): ERA, 2975 Brown Court, Auburn, AL 36830
 Months To Test: Monthly
 This Report for Toxicity Test(s) Required for the Month of: March
 Scheduled Test(s): Yes X No Accelerated Test(s): Yes No X
 Accelerated Test Number of For Failed Scheduled Test Date:
 Test Type Required: 48 -Hr Acute Screening: -Hr Acute Definitive:
 Short-term Chronic Screening: X Short-term Chronic Definitive:

Test Organism: Ceriodaphnia dubia Test Organism: Pimephales promelas

Sam	Date/Time Start	Date/Time Ended	Control	Date/Time Start	Date/Time Ended	Control
No.	MM/DD/YY HH:MM	MM/DD/YY HH:MM	Valid	MM/DD/YY HH:MM	MM/DD/YY HH:MM	Valid

Analytical Data Report

Client: **ABC Coke**
PO Box 10246
Birmingham, AL 35202

Attention: Mr. David Vance

Project Name: **001 Chronic Toxicity – May 2018**

Date: June 13, 2018

Primary Data Review by:

Courtney Snow
Project Manager
Laboratory Resources & Solutions, Inc. (LRS)
csnow@lab-resource.com

- * Unless otherwise noted, all analyses on this report performed at ERA, 2975 Brown Court, Auburn, AL 36830.
- * These results relate only to the items tested. This report may only be reproduced in full.
- * Local support services for this project are provided by Laboratory Resources & Solutions, Inc. (LRS). All questions regarding this report should be directed to LRS, Inc.

ALABAMA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
TOXICITY TEST REPORT SUMMARY

1. GENERAL:

NPDES PERMIT NO.: AL0003417 DSN: 001 COUNTY: Jefferson
 Permittee: ABC Coke, Inc.
 Facility Name: ABC Coke, Inc.
 Agent Submitting Report: : Mr. Jeff McCord
 Lab Conducting Toxicity Test(s): ERA, 2975 Brown Court, Auburn, AL 36830
 Months To Test: Monthly
 This Report for Toxicity Test(s) Required for the Month of: May
 Scheduled Test(s): Yes X No _____ Accelerated Test(s): Yes _____ No X
 Accelerated Test Number _____ of _____ For Failed Scheduled Test Date:
 Test Type Required: 48 -Hr Acute Screening: _____ -Hr Acute Definitive:
 Short-term Chronic Screening: X Short-term Chronic Definitive:

Test Organism: Ceriodaphnia dubia Test Organism: Pimephales promelas

 Receiving Water: Five Mile Creek
 Design Flow: 0.406 (MGD)

Sample Id.	Sample(s) Collected MM/DD/YY HHMM - MM/DD/YY HHMM	Arrival Temp. °C.	Used in Test(s) MM/DD/YY - MM/DD/YY
1	5/13/18 0730 - 5/14/18 0730	2.6	5/15/18 - 5/16/18
2	5/15/18 0730 - 5/16/18 0730	2.4	5/17/18 - 5/18/18
3	5/17/18 0730 - 5/18/18 0730	2.6	5/19/18 - 5/21/18

5. CONTROL/DILUTION WATER:

Type	Prepared MM/DD/YY	Begin Use MM/DD/YY	Initial Water Chemistries				
			Hard.	Alk.	pH	Cond.	@ °C.
MHRW	05/14/18	05/15/18	94	59	7.58	302	@ 25
MHRW	05/15/18	05/16/18	100	59	7.43	305	@ 25
MHRW	05/16/18	05/17/18	88	61	7.51	312	@ 25
MHRW	05/16/18	05/18/18	94	61	7.40	305	@ 25
MHRW	05/16/18	05/19/18	96	59	7.48	304	@ 25
MHRW	05/20/18	05/21/18	92	59	7.46	306	@ 25

6. TOXICITY TEST INFORMATION:

Test Species	Organism Age	Organism Source	Test Solution Concentrations (%)				
P.p.	1-2 days	Florida Bioassay Supply	16%				
C.d.	0-5 hrs	ERA	16%				

Test Species	Test Vessel Type	Vessel Vol. (mL)	Solution Vol. (mL)	Org./Test Vessel	Replicates Per Conc.
P.p.	plastic beaker	500	250	10	2
C.d.	plastic beaker	25	20	5	4

Test Species	Temp. Range (°C.)	D.O. Range (mg/L)	pH Range (su)	Light Intensity Average (ft.-c.)
P.p.	24.3 - 25.8	6.0 - 9.7	6.74 - 7.46	75
C.d.	24.3 - 25.8	7.5 - 9.7	7.01 - 7.59	75

7. FEEDING:

Not Fed: ___ Fed Daily: X Fed Irregular: ___ (Explain in Comments Below)
 Brine Shrimp: Fed 0.15 g Suspension of Newly Hatched Larvae 2 Times Daily.
 YCT: Fed 0.130 mL Suspension Containing 1.86 g/L TS Daily.
 Algae: Fed 0.130 mL Suspension Containing 3.0 x 10⁷ Algal Cells/mL Daily.
COMMENTS:

8. REFERENCE TOXICANT TESTS:

TOXICANT: Sodium Chloride SOURCE: Fisher Scientific CAS#: 7647-14-5
 Solution Concentration Unit: mg/L g/L % Other (specify)

Chronic:

Test Org.	Test Date	Control Water	Reference Test Solution Concentrations (Control to Highest Conc.)					
P.p.	5/01/18- 5/08/18	MHRW	0	2.0	4.0	6.0	8.0	10.0
C.d.	5/01/18- 5/08/18	MHRW	0	0.5	1.0	1.5	2.0	2.5

Test Org.	Endpoint	NOEC (g/L)	CUSUM Chart Control Limit	NUMBER (N)
P.p.	Survival	4.0	2.0 - 4.0	20
P.p.	Growth	4.0	2.0 - 4.0	20
C.d.	Survival	1.5	0.5 - 1.5	20
C.d.	Reproduction	0.5	0.25- 1.0	20

Raw Data on File With ADEM Toxics Unit

9. TEST CONDITION VARIABILITY:

9.A. Deviations From Standard Test Conditions:

None

9.B. Test Solution Manipulations or Test Modifications:

None

10. REQUIRED REPORT ATTACHMENTS:

Attach Copies Of Chain-of-Custody Forms, Reference Toxicant Tests, And Raw Data (Bench Sheets) Pertaining To Physical, Chemical, And Biological Measurements For All Tests. Include Suspended, Interrupted, or Discontinued Toxicity Tests Data.

11.C CHRONIC SCREENING TOXICITY TESTS RESULTS (Freshwater):

TEST ORGANISM: Ceriodaphnia dubia

Were Neonates Used to Begin the Test Within 8 hours of the same age?: Yes

Did 60% of the CONTROL Females Produce Their Third Brood? YES: NO:

SURVIVAL

CHRONIC TOXICITY INDICATED: YES NO

NO SURVIVAL STATISTICAL ANALYSIS NECESSARY:

CONTROL(%) 24h 100 48h 100 End 100 EFFLUENT(%): 24h 100 48h 100 End 100

Analytical Data Report

Client: **ABC Coke**
 PO Box 10246
 Birmingham, AL 35202

Attention: Mr. David Vance

Project Name: **001 Chronic Toxicity – July 2018**

Date: August 14, 2018

Primary Data Review by:

Courtney Snow
Project Manager
Laboratory Resources & Solutions, Inc. (LRS)
csnow@lab-resource.com

* Unless otherwise noted, all analyses on this report performed at ERA, 2975 Brown Court, Auburn, AL 36830.

* These results relate only to the items tested. This report may only be reproduced in full.

* Local support services for this project are provided by Laboratory Resources & Solutions, Inc. (LRS). All questions regarding this report should be directed to LRS, Inc.

ALABAMA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
TOXICITY TEST REPORT SUMMARY

1. GENERAL:

NPDES PERMIT NO.: AL0003417 DSN: 001 COUNTY: Jefferson
 Permittee: ABC Coke, Inc.
 Facility Name: ABC Coke, Inc.
 Agent Submitting Report: : Mr. Jeff McCord Lab
 Conducting Toxicity Test(s): ERA, 2975 Brown Court, Auburn, AL 36830
 Months To Test: Monthly
 This Report for Toxicity Test(s) Required for the Month of: July
 Scheduled Test(s): Yes X No Accelerated Test(s): Yes No X
 Accelerated Test Number of For Failed Scheduled Test Date:
 Test Type Required: 48 -Hr Acute Screening: -Hr Acute Definitive:
 Short-term Chronic Screening: X Short-term Chronic Definitive:

Test Organism: Ceriodaphnia dubia Test Organism: Pimephales promelas

Sam No.	Date/Time Start	Date/Time Ended	Control Valid	Date/Time Start	Date/Time Ended	Control Valid
1	7/17/18 12:30	7/25/18 11:55	Yes	7/17/18 13:00	7/25/18 14:15	Yes

2.A. SUMMARY OF RESULTS FOR SCREENING TESTS:

Test	Eff.	Test Number											
		(1)			(2)			(3)			(4)

ERA Cooler Receipt Form

1. Condition of Cooler Upon Unpacking

A. Date & Time of Cooler Unpacking 7/17 1150 Receiving Analyst: AE

B. Method of Delivery:

Fed Ex UPS USPS ERA Driver Client Drop Off Other _____
Tracking Number _____

C. Condition of Custody Seal upon arrival: Absent by ERA Driver Present & Broken Present & sealed Present & broken

2. Condition of Cooler Contents

A. Chain Of Custody Information: Completed Incomplete, _____

B. Cooling Process Solid Ice Ice pack Dry Ice None Other _____

C. Packaging Materials: Bubble Wrap None Other: _____

D. Broken Bottles? No Yes If yes, which? _____

E. Temperature °C 1.9 Thermometer ID: Utah Time: 1150 Initials: AE

Reason for incorrect temp: (>6.0°C) Frozen Beginning of Cooling process Ice melted Other _____

3. Sample Information and Verification

A. Sample Numbers match Chain of Custody? Yes No, _____

Correct bottle types used for each sample? Yes No, _____

All samples arrived within holding time? Yes No, _____

B. Were all samples requiring preservation verified & marked on the Chain of Custody? Yes No, _____

C. Samples with preservative have been checked and are in the correct pH range? Yes, no preservatives needed No, see preservative info Not applicable

D. Trip Blanks Absent Present N/A

Additional Preservative information	
1 Preservative Type:	_____
2 Preservative Lot #	_____
3 pH Strip Lot #	_____
4 Date/Time/Initials	_____

4. Comments and Resolutions

A. Was a non-conformance form needed for any samples received in the cooler? Yes No
If yes, Date Started: _____ Analyst: _____

B. Additional Comments: It's assigned @ receipt. to lab

5. Analyst Conformation

The information regarding cooler, chain of custody, and sample receipt is correct and verified by the analyst. If conditions are not met the appropriate actions were taken by the receiving analyst and/or the lab manager.

Sample # 10229-27

ERA Cooler Receipt Form

06/18
BU
PP

1. Condition of Cooler Upon Unpacking

A. Date & Time of Cooler Unpacking 8-7-18/11:04 Receiving Analyst: BU/BS

B. Method of Delivery:

Fed Ex UPS USPS ERA Driver Client Drop Off Other
Tracking Number _____

C. Condition of Custody Seal upon arrival: Absent Present & Broken by ERA Driver Present & sealed Present & broken

2. Condition of Cooler Contents

A. Chain Of Custody Information: Completed Incomplete,

B. Cooling Process Solid Ice Ice pack Dry Ice None Other

C. Packaging Materials: Bubble Wrap None Other: _____

D. Broken Bottles? No Yes If yes, which? _____

E. Temperature °C 3.5 Thermometer ID: Iowa Time: 11:04 Initials: BU

Reason for incorrect temp: ($>6.0^{\circ}\text{C}$) Frozen Beginning of Cooling process Ice melted Other

3. Sample Information and Verification

A. Sample Numbers match Chain of Custody? Yes No, Labels to be made.

Correct bottle types used for each sample? Yes No, _____

All samples arrived within holding time? Yes No, _____

B. Were all samples requiring preservation verified & marked on the Chain of Custody? Yes No, _____

C. Samples with preservative have been checked and are in the correct pH range? Yes, no preservatives needed No, see preservative info Not applicable

D. Hexane Lot for O&G N/A

E. Trip Blanks Absent Present N/A

Additional Preservative information	
1	Preservative Type: _____
2	Preservative Lot # _____
3	pH Strip Lot # _____
4	Date/Time/Initials _____

4. Comments and Resolutions

A. Was a non-conformance form needed for any samples received in the cooler? Yes No
If yes, Date Started: _____ Analyst: _____

B. Additional Comments: _____

5. Analyst Conformation

The information regarding cooler, chain of custody, and sample receipt is correct and verified by the analyst. If conditions are not met the appropriate actions were taken by the receiving analyst and/or the lab manager.

ALABAMA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
TOXICITY TEST REPORT SUMMARY

1. GENERAL:

NPDES PERMIT NO.: AL0003417 DSN: 001 COUNTY: Jefferson
 Permittee: ABC Coke, Inc.
 Facility Name: ABC Coke, Inc.
 Agent Submitting Report: : Mr. Jeff McCord Lab
 Conducting Toxicity Test(s): ERA, 2975 Brown Court, Auburn, AL 36830
 Months To Test: Monthly
 This Report for Toxicity Test(s) Required for the Month of: Sept
 Scheduled Test(s): Yes No Accelerated Test(s): Yes No
 Accelerated Test Number of For Failed Scheduled Test Date:
 Test Type Required: 48 -Hr Acute Screening: -Hr Acute Definitive:
 Short-term Chronic Screening: Short-term Chronic Definitive:

Test Organism: Ceriodaphnia dubia Test Organism: Pimephales promelas

Sam	Date/Time Start	Date/Time Ended	Control	Date/Time Start	Date/Time Ended	Control
No.	MM/DD/YY HH:MM	MM/DD/YY HH:MM	Valid	MM/DD/YY HH:MM	MM/DD/YY HH:MM	Valid

Sample # 183523

ERA Cooler Receipt Form

183524

1. Condition of Cooler Upon Unpacking

A. Date & Time of Cooler Unpacking 9/18/18 1120 Receiving Analyst: AF

B. Method of Delivery:

Fed Ex UPS USPS ERA Driver Client Drop Off Other _____

Tracking Number _____

C. Condition of Custody Seal upon arrival: Absent by ERA Driver Present & Broken Present & sealed Present & broken

2. Condition of Cooler Contents

A. Chain Of Custody Information: Completed Incomplete, _____

B. Cooling Process Solid Ice Ice pack Dry Ice None Other _____

C. Packaging Materials: Bubble Wrap None Other: _____

D. Broken Bottles? No Yes If yes, which? _____

E. Temperature °C 4.6 Thermometer ID: Utah Time: 1127 Initials: AF

Reason for incorrect temp: (>6.0°C) Frozen Beginning of Cooling process Ice melted Other _____

3. Sample Information and Verification

A. Sample Numbers match Chain of Custody? Yes No, Labels to be made.

Correct bottle types used for each sample? Yes No, _____

All samples arrived within holding time? Yes No, _____

B. Were all samples requiring preservation verified & marked on the Chain of Custody? Yes No, _____

C. Samples with preservative have been checked and are in the correct pH range? Yes, no preservatives needed No, see preservative info Not applicable

Additional Preservative information	
1	Preservative Type: _____
2	Preservative Lot # _____
3	pH Strip Lot # _____
4	Date/Time/Initials _____

D. Hexane Lot for O&G N/A

E. Trip Blanks Absent Present N/A

4. Comments and Resolutions

A. Was a non-conformance form needed for any samples received in the cooler? Yes No
If yes, Date Started: _____ Analyst: _____

B. Additional Comments: _____

5. Analyst Conformation

The information regarding cooler, chain of custody, and sample receipt is correct and verified by the analyst. If conditions are not met the appropriate actions were taken by the receiving analyst and/or the lab manager.

RE: Consent Order No. 16-053-CWP
SID Permit No. IU393700329
NPDES Permit No. ALG150072
Dean Dairy Holdings, LLC
Jefferson County (073)

Dear Ms. Dean,

We are submitting this correspondence pursuant to Paragraph F of the referenced Consent Order. We trust this progress report is satisfactory.

SouthWest Water Company ("SouthWest") has substantially completed the upgrades and modifications of the storm water and process wastewater collection system as described in the Compliance Plan. SouthWest, Engineers of the South ("EOS") and Electric Machine Control ("EMC") introduced the remote monitoring and control system capabilities to the Mayfield/Barber's team on October 26, 2017.

The water quality monitoring instruments are measuring pH, turbidity and conductivity in real time and the system can now be remotely accessed. The design team has defined the water quality limits and established alarm conditions when the limits have been exceeded. The automatic closure of the storm water control gates occurs when water quality limits are outside of the established setpoints and alarm notification is sent via text and email to the personnel identified by the owner. Other actions will also occur either automatically or manually depending on the alarm event. A fuel detection device will alert personnel to a potential fuel spill which can be contained in a newly constructed trench drain and a pH probe or turbidity sensor installed in a storm inlet in the Barber's parking lot will cause a pump to transfer flow to a side stream holding tank for offsite removal.

Ms. Glenda Dean
August 10, 2017
Page 2 of 2

The system is currently being tested to ensure that it will respond as intended. Because the system is predominantly measuring storm water run-off (from both onsite and offsite), multiple rain events during our field testing period are desired for the evaluation of the water quality setpoints, the observation of turbidity readings during the first-flush of a rain period and troubleshooting nuisance alarms. During the week of October 30th, the design team will also simulate "spill" events to observe the response of the system.

With all of the physical components of the system complete, we anticipate there will be an additional 2 to 3 weeks of programming and tweaking of the system based on the performance of the system during "stress" tests and rain events. The system should be certified by the engineer of record as complete by mid-November.

Vanguard Environmental Group has completed improvements to the pretreatment facility on behalf of Dean Dairy Holdings, LLC as outlined in the Engineering Report and Compliance Plan prepared by Engineers of the South in July 2016.

Based on the projected work schedule provided by SouthWest Water and their sub-contractors, the work will be completed in accordance with the terms of the Consent Order.

We trust this Consent Order progress report is satisfactory. Should you have any questions regarding this matter, please contact me at 205-943-0361.

Best Regards,

A handwritten signature in blue ink that reads "E. Allen".
